BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 1

PHILADELPHIA
January 3, 1917

As The Editor Sees It

EVERYTHING seems to be going up—building material, labor, the cost of living, gasoline, and, by way of keeping step with the tendency of everything else to do a little ballooning now and then, the cost of building permits is to ascend.

If present prospects hold good it is going to cost the builder on an average about fifty per cent. more this year, 1917, for permission to spend his money than it did last year, 1916.

In other words, the city's financiers have decided that the builders, whose activities do more to increase the borrowing capacity of the city than any other class of men, and who are constantly adding accessible units to its total of taxable values, must pay a higher fee for permits beginning January 1st.

The object is to increase the receipts of the Bureau of Building Inspection, but wouldn't it seem that this might be done in some channel other than by adding to the already high cost of building and placing an additional burden upon men whose operations help the city and its revenues in a material sense.

It might be just as well to remember that it is the builder who is the real provider of revenue in the community of today. Taxes are based on realty and improvements. The builder makes improvements that add thousands of dollars annually to the city's receipts from taxation. He is a valuable and material ally of the budget maker and the city finance manager. It is bad technique, if not poor policy, to add to the burden of the builder who has, under existing conditions, burden enough what, with cut-throat competition, advancing labor and expensive and vexatious delay in delivery of certain classes of material due to European demand.

BY the way, I am advised by Mr. George Howe, chairman of the Exhibition Board, that the Twenty-third Architectural Exhibition of Philadelphia Chapter, A. I. A., and the T.-Square Club will take place at the Art Club, March 7th to 25th, 1917.

The coming exhibition is expected to be one of the most notable of the many that have been held here under the same joint auspices.

In the matter of decorative and artistic accessories, an effort is being made to eclipse all previous records.

* * *

FROM Mr. W. E. Mallalieu, General Manager of the National Board of Fire Underwriters, I am in receipt of certain interesting statistics dealing with the fire situation as it applies to Pennsylvania. These figures, Mr. Mallalieu writes me, are the result of an entirely new line of research inaugurated less than two years ago with the co-operation of the National Convention of Insurance Commissioners and the Fire Materials Association. One of the striking things, in connection with these figures, is the enormous extent of fire loss due to *preventable* causes. These statistics have not before been published.

After collating and analyzing the details of a very large percentage of all fires in Pennsylvania, the Actuarial Bureau of the National Board of Fire Underwriters has ascertained the causes of these fires, for the year 1915, with their relative losses to have been as follows:

(Percentages have not been carried beyond one decimal place.)

STRICTLY PREVENTABLE CAUSES.

Defective chimneys and flues	\$399,152 or 4.0%
Fireworks, firecrackers, etc.	21,503 or 0.2%
Gas, natural and	

artificial	118,102 or 1.2%
Hot ashes and coals	32,622 or 0.3%
Ignition of hot grease, oil, tar, wax, asphalt, etc..	19,629 or 0.2%
Hot or molten metal	8,742 or 0.1%
Matches	191,781 or 1.9%
Open fires	160,257 or 1.6%
Open lights	75,249 or 0.7%
Petroleum and its products	63,856 or 0.6%
Rubbish and litter .	33,301 or 0.3%
Smoking Cigars, cigarettes, pipes, etc.)	192,636 or 1.9%
Steam and hot water pipes	35,483 or 0.4%
Stoves, furnaces, boilers and their pipes	393,031 or 4.0%
Total	\$1,745,344 or 17.4%

NOTE.—In each of the above cases, preliminary inspection would have shown the element of danger, which then might have been easily remedied.

* * *

PARTLY PREVENTABLE CAUSES.

Electricity	\$594,323 or 6.0%
Explosions	156,899 or 1.6%
Exposure	1,338,719 or 13.5%
Incendiarism	332,145 or 3.4%
Lightning	291,296 or 2.9%
Miscellaneous, cause known but not classified	175,997 or 1.8%
Sparks—from fires .	159,886 or 1.6%
Sparks—from machinery	26,773 or 0.2%
Spontaneous combustion	428,258 or 4.3%
Total	\$3,504,296 or 35.3%

NOTE.—It is estimated that at least half of the loss occasioned by electricity, sparks from fires, and spontaneous combustion was preventable, and that all the

other causes had some degree of preventability.

Unknown Causes

(Probably largely preventable) . . . \$4,654,678 or 47.0%

* * *

HERE we have shown a total fire loss of nearly two million dollars in twelve months due to causes every one of which was preventable. In other words we have a property damage of nearly two million dollars due to carelessness on the part of owners or lessees dealing with an easily ascertainable element of fire risk. The most casual inspection would have shown the necessity for action. We have an additional loss within the same period of about three million and a half of dollars due to what the underwriters class as "partly-preventable" causes, such as incendiarism, lightning, explosion, defective wiring, spontaneous combustion, etc., and a loss of more than four million dollars from fires the causes of which could not be traced. A total property loss in one state, Pennsylvania, of approximately ten millions of dollars, probably ninety per cent. of which could have been avoided by the exercise of common business prudence in looking after little details, each carrying its signal of danger. Worth pondering some, don't you think?

* * *

THE year 1916 has been a wonderful year in building. What of 1917 and 1918? Is the tremendous activity of the past twelve months to continue only as long as the war abroad creates a temporary and forced market for American manufacturers, or will this activity continue after the close of that war and show but little abatement? Croakers, here and there, are heard prophesying a sudden slump to conditions bordering on panic following the let-down of this European demand. What of Philadelphia? We asked one of the big men of Philadelphia to give his views as to Philadelphia's future, a man who is an engineer, a financier, a promoter of large enterprises. Let his healthy optimism revive your enthusiasm. Listen to the buoyant, hopeful, sanely-reasoned argument of a man who knows his Philadelphia:

"Philadelphia is going to occupy a unique position among American municipalities during the coming decade. It is going to lead all great American municipalities in commercial business, railroad, shipping, ship building, manufacturing and municipal development.

"At present there are by far too few people in Philadelphia to carry on the work which is already authorized and which must be carried out. The additional people needed to carry on Phila-

delphia's great works will flood into this city as soon as munition plants complete their war orders, and other plants slacken up, and the workers therein are thus relieved.

"Long after business slackens up elsewhere throughout the United States Philadelphia will remain a foremost and most persistently busy center in this country.

"For many years to come we are going to experience a vast yearly increase in population, made necessary for the carrying out of the undertakings already under way or assured.

"Here are the facts:—

"Philadelphia is the center of the ship building industry. We must look at Philadelphia broadly, as not bounded by municipal lines but as including the great area surrounding this City which trades here, and which is as dependent upon the city and a part of this city as the spokes and rim of the wheel are to the hub.

"When we look forward to the tremendous increase in ship building, which is made necessary by the expansion of the American Navy and American commerce, and for the renewal of ships destroyed, and realize that the facilities to the great ship yards tributary to Philadelphia will be taxed far beyond their present capacity for the next decade in carrying on this profitable work, we must also recognize the enormous prosperity which will come not only to the ship building industry but to every industry which follows in its wake,—the marine engine building plants, the ship plate plants, and allied industries. The prosperity which is guaranteed to these allied industries will also extend to those industries which follow in turn in their wake. Furthermore, the effect will be cumulative.

"The great expansion and prosperity which is assured the Midvale Steel Works and the Baldwin Locomotive Works, the Brill Car Works, etc., which will have to meet the demands imposed by an enormous deferred maintenance of railroad locomotives and equipment due, first to unsatisfactory financial conditions up to two years ago, later, to abnormally high prices of steel and steel products, which have caused the railroads to hesitate in making purchases.

"We know that the railroads are going to expend vast sums of money here improving their terminal facilities, and one of these notable expenditures will be a joint expenditure agreed to between the railroads and the city in the removal of grade crossings in South Philadelphia, and the providing of terminal facilities there, at a cost of \$25,000,000.

WE know that the city is committed to expenditure of \$62,000,000 for the construction of subway and elevated railway lines, and that the equipment of these lines will call for an addition expenditure of over \$15,000,000.

"We know that the city is committed to expend \$10,000,000 on new wharves and docks, and that this expenditure, coupled with added railroad facilities, will bring a vast added freight movement by water and rail through Philadelphia, large numbers of ships which will sail to and from this port, and will make necessary purchases of supplies here also.

"We know that the city is committed to the expenditure of nearly \$40,000,000 for the completion of the Parkway, for the building of Convention Hall and Municipal Library, for the extension of the sewage and water systems, and other municipal developments.

"We know that the government is committed to build ships at the Philadelphia Navy Yard.

"These are only a few of the important items which must necessarily lead to the conclusion that Philadelphia's population will soon pass the 2,000,000 mark, and leave that mark far in the rear.

"All these great and municipal developments will employ scores of thousands of additional men in their upbuilding, and their operation will give profitable employment to tens of thousands.

"This great added population of the city, profitably employed, will have an enormous purchasing power which will be reflected in the sales of manufacturing and merchandising houses of all kinds in this city.

"It will bring prosperity all along the line—to the butcher, to the baker, to the grocer, to the drygoods merchant, to the public utilities, and to every financial business interest in this city.

"This added business will call for a large added force to handle it.

"The net result from a building standpoint is that Philadelphia must provide to house several hundred thousand additional people within the next five years. The normal increase in population in this city has been about 25,000 to 30,000 a year, but abnormal conditions are confronting us which guarantee the necessity of a vast increase in housing and business facilities in this city, which thoughtful builders will anticipate, and which will bring unbounded prosperity to all the building trades, as well as vast profits to real estate owners.

"The business man who realizes these prosperous conditions which confront this city, and who anticipates them, is bound to profit."

I WISH I could divulge the name of the man who gave me this statement. He is one of the men who has helped to make Philadelphia; he is a man whose name is always found high up on the roll of any movement undertaken to advance the position of Philadelphia as a center of homes and home advantages. With a modesty that is quite characteristic, he requests that his name be omitted. No man in Philadelphia's commercial or financial life is better equipped to discuss

with authority the city's future. Read his statement carefully. Analyze the facts he marshals to support his views. Let the "New Philadelphia" note of optimism sink into your soul and conscience.

And a Happy New Year to you and a busy and prosperous New Year to you, with a procession of other happy and prosperous years ahead of it stretching off to the new and greater Philadelphia of our dreams.

tic-Marshall Co. will furnish 7,000 tons for the improvements to the plant of the New York Shipbuilding Co. at Camden, N. J. The new Dreier loft building in East 57th street, N. Y., will take 900 tons. The fabrication plants now have orders booked for at least four months in advance, and if the car shortage and freight situation is not relieved in the near future deliveries will be impossible in less than six months' time.

* * *

PITTSBURGH, Dec. 28.—Thirty-two officers and members of the Master Plumbers' Association, a national organization, pleaded guilty in the United States Court to charges of conspiracy to violate the Sherman anti-trust law, and were sentenced to pay fines that aggregate \$5,625.

Members of the association, in session here, are considering a voluntary acceptance of an injunction that will prohibit them from continuing their organization.

The government investigations into the conspiracy began in 1912. Convictions were obtained last fall at Salt Lake City and Des Moines.

Frank Fee, of New York, was assessed the heaviest fine, \$500, and he must pay costs amounting to \$200. Fee, it was testified, directed a campaign against the Thompson-Starrett Construction Company, the object being to put that corporation out of business.

S. Louis Barnes, formerly national president of the association, must pay \$50 fine and \$50 costs. William McCoach, of Philadelphia, formerly national treasurer

EDITORIAL NOTES

Commodity prices continued to skyrocket in spite of the numerous Municipal, State, and Federal investigations either under way or threatened. Bradstreet's Index Number as of December 1, marks a new high level, reflecting an advance of 7.9 per cent. over November 1, and increase of 28 per cent. over December 1, 1915, and 51 per cent. over that of December 1, 1914. So many new records have been established that reports registering new heights are becoming quite commonplace. Investigations evidently do not furnish the solution to the problem and the consumer, who in the final analysis bears the burden, is confronted with the possibility of even greater and more appalling advances in the prices of his commodities.

* * *

Some one has taken the trouble to ascertain that more than 400 kinds of marble are used in construction work in New York City.

* * *

The annual loss through fire in the United States reaches the enormous total of \$225,000,000, without including the loss through prairie fires or marine fires, said the State fire marshal of Minnesota. This means a per capita loss of about \$2.25. If this money could be saved it would be enough to support the entire public school system.

* * *

The National Workmen's Compensation Bureau during the week notified the New York, Massachusetts and Pennsylvania Insurance Departments that the bureau has decided on the basis of an examination of company experience that an immediate revision of the workmen's compensation insurance rates is imperative, and that its manual committee has been empowered to begin the necessary work at once. Further, the actuarial committee has been instructed to make a thorough investigation of, and a revision if necessary, of the methods of calculat-

ing the various State multipliers. The action of the bureau is largely the result of the letter of the New York Department showing that workmen's compensation rates in this State were decidedly inadequate. The proposed revision will include the readjustment of the multipliers of other States on a basis of greater experience than heretofore and affords a satisfactory basis for checking up those multipliers. It is expected that the work will be completed by March 1, 1917.

* * *

If your sidewalks are of cement do not put salt on them to melt the ice during stormy winter weather. The action of salt is detrimental to concrete. In creameries, where salt comes in contact with the floors constantly, it is stated that floors last only a few years. "The salt does not act on the cement, but destroys the gravel and other material and leaves the floors or walks honey-combed, so that they soon break down."

* * *

While the prices of structural shapes have not advanced, the market has been especially active when consideration is given to the number of contracts placed for this material. The week passed has witnessed the booking of important orders for early delivery, orders that total an immense tonnage, particularly for this time of the year. Among the contracts placed during the week are included the order of the American Bridge Co. for 2,600 tons of steel for the construction of the pier shed at Baltimore for the Baltimore & Ohio Railroad, 1,250 tons for the steel work for the five bridges for the Pennsylvania Railroad and 500 tons for bridge construction for the Lehigh Valley Railroad. The plant for the De Laval Separator Co., at Trenton, N. J., will require approximately 250 tons, contracted for by L. F. Shoemaker & Sons; Levering & Garrigues have taken 1,100 tons for the Sheffield Farms-Slawson, Decker Co. plant at Brooklyn; and the McClint-

of the plumbers, was ordered to pay \$100 fine and \$50 costs.

B. F. Durkin, of Philadelphia, was fined \$50 and \$25 costs. Charles Fisher, James H. Lutz, Jr., and Charles K. Will, all of Lancaster, and George W. Gast, of Harrisburg, who are said to have controlled the operations of the plumbers' association in central Pennsylvania, must pay fines of \$100 each and costs of \$50.

Other defendants and their fines are: Richard Turner, Wilkes-Barre, \$100 fine, \$50 costs; Fenton T. Evans and Charles L. Titus, Uniontown, \$100 fine and \$50 costs; Harry L. Burd, Uniontown, \$50 fine and \$50 costs.

* * *

Another allotment of \$2,500,000 toward the construction of the proposed high speed transit lines and the improvement of the port will be made in the \$12,774,200 loan, which is to be sold to the highest bidder at Mayor Smith's office, Janu-

ary 8. The additional allotment for transit and port improvement makes \$5,000,000 of the \$67,000,000 loan to be floated for such work.

The \$12,774,200 is part of the big loans, aggregating \$114,525,000, which were recently authorized. Several months ago the first installment of these loans, amounting to \$10,000,000, was floated. With the installment of \$12,774,200 sold, there will remain \$91,750,800 of them still to be negotiated.

* * *

Effective January 1st, the Lehigh Portland Cement Company announces the removal of its Philadelphia office to 1301 Finance Building, South Penn Square. B. L. Snett, Eastern Sales Manager, makes the announcement in a neat card expressing his appreciation of the many favors shown him by Philadelphia customers and pledging a continuance of the Lehigh Company's co-operation and service.

THE TREND OF PRICES OF BUILDING MATERIALS

Among architects and others interested in the cost of building, the actual situation in the construction field is not always entirely understood, and at the present time particularly the percentages of increase in prices of materials that have taken place since the effect of the war in Europe has been felt in this country, are being quoted by architects to their clients in the most general terms, due apparently to a lack of definite and specific information.

It is of interest to note that in spite of the fact that during the past year and a half prices of building material have been steadily increasing, the plans filed for building operations indicate that in general a greater volume of work has been going on during that period than when prices were normal. Of course, consideration should be given to the fact that a large percentage of the permits granted never proceed further, or are delayed by a variety of causes, so proper allowances must be made when estimating the amount of building that will be done within the current year. At the present time, there is far from unanimity of opinion among manufacturers and dealers in building materials regarding the price situation in the building field: some claim that when the war ceases prices will drop because in their opinion the principal stimulus to our present expansion has been due to this cause, while others declare that as long as the cost of labor remains high the market will hold firm and little can be expected in the nature of a decline.

Before reviewing the market on building materials, it may be of interest to glance at the figures for operations during the past few

months. Permits for May covering seventy-seven of the principal cities show the largest amount of proposed work for any single month during the history of our country, the total aggregating \$106,433,902. The closest approach to this record was in April of 1912, when the amount nearly touched the million dollar mark. From figures compiled for the month of June covering sixty-four of the cities, the total reaches \$76,739,283, which compares most favorably with the previous month's report, when the fact is considered that reports from thirteen cities were omitted.

Without doubt the most noticeable advances have been made on various steel products. Such suddenly increased demands were brought about by the European war that prices rapidly rose, and in comparison with a year ago in most instances have about doubled. For structural material in July of 1915 the Pittsburgh mill quotations ranged from \$1.25 to \$1.30 per 100 pounds, while from warehouse in New York prevailing prices were \$1.95 to \$2.00. To-day from mill, Pittsburgh, \$2.50 to \$2.75 is asked for ordinary shapes, while plates bring from \$3.00 to \$3.25. In New York prices on structurals are firm, at \$3.25 to \$3.30, while \$4.00 is asked for plates. From warehouses in St. Louis the price is \$3.43; Chicago, \$3.10, and San Francisco, \$4.25. The change in quotations on this material has added millions of dollars to construction work in New York, the City of New York itself having several million dollars added to its bill for the construction of subways.

The industrial expansion in this country,

due largely to war business, brought with it the requirement of more buildings and steel was in such a demand that it was oftentimes sold at a good premium. Conditions are now more favorable for furnishing the increasing supply. The capacity of mills having been increased, manufacturers are now in a better position to cope with the demands and within the past month prices on some shapes have eased off.

On concrete reinforcing bars the same condition applies. From mill shipments for $\frac{3}{4}$ -inch sizes, \$2.50 per 100 pounds is asked, and from New York warehouse the price is \$3.10. In St. Louis \$3.24 is quoted; Chicago, \$3.10; San Francisco, \$4.00. A year ago this time $\frac{3}{4}$ -inch size from mill were \$1.25 per 100 pounds, and from warehouses, New York, \$2.05 was quoted.

With the large demand for structural steel it naturally follows that an advance on rivets would take place, as both are used for one purpose. At present per 100 pounds, f. o. b. Pittsburgh, $\frac{3}{4}$ -inch structural steel rivets sell at \$4.00 per keg. In New York they are \$5.25; Chicago, \$3.50; St. Louis, \$3.55; San Francisco, \$5.40.

Plain wire nails per keg in carload lots are \$2.50 to \$2.60, f. o. b. Pittsburgh; for galvanized one inch and longer, \$4.50 to \$4.60 is asked, and shorter galvanized \$5.00 to \$5.10. In New York wire and cut nails sell at \$3.15; in Cleveland, at \$3.05, and Chicago, \$2.85.

Steel sheet piling from mill pittsburgh sells at \$2.50 per 100 pounds, while one year ago it could be had at \$1.60.

Portland cement per barrel in cotton bags for carload lots sells at \$1.72 in New York, while a year ago \$1.33 was the prevailing price. In Boston it is \$1.92, as compared with \$1.56 a year ago; Chicago, \$1.81, against \$1.51 of last year. The demand for this material has also been excessive, not alone for building construction, but for engineering projects in general.

For gravel the quotations current at this time are as follows: $1\frac{1}{2}$ -inch in New York sells at 90 cents per cubic yard for carload lots and \$1.00 for $\frac{3}{4}$ -inch. In Chicago the price is 85 cents for both the former and the latter, and in St. Louis 70 cents. In San Francisco it is sold at 75 cents per ton.

For sand at the banks the quotations are as follows: New York, 50 cents per cubic yard; Chicago, 85 cents; St. Louis, 60 cents, while in San Francisco it is 75 cents per ton. These prices are for cargo lots. In the past year an advance has been made of about 10 cents, which was brought about principally by labor difficulties and scarcity of carriers.

For crushed stone in New York $1\frac{1}{2}$ -inch sells at 85 cents to 90 cents, $\frac{3}{4}$ -inch at \$1.00. In Chicago at \$1.10 and St. Louis \$1.00.

"These prices are per cubic yard for carload or cargo lots. In San Francisco it is \$1.75 per ton. Dealers and supply men in this line have also had considerable difficulty owing to freight congestion, shortage of

Barrett Specification Roofs

This is the Bond
that guarantees your
roof for 20 years.

Office Building of Nashville, Chattanooga and St. Louis Railroad, Nashville, Tenn.
The owners are protected by the Barrett 20-Year Guaranty Bond.

Why We Can Afford To Give a 20-Year Guaranty

MANY people have asked: "How can you afford to give a 20-Year Guaranty on thousands of roofs all over the country laid by hundreds of different local roofers?"

Well, the answer is simple.

First, We know the materials are right because we manufacture them.

Second, The Barrett Specification, while it may seem complex to a layman, is straightforward, plain-sailing to experienced roofers.

Third, Under the guarantee plan the roof must be constructed under our supervision and receive our O. K. both as to materials and workmanship.

We further know from 50 years' experience that a Barrett Specification Roof, properly laid, will last a good deal longer than twenty years, *without maintenance or repairs.*

A Barrett Specification Roof is constructed of five plies of Specification Felt, with a liberal quantity of Specification Pitch (the greatest waterproofing material known) between each layer.

A Copy of The Barrett 20-year Specification, with roofing diagrams, sent free on request.

No other type of roofing approaches a Barrett Specification Roof in the amount of protective waterproofing material used in its construction.

The weight of this waterproofing is not less than 235 lbs. to 100 sq. ft. compared with 75 to 125 lbs., at most, in other types of roofs.

And on top of all this waterproofing material is laid a wearing surface of gravel, slag, tile or vitrified brick.

That's why it lasts. That is why we can safely guarantee it for 20 years.

The 20-Year Guaranty is now given on all Barrett Specification Roofs of 50 squares and over in all towns in the United States and Canada with a population of 25,000 and over, and in smaller places where our Inspection Service is available. Our only requirements are that The Barrett Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

We believe the broadness of the proposition is without parallel, not only in roofing, but in the whole building industry.

Contract awarded to Harry R. Rust, 724 Ludlow street, Philadelphia.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

The chap who bags the glittering prize
Is the fellow who learns to advertise

GRAHAM-CAMPION CO. *Building Construction*

That Satisfies Architects and Owners

Manufacturing building, 211-13 Chancellor street, \$750. Penna. Co. for Ins. on Lives and Granting Annunities (O), 517 Chestnut street. John Duncan (C), 920 Walnut street. Repair fire damage.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

The finest automobile will not run when the tank is empty, and the finest space can not pull unless it is filled with copy that grips interest.—"Printer's Ink."

(Continued from page 862.)

barges and boats, and labor troubles. This condition aided in maintaining the firm price.

On common red brick current prices for carload or cargo lots are as follows: Common in New York sells at \$8.00; Chicago, at \$6.25; St. Louis, \$6.00, and San Francisco, \$10.00. The selling price a year ago in New York was in the neighborhood of \$6.00. The better grades of face brick bring from \$18.50 up.

Architectural terra cotta is generally quoted from specifications and has advanced in sympathy with other types of exterior building materials.

Ornamental work in iron, stone, etc., has increased in cost because of rising costs in labor and manufacture. Prices have been advanced, but are holding steady.

The lumber market has been in such an unsettled condition, representatives in New York in most instances refuse to furnish prices unless specifications are submitted. The demand has been exceptional despite the conditions.

For hollow tile the prices have remained rather stationary, although in the past few months some advances were absolutely necessary, due to labor conditions. At present in New York 4x12x12-inch sells at \$0.054; Chicago, at \$0.064, and San Francisco, \$0.08. For fireproof partition blocks are quoted as follows: 2x12x12-inch, at \$0.046 in New York, \$0.024 in St. Louis; Chicago, \$0.041, and San Francisco, \$0.055. For larger sizes about the usual variations would occur all along the line.

Clay drain tile per 1,000 feet sells as follows: In New York 3-inch sells at \$22.50, 4-inch at \$32.50, 5-inch at \$47.50, 6-inch at \$57.50, 7-inch at \$97.50. In Chicago 3-inch sells at \$15.00, 4-inch at \$18.00, 5-inch at \$23.00, etc.

From the foregoing it is evident that the prices on building materials to-day are as high as they ever have been. The steel market has never been more active. Some subsidiary companies of the corporation report that if no orders were forthcoming they would be kept busy six months into the year 1917. The one serious situation that confronts manufacturers and supply men is the shortage of labor. Skilled and common labor is almost unobtainable, both classes being well occupied. Immigrants arriving in this country are of a poorer grade than formerly, the better men being forced to remain on the other side for possible use in the army. Wages have advanced in all cases and even at the advance it is hard to hold good men for any length of time. Strikes have been prevalent in all lines of work, the result of which has been that employers have been generally forced to increase their labor costs.—Courtesy of "The American Architect."

TRADE NOTES.

The Master Builders' Association of New Jersey held its December meeting in Newark. The members heard encouraging reports from various sections indicating that building activity would continue brisk, at least until the customary spring rush starts. The compensation laws and other subjects were discussed, and arrangements were made for the next State convention, to be held in January. New by-laws providing for an annual convention and election of officers in the second week of March each year were adopted.

Cass Gilbert, now at 11 East Twenty-fourth street, New York City, has leased the top floor of the new building at the southwest corner of Madison avenue and Thirty-eighth street, just completed by August Heckscher.

Louis Sonntag, chief draftsman of the Board of Education, Newark, N. J., has been appointed temporary architect for the department, to fill the position vacated by the death of Ernest F. Guilbert, School Architect.

Joseph M. Tilden delivered a lecture on December 22 at the Tottenville, S. I., School, on the "History of Architecture As Seen in New York City."

STRUCTURAL SERVICE A. I. OF A.

The Structural Service Department of the American Institute of Architects, which will make its debut in the January issue of the Journal, promises to be of great benefit to all interested in building. The work will not be confined to the staff workers, but will be the result of co-operation from individuals, governmental departments, societies, associations and other potent allied agencies.

This great fund of information will give a complete resume of all governmental, professional, technical, commercial and industrial activities concerning the art and science of building. In doing this an attempt has been made to separate the construction of a composite building into twelve stages of progress—one to be issued each month during the year in the Journal.

The Structural Service Department is offered as a solution or an outlet, through the Journal of American Institute of Architects, as the one logical medium for a centralized source of information.

ENCOURAGING ART IN PITTSBURGH.

Pittsburgh has organized the "One Hundred Friends of Pittsburgh Art," the purpose being to encourage local artists and stimulate knowledge of art in the public schools. Members pledge themselves to give \$10 a year for five years. The idea is to use this money to purchase pictures from local exhibitions and then present them to the various schools.

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

TO REPAIR INDEPENDENCE HALL

Contracts Awarded for Minor Repairs Preliminary to the Larger Work of Restoration—Prototypes of Lamps in Square Probably Invented by Benjamin Franklin.

Preliminary to the extensive alterations and improvements to be made in Independence Square and the restoration of Independence Hall, Director Datesman has awarded some minor repair contracts. New roofs and repairs are to be made to the sections over the wings and arcade, at a cost of \$5,000. The contract was awarded to E. Clifford Durrell. A new floor covering is to be placed in Independence Hall, the contract for which was awarded to Heaton & Hood, for \$896. The abandoned lighting scheme for the Square has been revived. Five years ago Councils appropriated \$60,000 for the purpose of erecting a memorial lamp for each signer of the Declaration of Independence, but the money was allowed to merge and the lighting plan abandoned.

Recently Councils authorized the expenditure of \$2,000 for the preparations of plans and specifications by Philadelphia Chapter of the American Institute of Architects, whose members have agreed to give their services free to plan the complete restoration of Independence Hall, Old City Hall and the other portions of the buildings similar in manner to the rehabilitation of Old Congress Hall, which was completed two years ago.

Patterned after an old lantern, recovered from a dump pile, the new incandescent gas lamps surrounding Independence Hall constitute another step in the restoration on strictly historic lines of the birthplace of the nation. There is to be no delay in carrying forward the work of restoration to completion.

The Philadelphia Chapter, American Institute of Architects, is making researches and preparing plans for the restoration of the old City Hall, at Fifth and Chestnut streets. This work will be carried out as soon as the plans are approved and will complete the restoration of the entire group of buildings.

John W. Patten, of this city, who found the old lamp and offered it to the Historical Society as a relic, in a letter to the secretary, John W. Jordan, explained how he had accidentally picked it up. He said:

"Would you care to have a lantern which once hung in front of the State House, there being one between each window? This is, I believe, the only one now preserved, as I picked it out of a pile of refuse to be carted away to a dump pile."

The form of the lantern, Mr. Sellers said, was undoubtedly due to Benjamin Franklin. He said he had found in the writings of Franklin a description of the lamps first used in Philadelphia for municipal lighting. Franklin wrote that they were supplied from London and consisted of a cylinder of glass with

a metal hood, but without provision for ventilation from below.

The globes soon darkened, however, and made the lamps ineffective and it was necessary to clean them daily. With a view to improving the Philadelphia lamps Franklin suggested that in place of these globes they be "composed of four flat panes, with a long funnel above to draw up the smoke and crevices admitting air below to facilitate the ascent of the smoke." "By this means," Franklin said, "they were kept clean and did not grow dark in a few hours as the London lamps do, but continue bright until morning, and an accidental stroke would generally break but a single pane, easily repaired."

In approving the adoption by the city of the Franklin style of lamp, Mr. Sellers said that besides being appropriate to the surroundings in Independence Square this original form of post and lantern have an interesting historical significance.

ARCHITECTURAL LEAGUE COMPETITIONS.

The Architectural League of New York announces the competitions to be held under its auspices during the season of 1916 and 1917 for the Henry O. Avery prize for sculpture, and a special prize of \$300 for the best design submitted by an architect, sculptor and mural painter in collaboration. The conditions governing the competition as announced by the committee, A. Stirling Calder, chairman, and W. Symmes Richardson and Jules Guerin, are as follows: The subject will be a triumphal arch commemorating the Renaissance of Peace, to be located in a public square of a large city formed at the intersection of wide avenues.

Competitors to be eligible for the award must submit a model in color to be rendered at a scale of three-eighths of an inch to the foot, to represent the combined work of the architect, sculptor and painter, and also a rendered plan at a scale of one-sixteenth of an inch to the foot, showing the arch, the square in which it is to be placed, and the approaching avenues. The judgment of the Committee of Awards will be based on the effect of the design as a whole, and the degree of successful collaboration of the competing groups.

The Avery prize will be awarded on the sculptural element in this program, and the awarding of the collaborative prize will render the work of the collaborating sculptor ineligible therefor. The competition will be governed by the general rules governing competitions, and the award will be made by the Committee on Competitions and Awards, who will constitute the jury.

TRAUBLES OF BRITISH BUILDERS.

At the half-yearly meeting of the National Federation of Building Trades Employers of Great Britain and Ireland, it was unanimously resolved that the "Board of Trade be petitioned to seriously consider the inflated prices of all building materials, with hopes that his Majesty's government will take steps to remedy this hardship."

Considerable time was devoted at this meeting to the discussion of the condition of the apprentices in the building trade whose time and service had been disturbed by the war. It was pointed out that difficulty would be encountered at the end of the war when young men came back who were too old to be apprentices and were not sufficiently skilled to be journeymen. It was suggested that the trade unions should be consulted as to a readjustment of their rules regarding the age of apprentices, so that men returning from the front who might be willing to become apprentices might not be prevented from so doing on account of their age.

BUILDING RECORD.

The preliminary returns of November building permits and expenditures given in Bradstreet's Journal (118 cities reporting), showing, as they did, a decrease in permits but a small gain in value of building as compared with a year ago, were quite close to the real facts, as shown by later, more detailed and numerous returns. With 152 cities of the United States reporting, the total number of permits is found to be 21,410, and the expenditures aggregate \$70,678,968, a decrease in permits from November a year ago of 6.8 per cent., but a gain in expenditure of 3.3 per cent.

Of the 152 cities reporting, eighty-seven, or about 57 per cent., show gains over a year ago, but that group, the southwestern, southern and far-western groups all show gains in expenditure. Most of the larger cities show gains, but New York, Chicago, Minneapolis, Baltimore and Boston show decreases, and the large volume of the normal building at those cities affects percentage of expenditure as a whole.

For the eleven months ending with November expenditures aggregated \$921,499,099, a gain of 20.3 per cent. over 1915, and the prospects are that the year's total building at 152 cities will be little below \$1,000,000,000, an increase of one-fifth over the preceding year, and, therefore, the premier period for building expenditures. It needs to be remembered, however, that permits themselves will probably show only a small increase for the year, not much in excess of 2 per cent., in fact, and this with the known facts as to increased cost of wages and material make it look as if the bulk of the gains shown in expenditures this year over some others will be found to be due to higher costs rather than really greater building activity.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 2

PHILADELPHIA
January 10, 1917

As The Editor Sees It

VERIFYING a prediction made by THE GUIDE, early in the present year, 1916 goes down into history as the greatest year for building activity that Philadelphia has ever known. According to official figures, compiled by William Gamble, statistician to the Philadelphia Bureau of Inspection, the estimated cost of all buildings for which permits were issued was \$49,896,570. This expenditure covers 15,613 separate operations for which were issued 8838 permits. In 1915 the total was \$39,441,125 and the number of operations 17,723. The nearest approach to 1916, which breaks all known records, was in 1909, when a total expenditure was recorded of \$42,881,370, representing the cost of 17,294 new structures.

In commenting on the summary of the year, William S. Gamble, statistician of the Bureau of Building Inspection, declared that the year just closing was remarkable in many ways from a building viewpoint.

Builders were confronted with the high cost of materials and the scarcity of labor," he said, "Despite this handicap, they went ahead with their dwelling operations or other big projects. The year was the banner year for builders and architects, but from present indications the coming year will be unusually active.

"A feature of the year's building operations was the record number of two-story dwellings, 7204. two-story houses being erected at a cost of \$17,766,375. But by far the greatest activity of the year was reflected in the unusually large number of manufacturing buildings erected. To meet the unprecedented influx of orders from all over the world, industrial concerns built new and large quarters, enlarged their buildings, remodeled existing plants and purchased sites for new factories. It is estimated

that more than \$25,000,000 was put into factory construction of all kinds.

* * *

THE estimated cost of all buildings for which permits were issued in the month of December was \$5,460,865. In comparison with last month this is an increase of \$1,008,940.

The following table shows the number of permits issued, the character and total cost of all work during the year.

Operations	Operations	Estimated Cost
Dwellings, 1 story ..	4	\$10,000
Dwellings, 2 story ..	7,204	17,766,375
Dwellings, 3 story ..	516	2,999,315
Dwellings, 4 story ..	2	19,200
Dwellings, frame	28	76,525
Tenement houses ...	4	1,290,000
Rooming houses ...	4	29,000
Stables	36	97,335
Manufactories	102	5,515,590
Workshops	88	349,315
Garages	878	1,307,340
Office buildings	36	1,867,690
Stores	72	1,569,365
Warehouses	54	2,881,215
Engine and boiler houses	16	224,150
Churches	19	650,270
Schools	21	1,443,125
Halls	3	73,300
Municipal buildings.	8	224,300
Hotels	2	1,360,000
Hospitals	3	868,000
Convent	1	65,000
Powerhouses	5	126,500
Clubhouses	2	6,000
Bank buildings	2	300,000
Parish buildings	2	51,000
Library	1	45,000
Place of amusement	1	82,000
Miscellaneous buildings	202	252,965
Additions	1,546	5,550,290
Alterations and repairs	2,846	2,218,160
Miscellaneous work.	1,443	332,450

Heaters	266	166,315
Fire-escape	51	30,655
Signs	145	47,925

Totals 15,613 \$49,896,570

According to the etimated cost of the work, the year 1916 was the largest in the history of the Bureau of Building Inspection, which means the greatest building year that Philadelphia has ever seen.

* * *

ALITTLE talk on "Building Estimates," in the December number of *Architecture and Building*, is marked by some carefully reasoned if homely common sense.

"Placing a building contract with the lowest bidder may seem to many a good stroke of business and a money saver," says the author, Edward J. Kuegeman.

"Many home builders can testify that on the contrary it has been a very costly experience. Lot owners deciding to build should first inform themselves about the building laws and the obligations they assume when letting a building contract to an irresponsible person. They might learn that if labor remains unpaid, or building material used in the construction of house is not paid for, labor and material liens will compel them to pay or their lot and the house will be sold to satisfy the liens.

"It makes no difference if the builder has already received the full sum that he contracted to build the house for—the owner must pay all unpaid labor and material bills. Common sense and good business judgment should prove to every one that when an irresponsible builder or a carpenter who usually works for wages offers to build a \$5,000 to \$6,000 house for \$1,500 less than other builders of good standing there is something wrong.

"The irresponsible builder has nothing to lose and is always assured of good

wages and a good profit. He can name almost any price to secure the job and put it so low that no responsible concern can compete. All he wants is the contract. He can soon enough get cash advanced to take care of his profit and wages.

If, before the house is completed, the lot owner finds that he has already paid out as much as the finished house was to cost him, the shoestring contractor explains that he made a mistake in estimating—forgot to figure the doors or the windows or an entire floor, etc.—that no one could build a house for that price and that he will do his best to complete it as cheaply as possible. If the owner turns it over to some one else it costs him still more money.

"The lot owner has absolutely no recourse and protection, for the builder has no financial responsibility and is practically judgment proof. Consequently he is compelled to put up the necessary additional money to complete the job and the \$3,500 house costs \$5,000, and is perhaps a poor job at that.

"The only way an owner can protect himself against these irresponsible contractors who explain their ability to figure so low a price because of their having no overhead expenses, etc., is by demanding a builder's bond. This might eliminate this class of bidder, but if the bond were furnished, it would protect the owner against liens and would guarantee him the fulfillment of the contract as per specifications for the stipulated price.

"It is, therefore, of the utmost importance to every one who desires to build that he demand a building bond from any contractor of whose financial standing he is not absolutely sure.

"It is not so much a question—Who will make the lowest bid? as "What is the real value the finished house will represent? What is the workmanship and material that is going into it? Will the completed house be delivered for the contract price?"

* * *

IT is hard to believe that any reasoning person, outside of the rural sections, still needs to be convinced of the wisdom of having a new house designed by an architect instead of, following an ancient custom, built by a "practical" builder. But if any such obstinate person does exist one of the many arguments for the employment of an architect is to be found in the added sale value this fact gives a house when it is up for disposal. Real estate men say it is common for them to get, for country houses designed by architects of repute, anywhere from \$2,000 to \$5,000 more than homes, of the same size, lacking this qualification, are able to command. It

isn't altogether a question of better planning that gives the architect-designed house this extra value. Nor is it infallibly a question of better design. It is more frequently that combination of the two which spells "taste." If you doubt this at all compare the finest "practical builder" designed country house in your locality with the poorest architect-designed house in the same vicinity. One as notably lacks as the other possesses this elusive quality of good taste. The architect learns to key his proportions to the dominant motif, musically speaking. Everything is in harmony with everything else. The decorative scheme, however simple and unostentatious, is endowed with grace, relevancy and a certain compatability. It escapes the tawdriness, the bourgeois quality, of the house planned by the man who has not had this advantage of artistic training. And as most buyers are people of a certain average of discernment and are instinctively attracted to the house which shows inward and outward evidences of correct and intelligent planning the home designed by the architect sells at a premium over that which is carpenter-built.

* * *

ALTHOUGH 1916 takes its place in the annals of building as a year of unparalleled activity, there are pessimistic persons, here and there, who affect to see in the rising cost of labor and materials a disturbing factor in any flight of prophecy which aims to forecast the future. Such a croaker is a writer who signs himself "Builder" in the *New York Real Estate Record*. Here is his plaint:

"That the outlook for new fireproof construction in 1917 is very dubious is evinced by the dearth of plans filed for such work. The deterrent factor is the enormous increase in the price of building material.

"As an instance of this increase: A figure of \$6,500 for the steel and fireproofing in a building 25 x 75, submitted in November, 1915, is resubmitted today at \$13,000. This difference alone would be a handsome profit on the entire transaction (land and building).

"Another case of where the excessive increase in materials has put the kibosh on a proposed operation is illustrated in the increase of \$57,000 in 1916, over the \$99,000 cost of a duplicate building erected in 1913, when prices were normal.

"Unless prices take a sudden drop in the immediate future, the volume of building in 1917 promises to be exceedingly small."

* * *

THERE is an old fable about a good housewife who found herself the owner of a goose which laid golden eggs. But as the goose did not lay them

fast enough or numerous enough to please the exacting dame she hit upon the expedient of killing him and extracting at one swoop his entire stock of glittering goose-fruit. The outcome, as you may guess, was that she found herself minus both goose and eggs. Can "Builder" be right in his reasoning? Are building costs to advance to a point threatening the supply of golden eggs?

* * *

MANHATTAN is busying itself with another more or less acrid discussion of the question of roof signs. It seems that an effort is being made by certain interests to secure the amendment of the existing ordinances dealing with this subject.

In the opinion of the Real Estate Board of New York these amendments are not in the best interests of the city and the Board's Committee on City Ordinances has been instructed to oppose the ordinance at the hearing. The changes would, in brief, make it possible for roof signs on fireproof buildings to be constructed to *practically any height that the sign owner might elect*.

More than a year ago the ordinance relating to roof signs and ground signs was thoroughly amended. The amendments at first proposed laid great emphasis on what were considered by its drafters to be the aesthetic requirements of the situation. The Board at that time was not in favor of the first proposed amendments because in many particulars they entirely disregarded the plain rights of property owners.

The ordinance in its present form represents the result of numerous conferences between public officials, the Real Estate Board, civic and other organizations, and was passed after a very thorough consideration of all the circumstances surrounding the erection and maintenance of signs.

This ordinance has worked well for more than a year. Public sentiment is, if anything, against less rigid provisions. The Real Estate Board believes that the ordinance should be retained in its present form and that the proposed changes are unwarranted and against public policy. This same attitude was taken at a recent conference at which representatives of the Citizen's Union, the City Club of New York, the Fifth Avenue Association and the Real Estate Board of New York were present.

* * *

THAT real estate men are at last becoming alive to the fact that it pays to keep idle property attractive, if the object is to sell or rent, is instanced by a set of "New Year Resolutions" printed in *Realty*, the progressive Newark (N. J.) real estate monthly.

"RESOLVED:" runs this set of reso-

lutions, "That we will keep the weeds, old cans, cast-off paper, odd pieces of lumber, and scrapheap off all our real estate wheresoever situated, to the end that a neighbor's right to live decently may continue unto him without unlawful abridgment and inhuman disregard.

"That we will plant trees upon our idle property and keep the grass fairly short, or cultivate it to some useful purpose in floral or vegetable husbandry.

"That we will at last discover that a neat, freshly painted, artistic sign upon vacant property makes for beauty in a neighborhood and enhances the impression of value which we desire our property to convey.

"That we will clean up and paint the house and business buildings of our whole community because it increases values, insures sanitation, denotes civilized progress and keeps the bugs off our assets.

"That we will carry on a crusade against all undesirable property owners who show signs of senile irresponsibility by neglecting their property within and without. To hog the income from property at the expense of its upkeep, cleanliness and appearance pretty nearly discloses such an owner.

"That we will take a real, active and, if necessary, a militant interest in our city, its management, taxation, civic and aesthetic life. May our properties go to the demnition bow-wows if we fail in this patriotic resolve!

"That we will remove every pill and other unsightly advertising sign from the farm buildings of properties on our list, as a condition precedent of their sale to our clients. Also that we will propagate the belief that a farm made ugly by such signs becomes unsalable and that the farmer who commits this offense thereby advertises his own thriftlessness.

"That we will leave more white space in and around our advertisements, for it often hath even a louder voice than type—in a wilderness of printer's ink.

"That we will adopt the great principle of co-operation in our business and not set trap-guns for each other.

"That we will undertake in a substantial manner to remedy those ancient evils in our business which have made personal property salable anywhere in a moment and real estate unsalable nearly everywhere without great pains and long labor.

"That we will so organize nationally, and conduct our business individually, as to invest a new stability in real estate of every description, and win for it the financial market which has for many years been devoted to gambling in stocks and bonds."

* * *

AND by the way we wish that the builders of Philadelphia, and elsewhere, efficiently organized, could adopt just five of the planks in this platform of policy and live up to them. What a great thing it would be for the trade!

J. S. Donal, representing the city of Philadelphia.

* * *

Philadelphia, the birthplace of many co-operative advertising campaigns in the newspapers, saw another newcomer recently—an educational campaign on life insurance conducted by the Philadelphia Association of Life Underwriters. Smaller cities have been conducting campaigns of this sort for several years, but Philadelphia is probably the first city of the first-class to undertake a campaign of this sort. The advertising is being written and placed by Theodore E. Ash. The Philadelphia campaign is local in scope and is intended not only to sell life insurance, but to establish confidence in life insurance men and encourage all of its life underwriters in Philadelphia to join the campaign. The copy is unique in that it strips life insurance of its technicality and depends on human interest to convince the reader.

* * *

One of the greatest increases in realty values ever made in the central section of Philadelphia and among the largest for any other section of the city was made for 1917. Reflecting the city's growth and the remarkable number of central improvements, more than \$8,000,000 was added to central realty. This increase was made notwithstanding a deduction of \$1,000,000 for properties acquired by the city for the Parkway. Assessments in some cases, as for example the Larkin Building, Twenty-second

EDITORIAL NOTES

As this issue of THE GUIDE goes on the press a testimonial dinner is in progress at the Hotel Rittenhouse to George Watson of the Philadelphia Master Builders' Exchange. The dinner is given by the Campaign Committee of the Exchange, which handled the very successful membership drive in that organization earlier in the year, and is meant to emphasize the Committee's recognition of the valued services rendered therein by Mr. Watson, who was one of the most tireless workers in the movement to enlarge the membership roll of the Exchange. The committee which arranged the dinner consisted of Jacob L. Tyson, W. Nelson Mayhew, J. T. Talley, O. W. Ketcham, F. M. Harris, Jr., Harold Smith, E. E. Hollenback, I. Roy Griffith, C. F. Shellenberger and Benjamin K. Nusbaum, Chairman.

At a meeting of the Special Port

Committee held in the Foreign Trade Bureau of the Chamber of Commerce on December 18th, representatives of the Railroads, the City of Philadelphia and the Philadelphia and South American Steamship Company, arranged to begin at once the work of canvassing all manufacturers of Philadelphia and vicinity for the purpose of ascertaining what interest they had in export business and to gather all possible statistics, with the view of bringing new steamship lines to the port of Philadelphia.

The gentlemen present were: Mr. H. K. Mulford, Chairman; A. J. Ball, Foreign Trade Agent for the Pennsylvania Railroad; Mr. R. S. Merkel, who will represent the Pennsylvania Railroad in this solicitation; Mr. J. W. Klink of the Reading Railroad Company; Mr. G. Alan Sheain of the Baltimore and Ohio Railroad; Mr. J. D. Bennett, Philadelphia and South American Steamship Corporation and Mr.

ond and Arch Streets, were boosted 100 per cent. But the advance in values was mostly distributed over large buildings which have just been begun or completed.

* * *

Among these is the apartment house at Fifteenth and Locust Streets, which is assessed at \$700,000; the loft building at Ninth and Sansom Streets, at \$600,000; the office buildings at Sixteenth and Sansom Streets and at Sixteenth and Walnut Streets, assessed as unfinished structures at \$500,000 each; the new Franklin National Bank Building on Chestnut Street west of Board, at \$1,500,000; the large warehouse and distributing station being built by John Wanamaker at Twenty-fourth and Walnut Streets, assessed as unfinished at \$600,000; advances in the taxable valuation of the unfinished apartment house at Nineteenth and Walnut Streets, the Logan Trust Company Building on Chestnut Street west of Broad, the new Widener Building at Chestnut and Juniper Streets, the Hale Building at Chestnut and Juniper Streets, which was remodeled.

* * *

The new building of Felton, Sibley & Company, on their old site at 136-140 North Fourth Street, corner of Cherry, is now completed.

The building is a Colonial fire-proof, six-story structure and contains every up-to-the-minute device for manufacturing and shipping.

The first floor is devoted to the packing and shipping rooms. The general offices and private offices are on the second floor. The grinding mills are also on this floor.

A new electric power plant supplies current for the entire building, and all machines are driven by individual motors.

Particular attention has been given to the latest devices for the rapid and economical handling of shipments.

The new building will give this old and well-known firm largely increased facilities and enable them to take care of their constantly increasing business.

* * *

Philadelphia's foreign trade covering the period of the twelve months just closed totaled approximately \$441,000,000, breaking all previous records.

Exports totaled approximately \$330,000,000 exceeding by nearly \$200,000,000 those of 1915, the previous record-breaking period, and by nearly \$225,000,000 the only other period in the history of the port of Philadelphia when the value of the exports reached the \$100,000,000 mark.

Imports during 1916 also touched the

highest figures in the history of the port, approximately \$111,000,000, an increase of \$41,000,000 over the value of imports during 1915, and \$18,000,000 greater than those of 1912, the previous high record for the port.

* * *

Andy Brann, sixty-seven years old, for fifteen years the senior member of Brann & Stuart, engineers and contractors, with offices in the Commercial Trust Building, died suddenly at his residence, 1625 North Sixteenth Street.

Mr. Brann, who was born in Ohio in 1849, took up the profession of bridge building as a young man and soon achieved national prominence. He was influential in the construction of the Eads bridge across the Mississippi at St. Louis, and while in business for himself built the Long Bridge over the Potomac at Washington, the train shed at Broad Street Station in this city, the Safe Harbor, Downingtown and Martic road elevated systems in Washington, Wilmington, Chester and Camden and the train sheds at Union Station, Pittsburgh, and at the Pennsylvania stations in Camden and Jersey City.

Mr. Brann belonged to the Manufacturers' and Columbia Clubs.

* * *

New bids opened for the construction of five dormitories at the home for the feeble-minded at Byberry show this work will cost the city \$21,000 more than when bids on the same work were first opened about two months ago.

The new bids were asked because Mitchell Brothers, who offered the low-

est bid, \$562,000, the first time, later informed Dr. Krusen the bid should have been \$662,000.

The lowest of the new bids is by Edward F. Fonder, who asks \$631,000 for the work. In the first proposal Fonder offered to do the work for \$610,000.

* * *

Charles Town Mould, sixty-two years old, an architect, died at the Pottsville Hospital following an operation. He was born in Utica, N. Y., and was a graduate of Cornell University. A widow, a son and two daughters survive. Much of his earlier work was done in Tennessee.

* * *

The Pittsburgh Plate-Glass Company will give its employees life insurance policies, according to an announcement made yesterday by the board of directors of the company. The firm, which has headquarters in Pittsburgh, employs about 125 in this city.

All employees receiving \$600 to \$3,000 a year, who have persons dependent upon them, will receive the insurance. The amount of insurance will be the same as the yearly salary of the insured. The principal will be payable to the beneficiary, \$100 at death and the remainder in twelve monthly payments. Only employees who have been with the firm three years or more are eligible.

* * *

Francis Stokes, president of the Stokes Machine Company, Seventeenth and Cambria streets, and a leading member of the Society of Friends, died at his home, 704 Locust Avenue, Germantown. He had been ill several days. He was eighty-three years old.

A NEW SPIRIT IN CIVIC BETTERMENT

Noble Foster Hoggson, President Hoggson Brothers, New York City.

Civic improvements should not necessarily mean the enhancement of a city's scheme of beautification through governmental action. It might be quite the contrary. The effort of the individual ought to signify as much in spirit, at least, as the concerted effort of a community. It is the individual spirit that is important. Let that spirit be given expression and its effect should be of real value. It shows the need and leads the way.

The point, however, is this: Efforts following along this line of least resistance, though highly laudable in themselves, most often are so thoroughly individual and disconnected that results little or no relationship between older buildings and new structures erected, or between the new structures themselves. And of course there is no unity of the whole.

The defect has been lack of co-operation; the failure to bring about concerted action of property owners in the improvements and beautification of their own holdings to harmonize with their surroundings. Certain European countries, in an effort to solve this problem, have created commissions not unlike our Building Departments, but which have broader scope and power, whose function it is to look the aesthetic as well as the practical phases of any proposed improvement in its larger relationship to the neighboring setting and surroundings.

Here in America many of the larger cities have created Town Planning bodies. This move, at least, is constructive. That it is too late to undo much of the harm already suffered only adds emphasis to the need. The problem now is not so much to correct past

mistakes of others—that cannot be done—as it is to soften the ugly scarifications, and plan for future growth. These organizations are concerned, for the most part, with the preservation of park areas and the creation of new parks, drives and occasionally new civic centres.

It is the smaller cities and suburban towns that present the greater opportunities. Here the larger aspects can be considered. They have not sinned beyond redemption. Still better, they want to be saved. The altered attitude of the last ten or fifteen years in regard to taxation imposed for civic improvements establishes that fact. It has not been many years since a proposal on the part of a municipality to expend any fair sum of money on parks, for instance, was met with most violent opposition. This is particularly true in one city in the Middle West that now boasts of the finest system of parks and drives in this country. Here the opposition at first was vitriolic.

At the same time the downtown section of that city is about as ugly and unattractive as any of the numerous ugly and unattractive business districts in most American cities. No attention was paid to establishing a small park or breathing spot anywhere near the heart of the town, nor was any necessity seen for a civic centre.

There has been and still is woeful lack of constructive imagination in connection with consistent and united and comprehensive civic improvement. It is not that we lack vision—because we do not—but we are apt to be satisfied with vision alone—to let the ideal picture in our minds satisfy our sense of need, rather than take action to transform it into an actuality.

REBUILDING OF EUROPE.

The “American Contractor” says:

“As month succeeds month in the progress of the European war one of the conjectures that is gradually assuming more definite shape is that this country will probably be called upon to supply a considerable amount of building material and perhaps to engage more directly in the work of reconstruction of Europe. The question is not one of immediate or pressing importance, for it is not known that any peace negotiations are at this time in progress. But it is one that the building trade may very appropriately begin to consider, for the longer the war continues the more important will it become.

“As it now looks, one of two conditions may develop at the close of the war. Either Europe will restore its structures very slowly, because of impoverishment, or it will rebuild the more rapidly through the co-operation of this country. It is possible, however, that even without this active co-operation the rebuilding may be rapid and that it will very sensibly stimulate the export of building materials from this country. For the work to be done will be enormous.

“It is not only that thousands of villages,

towns and cities, destroyed or seriously damaged by the contending foes, must be reconstructed, but repairs to existing structures will entail a vast amount of work and material. The usual repairs have been suspended since the war began, and as one year of neglect follows another, the deterioration becomes more rapid.

“In addition, whatever requirements there may have been for new buildings, in communities not located within the battle zones, have not been met. Scarcely a structure has been erected in all the warring countries during the last two years, except those intended for military use. In Great Britain restrictions have by law been placed upon construction work, for the materials that would there be consumed have been needed in the prosecution of the war.

“Financiers in this country are looking ahead to the work that is thus becoming more clearly probable and are considering its opportunities. Whether or not they take action, looking to the large financing of building operations in Europe after the war, there will probably be a large demand for American lumber and other forms of building material, but in the event that the rebuilding of Europe on a large scale is deemed a suitable field for American capital, there seems to be no limit to the work which the situation will present.”

CONSTITUENTS OF PORTLAND CEMENT.

It has been shown comparatively recently that the constituents of Portland cement of normal composition and normal burning are tricalcium silicate, dicalcium silicate and tricalcium aluminate. The present investigation was undertaken to show what part each of these played in developing the physical properties of this material. By the use of small amounts of boracic acid and chromium oxide as “mineralizers,” the two silicates were prepared in a fair condition of purity and in amounts large enough to permit of the making of neat and standard sand mortar test pieces. These test pieces were broken over a period of one year. The rate of setting and of hydrating was also studied, the latter both chemically and microscopically. The results show that the aluminate sets and hydrates almost immediately on the addition of water, but never attains a strength much more than 100 pounds a square inch; the dicalcium silicate takes several days for setting and at the end of one year contains but 5.5 per cent. water of hydration. It has practically no strength at seven days, but at the end of one year has a tensile strength of 600 pounds per square inch. The tricalcium silicate has all the properties of Portland cement, both in regard to setting and attaining strength.

Mixtures of either silicate with the aluminate and with the aluminate and plaster, and of both silicates with the aluminate and with the aluminate and plaster, were also studied. The effect of the aluminate was more marked on the setting properties, as was also the

case with the plaster additions; the effect of either of these two additions on the strength of either silicate or a mixture of the two was not very striking, in general not materially changing the strength of the silicate.

THE KNOCKER'S PRAYER.

O Lord, please don't let our town grow. I've been here for thirty years, and during that time I've fought every public improvement. I've knocked everything and everybody; no firm or individual has established a business here without my doing all I could to put them out of business. I've lied about them, and would have stolen from them if I had the courage. I have done all I could to keep the town from growing and never have spoken a good word for it. I've knocked hard and often. I've put ashes on the children's slide and I've made the police stop the boys playing ball on my vacant lot. Whenever I saw anyone prospering or enjoying himself, I've started a reform to kill the business or spoil the fund. I don't want the young folks to stay in this town and I will do all I can by law, rule and ordinance, to drive them away, and I have always advised the people of our town to buy their goods from a mail order house, although I knew they could buy them cheaper at home.

It pains me, O Lord, to see that in spite of my knocking, our town is growing. Some day, I fear I will be called upon to put down sidewalks in front of my property, and who knows but what I may have to help keep up the streets that run by my premises? This, Lord, would be more than I could bear. It would cost me money, though all I have was made right here in this town. Then, too, more people might come if the town continued to grow, which would cause me to lose some of my pull. I ask, therefore, to keep this town at a standstill, that I may continue to be the chief “calamity howler.”

I AM THE POSTER.

I am what I am because the leaping eye cannot deny me.

I know not doubt.

I stammer not, nor quibble.

I am the child of originality born of imperious need.

I speak with a voice of brass, but my harvest is of gold.

I follow the trail of to-morrow rather than that of to-day.

I am the modern god of color, the Titan of line.

I am the sledge hammer of art pounding on the anvil of trade.

I fling my message with the speed and smashing power of the bullet.

I hit life between the eyes and waken it anew.

I am the courier of commerce, my banner flaming always on the outer wall.

I am the poster, my home is in the market places of the world.

I am the poster.

—G. B. Clarkson.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Garage and Service Station, northeast corner Watts and Cambridge streets. Architect, Le Roy Rothschild, Bulletin Building, Philadelphia. Owner, Murray White, Morris Building, Philadelphia. Brick, 2 stories, 48 x 94 feet, slag roof, steam heating, cement, oak or maple floors, electric lighting, bulk windows, hollow metal skylights (electric fixtures and elevator reserved). Owner taking bids. In addition to those previously reported, Harry Gill, Jr., 2515 Germantown avenue, is figuring.

Pattern Storage Building, Holmesburg, Philadelphia. Architect, private plans. Owners, American Manganese Bronze Co., Rhawn and Hegerman streets. Brick and concrete, 2 stories, 22x64 feet, A. P. M. roof, cement and pine floors, rolling steel doors. Owners taking bids, due January 10th. I. T. Shoemaker, 1324 Walnut street; J. Sims Wilson Co., 1125 rown street; W. W. Lindsay & Co., Harrison Building; P. A. Sorenson, 1113 Callowhill street; A. R. Raff Const. Co., 1625 Thompson street; F. W. Van Loon, Denckla Building; E. R. Hall & Bro., 34 South Seventeenth street, are figuring.

Morgue and Autopsy Building (alt. and add.), northeast corner Front and Huntingdon streets, Philadelphia. Architect, J. Raymond Atkinson, 1613 North Twenty-seventh street, Philadelphia. Owner, Episcopal Atkinson, on premises. Brick, 1 story and basement, slate and tin roof, cement and tile floors, metal lath, waterproofing, hollow tile work, (1) elevator. Owners taking bids. Metzger & Fisher, Denckla Building, and Frank I. Wintz, 1613 North Twenty-seventh street, are figuring.

Store Building (remodeling), 1628 Chestnut street, Philadelphia. Architect, Louis Levi, Real Estate Trust Building, Philadelphia. Owner, The Hawthorne Shop, care Hagendorn-Mertz Co., Third and Brown sts., Philadelphia. Brick, 4 stories, electric lighting, metal lath, dampproofing, fire doors, marble work, tin roof, hardwood and pine floors, metal ceiling, new bulks, terrazzo work (heating, office partitions, gas and electric fixtures, elevator reserved). The Fields Brick Co. increased their business with Autocars

The Fields Brick Co., of Chester, Pa., say: "We have operated two Autocars for the past six months and have experienced a big increase in business due to their fast delivery work. Each car does the work of three double teams. We now reach Media, Lima, Linwood, Ridley Park, etc., quickly and easily. One day recently we made eight round trips to Jobson's Corner near Lima (128 miles in all) and delivered 8,000 bricks."

Write for illustrated catalog and list of more than 4000 concerns using Autocars in every line of business.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

GRAHAM-CAMPION CO. *Building Construction*

That Satisfies Architects and Owners

1215 FILBERT ST., PHILADELPHIA

NEW YORK'S ZONING LAW.

Its Provisions Make Radical Changes in Previous Building Code.

The recently adopted zoning law of New York City will limit the height of buildings in proportion to the widths of the streets on which they face, all the way from two and a half times the width of the street in the financial district, through two times the width of the street in central Manhattan, with one and one-half times in the remainder of Manhattan and in small portions of the other boroughs, down to the width of the street throughout all the rest of the city. A future Equitable Building could only be a third as high, because it faces on narrow streets, but a tower in the center of it, half as large again as the Woolworth tower, might rise to any height. The Woolworth Building, on the other hand, if facing on a park, might be very nearly duplicated. Twelve and fourteen story apartments will continue to go up on the main avenues, and eight and nine story apartments on the side streets, but no building of any kind can go any higher except by setting back from the street. Throughout most of the city, however, four or five stories will be the limit. Towers may be built to any height, but they cannot cover more than a quarter of the lot. Mansards, dormers and terraces are encouraged; anything that will open up the streets and bring light down into them by making the upper part of the buildings set back from the street above a reasonable height.

The size of buildings will be controlled by the fact that the law requires just so much open space on each lot. This again ranges all the way from the warehouse districts along the commercial waterfront and along the freight railways, where a building may cover the whole of its lot, through the B, C and D districts, so-called, in each of which, in succession a building has to provide for larger and larger yards and courts, down to the villa districts, where a house can cover only thirty per cent. of its lot and must be widely separated from its neighbor on at least one side. Throughout Manhattan and the densely built-up portions of the other factories, lofts, hotels, apartments; in fact, all buildings, would have to be as large as those that have been required for the last fourteen years in tenement and apartment houses. Everywhere the yards and courts have to be increasingly larger at the top as a building goes up in height.

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Philadelphia.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Factory, Delhi street, north of Columbia avenue, \$30,000. John E. Sjoström (O), 1629 North Tenth street. Smith Hardican Co (C). 1606 Cherry street. Brick, 3 stories, 40x40 feet, slag roof, steam heating.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

—Ex.

A hen is the only kind of a critter that can produce something by sitting down and doing nothing.—Exchange.

Alterations and Additions

No More Ashes To Lug

No clumsy pan to spill dust
and dirt on the kitchen floor

The Glenwood Ash Chute

solves the problem. It is located just
beneath the grate and connected by a
sheet iron pipe straight down through
the kitchen floor to ash barrel in cel-
lar. No part is in sight. Not a par-
ticle of dust can escape. Just slide
the damper once each day and drop
the ashes directly into the ash barrel.

The Dust-Tight Cover

to barrel is another entirely new
Glenwood Idea and is very ingenious.
This is only one of the splendid im-
provements of the new plain

Cabinet Glenwood

the Range without ornamentation or fancy
nickel, "The Mission Style" Glenwood. Every
essential refined and improved upon. This
Range can be had with the latest and most
improved Elevated or End Gas Range attach-
ments. It can be furnished with fire box at
either right or left of oven as ordered. Our
handsome booklet tells all about it.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 3

PHILADELPHIA
January 17, 1917

As The Editor Sees It

NINETEEN HUNDRED AND SIXTEEN goes down into the annals of building a year of mighty achievement. According to statistics, compiled by the *New York Real Estate Record*, there was expended upon new construction during the twelve months that ended December 31st, the enormous total of \$1,356,000,000, an increase over the total for 1915 of \$415,910,666.

Comparative statistics of building and engineering operations in the States north of the Ohio and east of the Missouri rivers, viz.: New York, New England, New Jersey, Pennsylvania, Maryland, Delaware, District of Columbia, Virginia, Ohio, West Virginia, Illinois, Indiana, Iowa, Wisconsin, Michigan, Minnesota, North and South Dakota, and portions of Missouri and Eastern Kansas, as compiled by the F. W. Dodge Company, show the following returns: Contracts awarded in 1916—\$1,356,989, Contracts awarded in 1916—\$1,356,989,397.

Contracts awarded in 1915—\$940,089,334.

Contracts awarded in 1914—\$720,241,300.

Contracts awarded in 1913—\$857,698,500.

Contracts awarded in 1912—\$868,103,000.

Contracts awarded in 1911—\$777,456,313.

Contracts awarded in 1910—\$805,700,399.

Comparative statistics of building and engineering operations in New York State and northern New Jersey, as compiled by the same authority, shows:

Contracts awarded in 1916—\$283,659,500.

Contracts awarded in 1915—\$169,794,734.

Contracts awarded in 1914—\$129,204,500.

Contracts awarded in 1913—\$261,007,500.

Contracts awarded in 1912—\$232,167,000.

Contracts awarded in 1911—\$227,912,500.

Contracts awarded in 1910—\$254,819,000.

* * *

HERE in Philadelphia, official figures compiled by William Gamble, statistician of the Bureau of Building Inspection, give the estimated cost of new construction as \$49,896,570—an expenditure involving 15,613 separate operations and for which were issued by the bureau 8,838 permits.

In 1915 the total estimated cost was \$39,441,225 and the number of operations 17,723. The one year which in the department records exhibits a reasonable approximation to the record-breaking total for 1916, is 1909, which recorded a total expenditure of \$42,881,270.

Mr. Gamble is moved to devote special remark to the circumstance that an outstanding feature of the year's activity in building was the quite unparalleled number of two-story dwellings erected. There were 7,204 two-story houses built within the year at a cost of \$17,766,375.

The greatest activity of the year, however, was reflected in the unusually large number of manufacturing buildings demanded to meet conditions growing out of the war abroad. Mr. Gamble estimates that not less than \$25,000,000 went into this one type of construction during the past twelve months.

* * *

IT should be borne in mind that these figures rest on new construction wholly confined within the boundaries of Philadelphia. Several millions of dollars in addition to the total record-

ed by Mr. Gamble were expended here in Philadelphia during the year for new construction within a radius of from 50 to 100 miles, work planned by Philadelphians, paid for by Philadelphia capital and handled by Philadelphia builders.

On another page of this, the Annual Building Statistics Number of THE GUIDE, will be found an interesting table, compiled from the official records, showing the number of permits issued in Philadelphia, the character of construction for which they were issued and the estimated total of cost for each class.

* * *

BUILDING and labor costs advanced beyond all previous records during the year. The *Real Estate Record* observes, in this connection:

"A building that could have been built for \$6,000 five years ago, will cost, say, about \$10,000 at existing prices for materials, labor, etc., and five years from now it may perhaps be re-produced for \$6,000. While sixty per cent. of the current cost might be carried as a loan, the loan would be for a very short term, and lenders would insist upon a heavy reduction of the principal at the renewal of the mortgage. During a five-year period the difference between the present and the expected future cost of production would represent a depreciation of \$4,000 in the value of the property, or \$800 a year. This would be eight per cent. per annum, in addition to the normal structural depreciation. Investment building may not be successfully undertaken on this basis, and investment buildings may, therefore, be limited until the cost of building recedes or until rents advance sufficiently to offset the prospective loss due to the abnormal cost of construction."

A builder remarked, only the other day, that a figure of \$6,500 for the steel

**DRAWING

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

and fireproofing in a building 25x75 feet, submitted in November, 1912, is resubmitted to-day at \$13,000. The indications are that still sharper advances will ensue in all lines under the continued pressure of foreign and home demand.

* * *

THE *New York Times* of Sunday last devotes a lengthy editorial to a discussion of the present method of planning and awarding federal buildings. Whether we elect to concur in all of the views of the writer or not, it is, in any event, a healthy sign of growing popular interest in the subject that a newspaper such as *The Times*, should deem it of sufficient interest to single it out for discussion:

"The latest annual report of the Supervising Architect of the Treasury Department," comments *The Times*, "showed that on June 30, 1916, his office had yet to build 269 public buildings authorized by Congress. Not before 1920, at the earliest, could these be completed. Though the work of that office is three years behind, the passion of Congress to decorate hamlets with 'Government monuments' will give it no breathing space. In July, careless of the President's warnings, the House Public Buildings Committee brought in the 'Omnibus' bill, and then swelled it with appropriations for Federal palaces in divers hamlets. In December a new 'Omnibus' bill, containing all but one or two of the authorizations in the July bills and adding more, was brought in.

The leaders of the Pork Phalanx, alarmed by the general disgust at the conglomerate of extravagance which they have dared to make in the presence of a monstrous deficit, try to juggle the \$39,000,000 of the bill into \$28,000,000. Whatever the sum, the method by which the bill has been put together is a continuation of an abuse which the state of the public finances makes intolerable, which public opinion should have ended long ago. Mr. Wilson is going to stop it. Some board or commission will have to be established to pass soberly, without political or local bias, expertly on the merits of each project."

* * *

THE day of public buildings as bids for votes in Congress districts, of appropriations for patronage or division of the spoils, is about ended. There is another interest and another issue in the matter. It is not merely a financial question. Government buildings should be designed by experts. They should be appropriate to the site chosen and to the place in which they stand. A Post Office in Deaf Smith County should not be a reduction of a grandiose Post Office in a great city. Some of the photographs of cross-roads

Government palaces look grotesquely inappropriate, a hybrid of tomb and temple. The maintenance of a certain type, a standardization of plan, is favored, probably, by the majority of architects, if a profession may be mentioned that is regarded with distrust or suspicion by Congress and officialdom in general. Officialdom's notion of type and standardization seems to be to design a building, and repeat the design everywhere.

"It is the present American fashion to admire France. She deserves admiration not merely for her moral qualities, apparently undiscovered by most Americans before the war, but for her sense of proportions, her love of beauty, her luminous intelligence, her application of it, her sturdy and ordered plan. What would France think of the Federal building system? What would she think of a Government that, having established, late and reluctantly, a Commission of Fine Arts, rejected its advice, and proposed to disfigure Washington, spoil its vistas, injure irreparably its park system, blot its whole plan of harmonious development, by the erection of a power house of heaven-grazing chimneys on the Potomac waterfront? And what shudders run through our 'plain' Congressmen at the suggestion of a Government Bureau of Fine Arts."

* * *

THE office of the Supervising Architect of the Treasury, with 269 buildings yet to build and the pork patriots yearning to make its future days miserable with 400-odd more, deserves sympathy rather than criticism, it may be thought. No doubt it is doing its best and nobody wants to boot it. Still, is it unkind to say that the Supervising Architect is a lawyer, that his boss, the Assistant Secretary of the Treasury, who has charge of public buildings is or was a newspaper writer? However industrious or capable these gentlemen are—and they are not at fault, but the system is—nothing of expert direction or suggestion can be expected from them. The work of the Supervising Architect's office necessarily falls into the hands of draftsmen, excellent draftsmen, no doubt, amateurs of the everlasting official blueprint, but nothing more."

* * *

ARCHITECTURE is the business of architects. Government architecture should be the business of Government architects. A body of architects, to whom a builder and engineer might be added, should ponder the question of public buildings, develop a type, if a type be desirable, insure that every public building, its necessity having been established, should fit its purpose and site, be honestly constructed,

be beautiful. The Supervising Architect's office has more than it can do, and is not fitted to do it well. A commission to study the whole subject thoroughly would furnish a definite and detailed plan. It is enough to point out that the excision of 'pork' is but the condition precedent of a sound and civilized system of Federal buildings. 'It is to our discredit as a nation,' says Mr. Roosevelt, no mere 'dreamer' or 'literary fellow,' 'that our Governmental buildings should so frequently be monuments of sordid ugliness.' * * * Congress, acting on its own initiative, is as unfit to prescribe conditions for the erection of public buildings as it would be to prescribe conditions for a General or an Admiral; for a Grant or a Sheridan, a Farragut or a Dewey. It needs leadership in one case just as much as in the other."

* * *

PRODUCTION of pig iron during 1916 was close to 40,000,000 tons, an increase of almost 10,000,000 tons over 1915. Had the railroads been able to do their part in handling freight, several hundred thousand tons would have been added to the 1916 production. In December the pig iron production was 3,208,382 tons as against 3,317,805 tons in November.

A new precedent was established during 1916 in the establishment of new steel mill capacity. During the year there were 103 open-hearth furnaces completed with an output of 4,205 tons a year. New steel making capacity with the opening of 1917 shows a total of seventy-two open-hearth furnaces, eleven converters for duplexing, and two bessemer steel plants which will make an annual output of 5,015,000 tons increase. Five new blast furnaces were completed during 1917 with a capacity of 800,000 tons, and the year opened with twenty-five under construction with a capacity of 4,100,000 tons annually.

Eastern Pennsylvania plate mills have been asked to bid on 150,000 tons of ship plates. One firm has been figuring on 75,000 to 100,000 tons. Pittsburgh mills have all the tonnage they can handle for the year. Quotations on plate run from 3.60c at convenience of mill to 4c and 5c, depending on size of order and time of shipment. Some Eastern mills have asked as high as 6c for ship plates.

Rail buying for 1918 delivery continues. Since the first of the year the Southern Pacific has closed with the Steel Corporation's plant at Ensley, Ala., for 55,000 tons, and the Chicago & Alton for 8,000 tons with the same mill. The Carnegie Steel Company will roll 25,000 tons for the Erie Railroad. The Baltimore & Ohio has contracted for 2,000 cars, dividing the order with the Pullman Company and the Standard

Steel Car Company. The French State Railways have inquiries out for 10,000 cars. The Russian State Railways seem to be unable to close for the remainder of the cars which were scheduled last year, and of which only a part have been contracted for.

Like rail mills, makers of switches

and frogs are accepting orders for delivery during 1918, and 40,000 tons of track equipment have been sold for delivery one year hence. France has about settled to take spikes and track bolts with which to build several hundred miles of railroads.

dent for many years, to establish a fitting memorial to the artist. The memorial may take the form of scholarships for needy art students.

MODERNIZED.

I remember, I remember,
The house where I was born;
The little windows where the sun
Came peeping in at morn.
You'd hardly know the old place now,
For dad is up-to-date,
And the farm is scientific
From the back lot to the gate.

EDITORIAL NOTES

Among the latest steel building orders are 1,250 tons for a mill at Ashland, Ky., for the Ashland Mining Company; 1,000 tons for a foundry at Schenectady for the General Electric Company, and about 1,000 tons for a foundry at Canton, Ohio; a factory trust company at Dayton, Ohio, and a factory for the American Sugar Company. A contract for a pier at Philadelphia requiring 900 tons of steel has been placed also.

* * *

Moving pictures showing typical American manufacturing processes, welfare work in industrial institutions, and other details of American economic life are to be exhibited in South America, under the auspices of the Bureau of Foreign and Domestic Commerce. United States Commercial Attaches in South America are to make arrangements for having these films shown in the motion picture houses of cities where they are stationed. It is hoped that such exhibitions will be preliminary to an extensive campaign by American manufacturers in South America. Already plans for such a campaign are being made.

* * *

Steel merchant vessels building or under contract to be built in privately owned American shipyards on Dec. 1, 1916, numbered 400, of 1,428,003 gross tons. On Dec. 1, 1915, they totaled 202 vessels, of 761,511 tons, or about half of this year's total.

* * *

A survey of the proposed Darby elevated line has been begun by twenty engineers connected with the city transit department. Director Twining hopes to have plans for the line ready to present to the Public Service Commission for approval during February. The Darby line will be about six miles long. All stations will be upon the building line and entrance will be had through doors similar to those opening upon a store, so that the sidewalks will be left unobstructed by the stations.

* * *

Stockholders of Harrison Brothers &

Co., manufacturers of paints and chemicals, have been notified that \$5,700,000 cash have been offered for the Harrison plants by the E. I. du Pont de Nemours Company, and the du Pont company will assume all outstanding indebtedness. Acceptance of the offer is urged upon stockholders in a statement signed by R. S. Hubbard, president of the Harrison company. In financial circles the purchase offer is regarded as indicating that the du Pont company foresees a wide development in American manufacture of chemicals at the close of the war, entirely apart from the manufacture of explosives.

The Master House Painters' and Decorators' Association of Pennsylvania closed its twenty-ninth annual convention with the election of officers and the selection of the place for next year's session. The delegates have been meeting daily at the Bellevue-Stratford since Tuesday. The necessity for more practical instruction and less theory in trade and technical schools was emphasized by P. J. Byrne, of Pittsburgh, who added that more stress should be laid on fundamentals. "A boy who learns how to paint a radiator as it should be done may develop into a great scenic artist," he said. "But no one can become a real artist unless he knows how to properly paint a radiator." Moving pictures and lectures on trade topics occupied the attention of the delegates at the final business session.

Henry Thouron's great mural painting for the right nave of the Philadelphia Cathedral, which he executed in Rome just before his death in 1915 has been put in its place, opposite the companion picture in the left nave of the edifice, which was painted by Thouron in this city, in 1911. The first picture, depicting the whole world saluting the mother of Christ, has been called the finest mural painting in the United States. Plans are being considered by the fellowship of the Academy of the Fine Arts, of which Thouron was presi-

The house and barn are lighted
With bright acetylene,
The engine in the laundry
Is run by gasoline.
We have silos, we have autos,
We have dynamos and things;
A telephone for gossip,
And a phonograph that sings.

The hired man has left us,
We miss his homely face;
A lot of college graduates
Are working in his place.
There's an engineer and fireman,
A chauffeur and a vet.,
Electrician and mechanic—
Oh, the farm's run right, you bet.

The little window where the sun
Came peeping in at morn
Now brightens up a bathroom
That cost a car of corn.
Our milkmaid is pneumatic;
And she's sanitary too;
Dad gets fifteen cents a quart
For milk that once brought two.
—Exchange.

COMING TRADE CONVENTIONS.

—Chicago Cement Show will be held in the Coliseum, Chicago, from Wednesday, February 7, to Thursday, February 15, 1917, inclusive.

—National Pipe and Supplies Association will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

—Retail Lumber Dealers' Association of the State of New York will hold its annual meeting at the Onondaga Hotel, Syracuse, N. Y., January 24-25, 1917.

—Pennsylvania and Atlantic Seaboard Hardware Association and the New York State Retail Hardware Association will hold their joint annual convention and exhibition in New York City February 6-9, inclusive. The headquarters will be in the Hotel Astor and the exhibition in the auditorium of Madison Square Garden. W. P. Lewis, Huntingdon, Pa., is secretary-treasurer of Pennsylvania and Atlantic Seaboard Hardware Association, and John B. Foley, Kirk Building, Syracuse, N. Y., secretary of New York State Retail Hardware Association.

—National Fire Protection Association will hold its annual meeting in Washington, D. C., May 8-10, 1917.

—National Complete Building Show will be held in the Grand Central Palace, New York City, March 5-11, 1917.

—National Builders' Supply Association will hold its annual convention at the Hotel Sherman, Chicago, February 11-12, 1917.

—Hardwood Manufacturers' Association will hold its annual meeting at the Sinton Hotel, Cincinnati, Ohio, January 30-31, 1917.

—New York State Association of Master House Painters and Decorators will hold its annual convention at Rochester, N. Y., on January 16-19, 1917.

—National Brick Makers' Association will hold its next convention at the Hotel McAlpin, Broadway and Thirty-fourth street, New York City, from March 4-11, 1917.

"CHESLEY" STOCK DOORS.

One of the most important accessories in the later day building construction is a fire-proof door.

The A. C. Chesley Company, of New York, are manufacturers of a door of the most improved kind, having a well equipped plant which enables them to manufacture at a minimum cost. They are producing the "Chesley" stock doors in standard sizes at prices much lower than it is possible to manufacture otherwise. This well established method has proved advantageous, as orders are filled at very short notice, and there is no possibility of delay. Since this door has been placed on the market it has given entire satisfaction.

The door is made of metal covered wood, having no bolts, nails, rivets or screws used in its construction. All metal used has a non-corrosive coating. It is made in designs to suit any condition, using plain panelling or glass insertions; this affords greater selection. The "Chesley" door will not fail to appeal

to the well trained and experienced in building construction, as it is a light, strong, and substantially made door of very attractive design. This door has no crude pressed work, but every part is cleanly and mechanically made.

It is the result of many years' experimenting and improving the expensive, unattractive door of the past decade to a door that suits the most particular tastes. The "Chesley" door is sold to the building trade in competition with wood doors, showing that it is within the reach of all. Catalogs will be furnished by the Philadelphia Fire Retardant Company upon request.

J. L. TYSON ELECTED BY MASTER BUILDERS.

At the annual meeting of the Master Builders' Exchange of Philadelphia, the following officers were elected: President, Jacob L. Tyson; first vice-president, O. W. Ketcham; second vice-president, Edwin E. Hollenback; third vice-president, W. Nelson Mayhew; secretary, Charles Elmer Smith, and treasurer, P. S. Smith.

The following directors were elected to take the places of those whose terms expired: Francis F. Black, C. E. Drehmann, Edgar J. Ellis, William W. Hodgson, Edwin F. Morse, C. F. Shellenberger.

PLANS TO BE EXHIBITED.

The competitive plans for the million dollar California State building for the Civic Center are to be displayed in the rooms of the Building Material Exhibit at 77 O'Farrell street, San Francisco, as soon as the jury of awards selects the winning design and plans next February.

The eight architects and architectural firms chosen among the fifty-three exhibitors at the first exhibition for having the eight best designs are working on complete plans and specifications. Their work includes working or detail drawings, as well as finely executed perspective and flat drawings of the exteriors. When their work is done the plans will be shown in the Building Material Exhibit in this city.

The management of the exhibit has arranged a programme for the coming year in order to have a feature each month for the benefit of manufacturers, architects and contractors. One week each month will be devoted to architects with exhibitions of designs and drawings of residences, apartment houses, bungalows and other structures.

A competition open to architectural draftsmen on the Pacific Coast is to be held. A jury of three leading architects will pass upon designs.

HOUSING CONDITIONS IN DETROIT.

Detroit, Mich., owing to the rapid growth of the city, is struggling with dangerously unsanitary conditions in some of its poorer residence quarters. The city, the state, the university of Michigan and the Michigan Chapter of the American Institute of Archi-

tecs will co-operate in the careful preparation of city and state building codes to remedy the conditions. It is asserted that the total building operations in Detroit in 1917 will exceed \$50,000,000.

HOME OF THE FUTURE.

Discussing the trend of modern architecture, Anton Scherrer, in an address recently before members of the Indianapolis Real Estate Board, declared there are three essentials necessary in designing a modern home.

"The trend of modern home building," said Mr. Scherrer, "embodies three requisites—utility, economy and beauty—all being of the same value.

"We should not build for utility alone. Economy should not be confounded with cheapness. We should look first at the actual cost of the building instead of its initial cost. Cheap materials and a high maintenance expense will make a cheaply built building costly. Modern architecture demands that only materials that have stood the test is used in home building.

"In designing the home of the future, we should get back to the real fundamentals that concern themselves with proper proportions. We can not say what style of architecture will be utilized in our plans of the future—probably both of the recognized styles, although maybe in an entirely different manner than now shown."

WOOD PRESERVATION.

In his chapter on wood preservation in his work on "Lumber and Its Uses," R. S. Kellogg says that no hard and fast line can be drawn between woods which are durable and those which are not. Timber of natural durable woods which is not seasoned before it is used or which contains a large amount of sapwood may rot quickly while properly handled timber of less durable woods may last a long time.

The decay of timber is caused by minute organisms called bacteria and fungi. It is prevented by treating the timber with anti-septics which are poisonous to bacteria and fungi. Practical considerations make only a few such substances suitable for commercial use. A first essential of a good wood preservative is that it shall not dissolve out when the wood gets wet or is placed in water. For this purpose the best material thus far discovered is creosote.

Paint lengthens the life of wood because it keeps out the moisture and closes openings through which fungi might enter; but it is essential that wood be well seasoned before it is painted.

There is abundant evidence of the long life of creosoted wood. Even in this country there are many examples of poles and other timbers creosoted 20, and even 30, years ago which today are apparently as sound as when first set in the ground. In Europe where wood preservation is an older industry the results are still more marked.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Store and Dwelling (alt.), 1603 Walnut street, Philadelphia. Architect, private plans. Owner, H. Kay Messick, northeast corner of Sixteenth and Chestnut streets. Consists of new Caen stone front, new bulks, mill work, plastering, etc., 4 stories (interior decorating reserved). Owner will take bids in a few days.

Subway Stations (5), various locations, contracts Nos. 201-202-203, \$7,000,000. Architect, private plans. Owners, City of Philadelphia, Department of City Transit, care of William S. Twining, Director, Bourse Building, Philadelphia. Excavating, heavy construction underpinning, reinforced concrete, waterproofing, dampproofing, skylights, safety treads, iron stairs. Owners taking bids, due February 6th, at noon. Keystone State Const. Co., Pennsylvania Building, Philadelphia, is figuring.

Storage House (add.), Thirty-eighth and Powelton avenue, Philadelphia. Architects, Sheen & Gill, Heed Building, Philadelphia. Owners, Powelton Storage House, on premises. Brick, slow burning, 5 stories, 36x70 feet, slag roof, pine floors. Owners taking bids, due January 15th. The following are figuring: Metzger & Fisher, Denckla Building; Thomas C. Trafford, 1613 Sanson street; Stacy Reeves & Sons, 2011 Market street; H. E. Grau Co., 1707 Sanson street; Sheen & Gill, Heed Building, all of Philadelphia.

Apartment House, Philadelphia. Architect, J. Warren Myers, 1701 Chestnut street, Philadelphia. Owner's name withheld. Brick, steel, stone and terra cotta trim, 16 stories, 45x135 feet, slag roof, hardwood and pine floors, steam heating, electric lighting, metal casements, waterproofing, fire doors, tile and marble work, 3 elevators, cabinet work, terrazzo work. Architect has received sub-bids.

Residences (10), Twenty-ninth and Allegheny avenue, Philadelphia. Architect, private plans. Owner, Morris L. Miller, Commonwealth Building, Philadelphia. Brick, 2 stories, 15x46 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owner taking sub-bids.

Residences (86), Chester avenue, Sixtieth and Sixty-first streets. Architect, Frank V. Greenstein, 715 Empire Building, Philadelphia. Owner, James Egnal, Sixty-first and Regent streets, Philadelphia. Brick, 2 stories, 16x57 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Plans in progress. Owner will take sub-bids in one week.

Apartment House (alt. and add.), 1006 S. Nineteenth street, Philadelphia. Architect, C. Henry Wilson, 2d, 1931 North Twenty-second street, Philadelphia. Owner, Peter Lewis, 719 South Smedley street, Philadelphia. Consists of general remodeling of present 3-story building. Additional story, 1 story, 10x64 feet, new addition, 4 stories, 42x16 feet, slag roof, hot water heating, combination fixtures, hardwood floors, tile work, cement work, (1) passenger elevator, (4) bathrooms, fire escapes, leaded glass. Owner taking bids, due January 16th. Ketchum & McQuade, 1029 Brown street; J. F. Trent, 2051 Master street, and Robert West, 1508 Lombard street, are figuring.

Cigar Factory (alt. and add.), 2115 South Eighth street, Philadelphia. Architects, Magaziner & Potter, 603 Chestnut street, Philadelphia.

Owners, Emze Cigar Co., on premises. Consists of general exterior and interior alterations, addition, 1 story, brick, 44x30 feet, slag roof, electric lighting. Architects taking approximate bids, due January 18th. Lam Building Co., 1001 Wood street, is figuring.

Store and Dwelling (alt. and add.), and Garage, southwest corner Ninth and South sts. Architect, Julius J. Anderson, 736 Drexel Building, Philadelphia. Owner, Henry Jacoby, on premises. Brick, 3 stories; garage, 1 story, 23x18 feet, slag roof, pine, parquet floors, cement and mineral floors, combination lighting, metal lath, tile and marble work, metal window guards. Owners taking bids, due January 18th. Smith-Hardican Co., 1606 Cherry street, and Lam Building Co. are figuring.

Tool House, Twelfth street and Glenwood avenue, Philadelphia. Architects, Maintenance of Way Dept., Penna. RR. Co., Philadelphia. Owners, Penna. RR. Co., Broad Street Station, Philadelphia. Hollow tile, 1 story, 16x30 feet, asphalt shingle roof, plank floors. Owners taking bids, due January 19th, at 10 A. M. The following are figuring: Armstrong & Latta, Land Title Building; Lincoln H. Smith, Hale Building; E. E. Hollenback, Fifteenth and Race streets; Chas. McCaul Co., 1713 Sanson street; Bailey-Lush Co., 201 N. Broad street; Monaghan & Loe, 3016 Chestnut street; Brann & Stuart, Commercial Trust Building; A. L. Carhart, Hale Building; John N. Gill & Co., Heed Building; Guy Croyle, Merion, Pa.; John V. Speth & Co., 1714 Sanson street.

Store Building, 331 South street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, name withheld. Brick, 4 stories, 20x156 feet, slag roof, steam heating, electric lighting, electric freight elevator, parquet floors, tile and marble work, metal lath and ceilings, skylights. Plans about completed. Architect will take approximate bids January 15th.

Sales Building, 1307 South Sixth street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, A. Smith, on premises. Brick and stone, 1 story, 30x27 feet, and 15x50 feet, slag roof, electric lighting, marble work, skylights, metal work, wrought iron work. Plans completed. Owner ready for bids.

Store (alt.), 34 North Fifth street, Philadelphia. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owners, Commercial Photo & Engraving Co., Tenth and Arch streets. Consists of new front and interior alterations, 3 stories, metal lath, fire doors, tile work, pine and cement floors, millwork, office partitions (steam heating, electric work and gas fitting reserved). Owners have received bids.

Garage and Service Station, northeast corner Watts and Cambridge streets. Architect, Le Roy Rothschild, Bulletin Building, Philadelphia. Owner, Murray White, Morris Building, Philadelphia. Brick, 2 stories, 48x94 feet, slag roof, steam heating, cement, oak or maple floors, electric lighting, bulk windows, hollow metal skylights (electric fixtures and elevator reserved). Owner taking bids, due as soon as possible. J. R. Jackson, Perry Building, is figuring, in addition to those previously reported.

Store Building (alt. and add.), 710 Passunk avenue, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Harry Axlorod, 710 Passunk avenue, Philadelphia. Consists of alterations to present 3-story building and new addition, 2 stories, 40x24 feet, slag roof, steam heating, combination lighting, yellow pine floors, metal lath, steel beams. Plans about completed. Owner will be ready for bids in about one week.

Factory Building, southwest corner Philip and Wharton streets, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin sts., Philadelphia. Owners, M. Platt & Co., 1526 E. Moyamensing avenue, Philadelphia. Brick, slow burning, 2 stories, 40x90 feet, slag roof, electric lighting, hand elevator, concrete and wood floors, dry-kin room, smoke stack, brick, 50 feet high. Plans about completed. Owners will take bids in about one week.

Garage, 1509-1511 Germantown avenue, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Harry Katz, 1537 Germantown avenue, Philadelphia. Brick, 1 story, 40x96 feet, slag roof, galvanized iron skylights, cement floors, electric lighting, steam heating. Owner taking bids, due as soon as possible. Jacob Bender, 1817 South Fourth street; Fred Quate, 1323 Snyder avenue, and Albert Schmitt, 2449 North Hancock street, are figuring.

Office Building, 1328 Walnut street, Philadelphia. Architects, Folsom & Stanton, 1328 Walnut street, Philadelphia. Owner, J. Warner Hutchins, on premises. Stone, brick, steel and terra cotta, 10 stories, 18x90 feet, slag roof. Preliminary plans in progress.

Market House (alt.), 22 and 24 North Delaware avenue, Philadelphia. Architects, Const. Dept. of Swift & Co., 60 North Market street, Boston, Mass. Owners, Swift & Co., 908 Noble street, Philadelphia. Brick, steel and concrete, 5 stories (alterations to first three floors only), pine and asphalt floors, metal lath, waterproofing, fire doors, tile work, hollow metal skylights, rolling steel shutter (electric work, steam heating, elevators and refrigerating reserved). Owners have received revised bids.

Store and residence, north side of Spruce street, east of Sixty-third street. Architect, E. Allen Wilson, 1209 Chestnut street, Philadelphia. Owner, J. Fienberg, care of A. E. Harshman, 510 Lincoln Building, Philadelphia. Brick, 2 stories, 15x63 feet, slag roof, hot water heating, electric lighting, hardwood floors. Owner ready for sub-bids.

Community Garage, Wagner avenue, east of Thirteenth street, Philadelphia. Architect, Frank K. Stahl, 2713 Park avenue, Philadelphia. Owner, Geo. E. Noll, 2352 North Thirteenth street, Philadelphia. Brick, 1 story, 125x92 feet, slag roof, steam heating, cement floors, electric lighting. Owner taking bids, due January 13th. Henry P. Schneider, 3713 Old York road; Frank E. Stahl, 2713 Park avenue; and Conneen Const. Co., 1829 Filbert street, are figuring.

Machine Shop and Warehouse, 943-53 North Front street, Philadelphia. Architect, not selected. Owner, Herman L. Winterer, 908 Beach street, Philadelphia. Brick, details not decided.

Temporary Shed, Thirty-second and Cherry streets, Philadelphia. Architects, Bunting &

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

—Ex.

He would save the commission of the architect, but ruin the store.

Haley & Son, Wilmington, Del.

The chap who bags the glittering prize
Is the fellow who learns to advertise

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

Dwelling, 1437 Diamond street, \$600. N. D. Wieand (O), on premises. E. P. Rickly (C), 3860 North Sixteenth street. Hot water heating system.

Wharf, Morris street wharf, \$3,000. Baugh & Sons Co. (O), Pier 72. Link Belt Co. (C), Nicetown, Pa. Tower.

Factory, 1406-08 North Front street, \$1,100. Est. of Eva Link (O), 2733 North Thirteenth street. Matthew Schmidt (C), 1308 North Sixth street. Repair fire damage.

Storage House, 519 Bainbridge street, \$650. E. Kolsky (O), 730 South Fifth street. Jos. E. Myers, Jr., Co. (C), 1237-39 Ridge avenue. Repair fire damage.

Store, Eleventh and Market streets, \$6,000. Frank & Seder (O), Eleventh and Market sts. P. M. Sax (C), Franklin Bank Building. Elevator enclosure.

Store, Eleventh and Chestnut streets, \$10,000. Walter G. Becker (O), Eleventh and Chestnut streets. Thos. M. Seeds, Jr. (C), 1207 Reed street. New bulk windows, repairs, elevator.

TREE FAKIRS AT WORK.

Reports have been received by the Pennsylvania Department of Agriculture of the presence in some parts of the State of tree fakirs who are offering to control tree diseases by "vaccinating" trees by injecting some chemical under the bark or inserting chemical mixtures in holes bored in the trees.

Economic Zoologist J. G. Sanders declares that all claims of this kind are absolutely false and pure fakes and he warns the people of the State against the misrepresentation of such agents. Professor Sanders would like to have every person who is approached by an agent who wishes to vaccinate trees to send the name and address of the company or person at once to the Department of Agriculture

at Harrisburg so that effective steps to stop the fraud may be taken.

Professor Sanders also declares against the driving of nails into trees under any conditions as a cure or remedy for diseases or insects, as the practice is always harmful to the trees. It has been represented in some parts of the State that trees need more iron, and nails are driven into the trees by agents who claim to be "tree doctors." In the eastern section of the State an orchardist was recently approached by an agent who claimed that he had nails dipped in medicine which would work wonders for the trees if driven into them. Other fake agents offer to insert pills or capsules under the bark that will stop tree diseases and damage by insects. Professor Sanders and the Bureau of Zoology is ready to extend every aid to the farmers and orchardists of the State and want to warn everyone of the many methods of fakirs to get their money and ruin their trees.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones. —Exchange.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

Buy pure lime, 99% pure, no core, no grit. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Phila. Both 'phones.

RAILINGS AND GATES OF CHARACTER AND BEAUTY

Iron Railings and Entrance Gates of appropriate design, and perfect proportion would add much to the dignity and attractiveness of many country places. In other locations, for the protection of lawns and gardens, an

ANCHOR POST FENCE

with galvanized steel posts and woven wire panels, makes an admirable and long lasting enclosure.

We have catalogues illustrating Entrance Gates and Iron Railings, Lawn Fences, Tennis Court, Poultry and Kennel Yard Enclosures, Aviaries, Arbors, Trellises, etc., and will gladly mail you the one you need.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 4

PHILADELPHIA
January 24, 1917

As The Editor Sees It

THE question of specifications is not a new one. The first architect, whoever he was, upon completing his first set of plans, discovered that a set of specifications would be necessary to guide the builder. So he sat down to his desk and prepared the first set of specifications. If all this happened in the stone age that first architect must have been something of a stone-cutter, for hacking out a set of specifications—as we know them to-day,—on a stone tablet, or what is more likely, a series of stone tablets, must have been a job in itself.

Be that as it may, the first architect undoubtedly faced early in his career the task of preparing the first bill of specifications. We know local builders who are willing to swear that this same set, prepared back in the dawn of the ages, is still in use, but, then, builders are a prejudiced lot when it comes to specifications and we feel sure won't take it amiss if we decline to O. K. that particular theory.

It is a fact, however, that specifications are still a prolific bone of contention between the builder and the man behind the plans. The objection most frequently heard to the average specification is that it is not specific. For some reason or other, and despite the fact that architects have been writing specifications now for several thousand years, the objection is urged that the specification does not make the points it assumes to cover as clear and as readily grasped as builders think would be possible. The object of a specification is to specify with more or less clearness exactly what is in the mind of the specifier, i. e.—the architect. Architects are practically a unit in declaring that this, the average specification, does, but builders are as much a unit in asserting that the average specification

leaves entirely too much to the imagination.

* * *

IN a recent number of the attractive little *Bulletin*, issued by the Philadelphia Master Builders' Exchange, John R. Livesey, writing from the viewpoint of a bidder on refrigerator installation, discusses in an interesting vein this mooted question of specifications:

"In these days of high prices of building materials every effort should be extended by the architects to assist the contractors in getting down to rock-bottom prices," says Mr. Livesey. "One way to accomplish this end is to eliminate the element of guesswork in making up estimates, and the best place to begin is the specifications. It is true that quite a few architects—and good ones, at that—are careless in the writing of their specifications, not so much due to lack of time spent on them or number of pages written as ignorance in the use of trade terms. This lack of knowledge usually results in the contractor taking a big chance, guided by the little knowledge he is able to glean from the verbose description of the article in question.

"It should be remembered that the specifications are for the contractor, and should be written in terms which he understands, and should not be a voluminous treatise which can only be interpreted by the writer. Every effort is put forth by the manufacturers of building materials to standardize their goods in such a way as to make specification writing easy for the architects. If the architect would only stop, look and listen for a minute, he would easily get acquainted with these trade terms, and, in addition to getting better bids, he would materially cut the size of his specifications by the elimination of unnecessary descrip-

tion. The above copy is from a newspaper clipping that was handed to me, and as a matter of interest to the Exchange, after reading it over, it seems worthy of consideration."

* * *

FOR the last twenty years, I, and many others, have been up against the same proposition; in my case, the descriptions given of refrigerating plants, refrigerators, cold storage rooms and all kinds of hot and cold pipe insulation in many specifications are so vague and in terms so misleading that it is almost impossible for a reputable contractor in these lines to make up a bid unless he protects himself by bidding high; where others take a chance of getting through with an installation not at all suited for the conditions.

"A contractor hesitates many times to go direct to the architect, for fear of offending his dignity and lessening his chances of obtaining the work; in other cases where they are approached, you are curtly informed to take it up through the sub-contractor who is including the special line; he has to go to the general contractor and he in turn to the architect. Endless red tape and in many cases the architect to protect his reputed high knowledge will not consider changing the specifications—often when it would save his client money."

* * *

IN other cases, the specifications are so arbitrary and vague on hot and cold pipe insulation that the contractor takes advantage of these conditions and installs material not all suitable for the work, to the detriment of the honest contractor, and, on the other hand, the contractor is forced to furnish many times material for work which was not shown or specified,

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

caught and forced to do so by vague and misleading terms in the specification.

"'Stop, Look and Listen,'" as in clipping, is good. One man cannot be perfect in all lines, but he can without lowering his dignity get advice direct from reliable persons, or from literature printed in plain terms, so that his specification will be plain and to the point, making it impossible for misunderstandings and possible lawsuits at the end.

"The architect or engineer should be as keen to safeguard the interest of the honest and reputable contractors as his clients, for in so doing his client will get value in what he is buying.

"This is especially applicable to installations of refrigerators, where the great enemy of durability and efficiency is dampness, and in the building of refrigerators and cold storage rooms, proper constructions and thickness of insulation should be used and materials installed that will resist this destructive condition to the utmost."

* * *

IT seems odd, in view of the constant complaint regarding specifications, that some effort is not made to adopt a form that will commend itself on the score of clearness and end, once and for all, the cry of obscurity. Mr. Livesey's reference to the exclusiveness of a certain class of architects is, we fear, not overdrawn. While it is eminently proper that the architect should, in so far as he may, protect himself against the habit, common to a certain element of bidders, of running in for extra-elicitation, it ought to be easy to distinguish between pests of this class and the reputable element who come honestly seeking to clear up points in the specifications vague, ambiguous and misleading. "The bigger the architect, the more reasonable," as a prominent builder remarked recently.

* * *

DEWITT H. FESSENDEN contributes a paper of more than passing importance to the current number of *Arts and Decoration* on "American Adaptation of the French Chateau Type."

"Our ablest architects," writes Mr. Fessenden, "have won their art spurs by ability to tack on modern ideas to accepted types. No more pleasing example for this practice can be found than in the old chateaus that dot the banks of the Loire. So numerous and important are these that the region much traveled by artists and tourists is geographically known as the chateau district. Already many handsome erections in rural America owe their development to these French prototypes. It is the power to invest a new building suitable to modern require-

ments with an old worldly charm that proclaims the artist architect. A very rare and precious product.

"The alliance between art, history and architecture is so subtle but at the same time so pronounced that they cannot be studied apart, each being a complement of the other. The styles and periods of architecture are merely the reflections of the men and women then living, just as to-day the houses we see to be effective must express the character and occupation to some extent of the people inhabiting them. Architecture has always played a very important part in France which is easily intelligible when we bear in mind that the French being artists must perforce express themselves artistically and where can they do that to better effect than in their homes?

"Mansard, who died in 1666, was one of the great French architects whom we know well. Montesquieu, another who said: 'Love is an architect who builds palaces or ruins, if he pleases.' Architects ruined the reign of Louis XIV. The life of France and its people is well expressed in its architecture."

* * *

THE Renaissance overflow of Italy left a great impression on the art and architecture of France. From Francois Premier down they painted pictures, wrote verses, patronized artists and architects until the very soil had an artistic atmosphere. Voltaire desired to be an architect. The ruling powers and the aristocracy were great builders, traveling as they did, bringing home ideas and luxury with which to surround themselves, producing the mixture of styles and types that make the architecture of France so interesting.

"The population during the fifteenth century has been estimated at thirty millions. At the height of the feudal glory there were four thousand noble families and ninety thousand descendants, branches of the above houses. The feudal lords, the seigneurs and other nobles had a right of levying taxes upon their followers. Then came the taxation by the clerics, who claimed their ecclesiastical tenth. Finally the people rose and peasants rioted. The mediaeval country house was a chateau; when it was protected by walls and moats it became a castle or a chateau fort.

"The later part of the fifteenth and first part of the sixteenth century saw the beginning of the Renaissance period. The Loire district being the favorite residential section of the French Kings and nobility was the first to receive the attention of the Italian architects, and artists. New wings were added, fronts of many of the chateaux embellished and adorned, and vast gardens were laid out always

with decorative fountains and corresponding balustrades."

* * *

IN 1494 Charles the VII made an expedition into Italy to settle the long disputed title to the crown of Naples. The richness of the Italian cities; the decoration of the interior palaces made a great impression, and on returning to his native country he brought with him architects and artists who helped spread the Italian influence throughout this district. Charles VIII was born and died in the chateau of Ambrose. Louis XII was born in the chateau of Bloise. Louis's front at Bloise is Gothic, but in the panels of each alternate pier of the arcade on the court side is Renaissance carving executed by the foreign artists and sculptors. With the ascension of Francis I to the throne the Renaissance advanced by leaps and jumps. Every little house, the unique farm buildings, refined in detail and have been designed with that appearance of peace as if everything came natural. In stateliness they may not equal some other types, but in picturesqueness, regardless of how placed, whether in flat land or hilly sections, it is difficult to find a superior type in any country and a style so easily adapted and so full of possibilities for the architect to develop good composition and interesting roof line, good window spacing and a successful plan."

* * *

IN common with most writers that touch the subject, Mr. Fessenden deplores the failure of American designers to get color into the work they are called upon to do. Despite climatic conditions this feeling for color in American design is one that is bound to undergo a remarkable development within the next decade.

Thanks to the art of the texture brick makers, to polychrome terra cotta and a growing interest on the part of architects in the movement to divorce American design from its traditional drabness there is reason to believe that beautiful and strikingly original effects will grow out of the use of the mediums named, and others, within the next ten years.

The finest automobile will not run when the tank is empty, and the finest space can not pull unless it is filled with copy that grips interest.—"Printer's Ink."

EDITORIAL NOTES

Warren Webster & Co., Camden, N. J., announce that they have disposed of the business of their air conditioning department and on and after January 1, 1917, the Webster air conditioning apparatus will be manufactured and exploited by the Braemer Air Conditioning Corporation, Lafayette Building, Philadelphia, Pa. The new corporation has been formed by William R. Braemer, for many years manager of the air conditioning department of Warren Webster & Co. Besides conducting a general business in the manufacture and sale of air purifying apparatus, the new company will act as experts in air conditioning work in all its phases. The best wishes of a wide circle of friends will accompany Mr. Braemer in his enlarged field of activity.

* * *

The Year 1916 has gone down in history as one of the most important periods in building activity ever known in the City of New York. The record for building is \$257,000,000. There was a falling off from the previous year in the construction of flats and dwellings. Residential construction cost \$96,000,000; Flats, \$63,000,000; Dwellings, \$33,000,000 and new business and miscellaneous structures, \$130,000. Prices for building materials are still high, and no recession is expected as long as the high cost of labor exists.

* * *

The Federal Courts in Philadelphia, on request of certain stockholders in the Keestone Plaster Co., and its subsidiary Keestone Fire Proofing Co., have appointed a receiver to straighten out the financial matters of the concerns. Both companies are understood to be solvent but in need of ready cash to meet maturing notes and merchandise claims to the amount of \$18,000. The assets of the two companies are in excess of half a million.

* * *

The Youngstown Sheet and Tube Co. has purchased 300 acres of land in the vicinity of East Youngstown involving an outlay of \$300,000. It is understood that the enterprise contemplates a large housing project. Rapidly increasing labor requirements of the steel company demand more housing facilities than are provided by the community of East Youngstown and Struthers.

* * *

The annual meeting of the National Lime Manufacturers' Association will be held at the Hotel Biltmore, New York

City, February 6th and 7th. Only those manufacturers who are members of the organization will be permitted to attend.

* * *

The University of Michigan is being considered by a group of manufacturers of wood products as a place in which to conduct scientific research. Should it be chosen these manufacturers would establish a \$50,000 plant in Ann Arbor, employing a large staff of high salaried experts to work out problems on a large scale.

* * *

The Detroit Brick Manufacturers' and Dealers' Association has constructed a miniature brick house and erected it in the exhibit room of the Builders' and Traders' Exchange, constructed entirely of hand molded miniature brick made from Detroit clay.

* * *

The city planning commission of Johnstown, Pa., has just begun work on an extended program of improvements that will provide for all the work that the city can handle within the next two or three years. With the plans of Architect Hornbostel as a guide, the planners first will devote their attention to the improvements on The Point, which have been sanctioned by the City Council and which will consist of a retaining wall that will cost many thousands of dollars, a stadium and athletic field and improvements to the playground immediately adjoining. The planners also will give their attention to the proposition to create a boulevard along Franklin street in the Sixth and Eighth wards; the improvements necessary to the Constable Hollow Park in the event that the city decides to purchase the property; to the beautification of the Westmont hillside and to the improvement of parks that may be acquired from time to time in the suburban districts. It will require six months to complete the work. The improvements the planners have in view at this time represent an outlay in the neighborhood of \$200,000.

* * *

It is said that the Bessemer & Lake Erie Railroad is arranging to purchase land and put up houses for its employees, to relieve the housing situation in Greenville, Pa., where houses are at a premium and turning people away from the town who have secured employment there. It is stated that the company will erect the houses and allow the men to buy them on the installment plan if they so desire,

The award of contracts for razing all the buildings standing in the line of the Parkway from Broad street to Sixteenth means that in a few months a tremendous gap will be made in the very centre of the city. This will afford an unparalleled opportunity for civic adornment if properly utilized. Presumably plans have been worked out by the municipal authorities and the Art Jury for using this great open space in such a way that, besides serving as an imposing entrance to the Parkway, it will give a fine setting to the surrounding structures. The great central station of the subway system will be located in part there and should give a chance to secure something more ornamental than mere flights of stairs slightly sheltered from the weather. The subject offers great possibilities for public discussion as to the best plans for utilizing this prospective square in a manner worthy of the city.—*Philadelphia Record*.

The annual meeting of the National Warm-Air Heating and Ventilating Association is to be held at the Hollenden Hotel, Cleveland, Ohio, on Wednesday, January 24. It will be remembered that the association has been most active in promoting the best interests of the furnace industry through its educational and advertising campaign. One of its committees has been actively working on a specimen furnace code for municipalities, towns and cities. A continuation of this and other work looking to further expansion of the furnace trade will be

The annual dinner of the members of the Building Material Exchange of the City of New York was held Thursday afternoon, January 11, at the Hotel McAlpin. The dinner was attended by approximately two hundred members of the association and their guests. The toastmaster of the occasion was C. J. Curtin, president of the organization, and addresses were made by Borough President Marks, United States Senator Calder and Charles M. Kelly, president of the New England Builders' Supply Co., of Providence, R. I. Other guests included the Superintendents of Building of Greater New York and F. A. Genung, of Newark. The committee in charge of the arrangements was composed of C. J. Curtin, Elliott Smith, George A. Molitor, Joseph F. Miller, Frank E. Wise, Harold Halstead and Walter C. Schultz.

The chief building materials of the future will be concrete, aluminum and glass, according to Frank Shuman, engineer, who spoke at a luncheon of the Master Builders' Exchange, Seventh street below Market. Describing some notable scientific appliances made recently, he mentioned "sun boilers," whereby the rays of the sun are utilized as a source of mechanical power.

* * *

James E. McNulty, manager of The J. J. Snider Lumber Co., has been elected President of the Columbus, O., Builders' Exchange. Wm. F. Keon is first vice-president; E. A. Prentice second vice-president, and R. L. Wirtz, Will D. Cherry, J. C. Brigel, George F. Frankenberg and David Krause are directors.

Another loan of \$10,000,000 for general municipal improvements is under consideration by leaders of the Smith administration. The Mayor discussed the proposition with his directors before he left for the South on Saturday. The money would be used for improving the water system, streets, sewers, bridges and other classes of work not provided for sufficiently in the \$42,450,797 general

loan authorized last year. The city's borrowing capacity was almost exhausted by the three big loans, aggregating \$114,525,000, authorized last year, so that it is necessary to ask the people to approve the contemplated new issue. The next regular election will not be held until the primary in the fall, and to hold a special loan election this spring would cost about \$70,000. A Councilmanic loan of \$10,000,000 could not be authorized at the present time as it would go above the legal limit of money that can be borrowed by authority of Councils alone.

PORTLAND CEMENT MORTARS AND CONCRETES.

A publication has been issued by the Bureau of Standards, Department of Commerce, on the "Compressive Strength of Portland Cement Mortars and Concretes," which will be of interest to contractors and engineers and, in fact, to all users of cement.

Many users of cement believe that the strength of concrete is entirely dependent upon the quantity of cement used in the mixture. This is not true, as a mixture lean in cement but properly made may have much greater strength than a rich mixture improperly prepared.

While there are not a great many failures of concrete structures, the majority of those which do occur are due to careless methods of preparing and placing the concrete, or ignorance of the effect of variable treatment. Most of the concrete used in building construction work to-day is mixed with an excessive quantity of water which permits of economic transportation from the mixing plant to the forms by means of chutes and troughs, but this excess of water may result in reducing the strength 50 per cent. or more from that which could be obtained by using a lesser quantity of water.

The paper states that certain generally accepted methods of testing aggregates and proportioning mixtures are incorrect and suggests methods of selecting concrete aggregates, proportioning the mixture, placing and curing.

Copies of the publication, "Technologic Paper No. 58," may be obtained free upon request to the Bureau of Standards, Washington, D. C.

HIGHER REALTY VALUES WOULD COMPENSATE CITY.

The increase in real estate values following such city improvements as the high-speed transit lines, the Parkway, the southern boulevard and the widening of Delaware avenue, will more than compensate the city for the huge sums it will expend. That was the statement of Edgar G. Cross, president of the Philadelphia Real Estate Board, who spoke before the Rotary Club at a luncheon at the Hotel Adelphia.

"There are many persons who think that

the expenditure for the proposed big civic improvements is excessive," said Cross. "They should realize the great benefits that will accrue. Many millions of dollars of new dwellings and buildings in the wake of the improvements will follow and more taxes will be poured into the city treasury. Industries will be stimulated, and more industrial concerns will be attracted to the city beautiful."

The speaker described the various centers from which real estate values radiate. The city's main center, he said, was at Broad and Chestnut streets, where properties are worth from \$20,000 to \$25,000 per running foot.

YOU GET WHAT YOU GO AFTER.

This applies to all things.

The young man won't get the girl he wants—if he don't go after her.

You get the kind of fish you go after. Large fish do not live in small ponds.

And so with contracting.

If you hang out a shingle and say you want jobbing work—that's what you are going to get.

If you are after house jobs—and go after them—that's what you get.

If you want school house work or church work or large factory work, and go after them, and just that class of construction—that is the kind of work you will get.

So if you want to specialize—if you think you can do better on one or the other kinds of work—go after it but go after it strong—you will get it—for you get what you go after.—"National Builder."

HE HAD A LOT OF SENSE.

There was an old geezer, he had a lot of sense. He started up a business on a dollar-eighty cents. The dollar for stock, and the eighty for an ad brought him three lovely dollars in a day, by dad! Well, he bought more goods and a little more space, and he played that system with a smile on his face. The customers flocked to his two-by-four and soon he had to hustle for a regular store. Up on the square where the people pass, he gobbled up a corner that was all plate glass. He fixed up the windows with the best that he had and told them all about it in a half-page ad. He soon had 'em coming and he never, never quit, and he wouldn't cut down on his ads one jit. And he's kept things humming in the town ever since, and everybody calls him the Merchant Prince. Some say it's luck, but that's all bunk—why he was doing business when the times were punk! People have to purchase and the Geezer was wise—for he knew the way to get 'em was to advertise.—E. F. McIntyre in "Furniture Journal."

The trouble with some advertising is that it is like the conversation of certain people—it never says anything.—"Novelty News."

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And thererore is
A goodly thing to try.

—Ex.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.
—Exchange.

He would save the commission of the architect, but ruin the store.

BUILDING ZONE LAW.

In many civilized countries a man is by law and good conscience required to so use his property as not to injure his neighbor's property, light, air and health. This is not only regard for the rights of neighboring owners and their properties, it is an acknowledgment of the community interest by the public in such properties; in fact, in all that pertains to the persons and properties within its jurisdiction.

But this has not been either the law or the common logic of American cities and American property owners. For some insecurable reason, attached possibly to the fictional traditions of the term "lierty," we have deemed ourselves helpless to restrict the use of all property and the exercise of human liberty to such a rule of private conduct as common sense and the principles of equity and the public weal should dictate. The most brutish owner of real property has often been permitted to violate a neighborhood or destroy a neighboring property y arrogantly or wickedly transforming his own property into a nuisance or something worse. He has also been permitted to employ his properties for purposes avowedly villainous! And the great cities of this too free land have permitted themselves to be built into heterogeneous masses of intensified unsightliness—a menace to private security and to public health.

But the worm has turned!

New York City has finally done in the year 1916 what it should have done before the Civil War.

It has enacted a Building Zone Law—a law in which every citizen has a vital interest.

When will other American cities under take reforms that all realty owners will welcome?

—"Realty."

FROZEN WATER PIPES.

Many winter fires are caused by ill-advised attempts to thaw frozen water pipes. A burning match, torch or open flame of any description should never be employed for this purpose. To wrap the pipes with oil-soaked rags and set them on fire is worse than folly; it is incendiarism. Pipes are almost invariably adjacent to walls or partitions where there is an ascending current of air to feed and spread a flame. Even if the flame does not start a fire its sudden local heat may cause the pipe to break and flood the premises with water.

Wrap the frozen section of the pipe with cotton cloth and pour hot water upon it (even if the hot water must be obtained from a neighbor) until the ice in the pipe gives way. Rags on the floor at the base of or under the pipe will absorb the waste water. If the freezing is too severe to yield to this treatment send for a plumber.—"National Fire Protection Association Bulletin."

VOLUME XXXII
Number 5

PHILADELPHIA
January 31, 1917

As The Editor Sees It

NEW YORK City is taking up the question of the establishment of set-back lines in connection with the laying out of street systems in at present wholly undeveloped or suburban residence sections.

It is claimed that the use of the set-back plan would in certain cases very greatly reduce street opening and paving costs to be borne by the property owners, and also reduce future street widening expense both to the owners and to the city. Mr. Whitten, Secretary of the New York Board of Estimate, states in his report that:

"New York City has made little use of a method which is coming to be recognized as essential to good street planning, namely, the establishment of set-back lines. The set-back line secures on certain streets a uniform set-back of buildings from the street line; that is, the owner is compelled to leave a yard or court across the front of his lot. He may use this yard for any private purpose but may not build upon it.

"In a private residence section a uniform set-back from the street line increases the attractiveness of the section and adds to the health and comfort of the inhabitants. It improves light and air conditions; makes possible the front lawn with trees and shade; removes the dwelling further from the noise, fumes and dust of the street. Where residences are uniformly set back from the street without the establishment of a legally binding set-back line, each owner is at the mercy of his neighbors. A voluntary set-back of this kind is often worse than no set-back at all. A single owner by disregarding the set-back line may ruin the entire block.

"Purely local residence streets having a set-back line can be permitted a narrower width than could otherwise be allowed. This reduces development ex-

penses, not only in its economy of land but more markedly in the decreased outlay for paving. With a 10-foot set-back a standard 60-foot street might be reduced to 40 feet. This might be adequate for streets under 800 feet in length if developed with single family houses. If later the single family houses were replaced by three or four-story apartments, the street could easily be widened to 60 feet to meet the increased traffic requirement incident to the more intensive housing.

* * *

THE existence of the set-back line will permit the economical widening of traffic arteries whenever traffic needs require. It introduces a measure of adaptation and elasticity in street design that is of immense importance in view of the almost prohibitive expense of widening a street once laid out and improved.

"The fixing of the set-back line now is the only practical method by which the widening of many traffic arteries can be secured in the future when greater width will assuredly be required. These arteries are now residence streets and the houses have been set back in order to provide lawn and shade and to remove them from the dust, fumes and noise of the street. They cannot be widened at present, as the cutting off of the front lawns would in large measure destroy the value of the dwellings.

When, however, traffic has so increased that the street must be widened it is more than likely that the street will be no longer desirable for private residence purposes and the private dwellings will be replaced either by apartments or by business buildings. The set-back line can therefore be established while the future traffic thoroughfare is still a residence street, with advantage to all owners, and when the time comes to widen

the street to meet traffic needs, the set-back can be taken for street purposes, and this, too, will be to the advantage of the owners. By thus imposing the set-back line and then widening the street at the very time that these things can be done with the greatest advantage both to the owners and the city, the traffic artery can be secured at a minimum expense.

* * *

THE establishment of set-back lines will serve to supplement in the effective way the Building Zone plan recently adopted. One of the main purposes of that plan, that of securing more open space about dwellings, will be directly furthered by the set-back line.

"In Washington, D. C., and in a number of the cities and towns of Connecticut and Massachusetts, set-back lines are established under procedure similar to that used in the laying out, opening and acceptance of streets. In Massachusetts, Boston has made considerable use of the set-back line, but the greatest progress has probably been made by the town of Brookline. As to new streets, that town has adopted the policy of making the establishment of a set-back line a condition precedent to the acceptance of the street by the town. The set-back lines established vary from five to twenty feet, the average being about ten feet. The town has also established set-back lines on a considerable number of streets already opened and improved.

"Although the city's present powers of condemnation and assessment for street and other purposes are apparently quite broad, some legislation may be required fully to carry out a set-back line program. The set-back line procedure should follow in a general way the present methods as to the laying out, opening and acceptance of streets. Set-back lines

**DRAWING
MATERIALS**

**BLUE
PRINTS**

should be laid down, where appropriate, as a part of the tentative and final maps submitted by the borough authorities and approved by the Board of Estimate and Apportionment. When the street is opened the opening proceeding should include the establishment of the set-back line. The establishment of the set-back line as laid out on the city map should be a condition precedent to the acceptance of the street by the city; or to the approval of the map of a land subdivision for record. In parts of the city where no map has been approved the acceptance of streets and the approval of land subdivisions should be subject to the establishment of set-back lines wherever reasonable and appropriate.

* * *

A street once established is one of the most permanent and unchangeable features of the city structure," concludes Mr. Whitten. "Buildings have come and gone, but the street lines of Lower Manhattan have retained most of their original idiosyncrasies. This, too, in spite of the fact that the burden imposed differs greatly in character and magnitude from any that could have been contemplated at the time these streets were opened. This points to the desirability of introducing adaptability and elasticity in street design. The set-back line is a means of securing such adaptability and elasticity in a considerable measure.

"When we consider the practical impossibility of materially changing the street system once established and improved with expensive buildings and when we consider, too, how imperfectly we can foresee the demands that will be made upon the street system even fifty years hence, the importance of making the greatest possible use of the set-back line as the most effective means of securing adaptability to increasing or changing street requirements is apparent.

"Prior to consolidation set-back lines were established on a number of streets in Brooklyn by special act of the Legislature. In suburban developments it is now quite customary to establish set-back lines through a restrictive covenant in the deed—usually for a limited period of years, but sometimes running with the land. In many other cases the set-back is established by voluntary action and its retention is dependent on the will or whim of each individual owner. The city should take advantage of the opportunity afforded by existing voluntary and temporary set-backs to secure the future economical widening of streets where needed and to secure the permanent retention of a reasonable and appropriate open space between buildings."

THERE is a strong probability that a new plan of taxing real estate, one based upon scientific methods of arriving at assessable values, will be among the new legislation at Harrisburg this session. A bill recently introduced in the Massachusetts Legislation by William A. Bartlett is to be, it is said, the model after which Pennsylvania Legislation on the subject will pattern.

This measure is described in "Practical Politics" as framed for the purpose of introducing in the State of Massachusetts "a scientific system of assessing real estate to prevent collusion between assessors and big corporations or others." The Bartlett bill is said to be "the most comprehensive taxation measure ever filed for the consideration of the Legislature of Massachusetts." It provides in the main for accurate measuring of all lots and buildings, and for the establishing of assessing values which shall apply to all property in the same territory. The author of this measure is quoted as saying "that the assessing of real estate now is purely a matter of guesswork and the big corporations and those who are friendly with assessors generally get the better of this guessing, to the disadvantage of the small property holder."

* * *

THE Bartlett bill provides for the separate assessment of land and buildings, and in this respect it is following the lead of most of the great cities of the country with the exception of Philadelphia. Even a town of the size of Trenton, N. J., has adopted the plan of dual assessments, which has so many points to recommend it that it is really surprising it was not universally adopted years ago. There is nothing in common between land and buildings. Indeed, the factors which enter into the consideration of the value of land and buildings are so opposed to each other that nothing but confusion and inaccuracy can result from any attempt to combine them, as is done or is sought to be done in the appraisal of a property as a whole. Land, with the exception of fluctuations in value, due mainly to the shifting of population, always increases in value with the inevitable growth of population, while a building, however well constructed, begins to deteriorate in value from the moment it is finished, even earlier, and in the very process of construction, as all builders know. These two irreconcilable attributes of land and buildings are sufficient in themselves to induce separate consideration of them in the work of appraisal, whether it is for the purpose of fixing a just selling price or fair valua-

tion for taxation purposes, both objects, indeed, being practically identical.

* * *

REPRESENTATIVE BARTLETT when he describes antiquated methods of fixing assessments as "largely guesswork" is not far wrong. They could not be much else. They were nearer right forty years ago than they are today, but they were more tolerable, and they are still accepted or tolerated in small and growing communities, where the value of real estate has not yet begun to be standardized as it has in the large cities. There is not much difference of opinion among real estate brokers, property owners or assessors as to the value of property, for instance, on Market street between Tenth and Juniper streets, but great differences of opinion will often be found on the value of property in sections of the city where real estate values have not been subjected to the processes of analysis and discussion which many sales of real estate at very high figures in the central section have evoked in recent years.

The separate consideration of land and buildings as provided by the taxing system of New York and many other large cities, which Representative Bartlett desires to see enforced all through Massachusetts, is not a complete remedy for all the inequalities and injustices of which the taxpayer rightly complains, but it is distinctly a step in the right direction, as many communities have recognized, once they have adopted it. It has the one great merit that it compels analysis on the part of the assessing power and invites it on the part of the owner, and with a closer and more analytical study of the value of grounds as distinct from buildings many of the inequalities complained of by the taxpayer will automatically disappear.

* * *

THE Zone idea seems to be growing in public favor. Commenting on a decision of the United States Supreme Court upholding the "billboard ordinance" of Chicago the Philadelphia "Evening Bulletin" remarks:

"In substance the ordinance prohibits the maintenance of billboards in residential squares or blocks, except by the consent of the civic authority and recognizes the right of protest on the part of the neighborhood. The Supreme Court upholds the contention that the billboard may be a nuisance within the definition of the law, and though its offence may be only to the eye, an individual may be prohibited from utilizing his property to the detriment of the neighborhood interest.

"The broader significance of the Court's decision is in the recognition of the neighborhood right to protect itself

against all nuisances, even if they cannot be identified as positively menacing to public health or safety, carrying with it an intimation that there is what may be described as a right of comfort and of decency and of residential conditions which may be defended against invasion.

The authority of zoning commissions to define and restrict residential districts rests on this principle. If it were fully recognized there would be no occasion to argue whether pigs or piggeries were healthful. A noisy garage would not be permitted at will to disturb the sleep of

an otherwise quiet community.

In effect, the decision would seem to recognize the theory that after a section of a city has become established as a residential district and people have been induced to come there and have invested in homes, it is beyond the prerogative of any individual owner of property to change his mind and purpose and do what he pleases with his possessions, regardless of the rights which his neighbors have acquired in good faith and have enjoyed for such a period of years as to be regarded as vested and not ruthlessly alienable."

the rate of \$128 a ton. The McClintion-Marshall Company bid \$136.60 a ton.

State Senator Edwin H. Vare received a contract from Director of Public Works Datesman, in the shape of an award covering a concrete sewer and all other preliminary work in connection with elevating the railroad tracks on South Twenty-fifth street, part of the South Philadelphia improvement plan. The contract price is \$230,998.20.

Besides constructing the sewer, Senator Vare will lay pipe and wire connections underground, and grade and pave Twenty-fifth street and adjacent thoroughfares affected by the grade crossing removal work. He was the lowest of a half dozen bidders. The next lowest bid was \$248,000.00, by the McNichol Paving and Construction Company.

* * *

The Metal Club, of Philadelphia, composed of the wholesale distributors and manufacturers of tin plate, held its annual banquet at the Bellevue-Stratford on Thursday evening.

* * *

The Walnut Street Business Association will award silver cups for the finest displays in the observance of Municipal Flag Day, March 27th. One will be awarded to the business organization whose members make the finest display of city colors, and the other to the firm making the best individual display. Mayor Smith will head the committee of judges.

EDITORIAL NOTES

The Philadelphia Chapter, A. I. A., and the T Square Club have issued a circular of information for the twenty-third architectural exhibition to be held in the galleries of the Art Club, March 7th to March 25th. The committee in charge calls for exhibits consisting of drawings, models and enlarged photographs of executed or proposed work, illustrative of structural, decorative and landscape architecture; sketches and paintings of decorative subjects, and executed work in applied arts. Entry slips must be received by Wednesday, February 7th, and exhibits must be ready for collection not later than Wednesday, February 28th. For further information write George Howe, chairman, 205 S. Juniper street.

Nearly four-fifths of the men injured in the state's industrial establishments during the last year have been cured within a period of two weeks after the accident by proper medical attention, according to Harry A. Mackey, chairman of the Workmen's Compensation Board, who spoke before the Philadelphia Safety Council at the Franklin Institute.

"Of the 255,722 persons reported injured to the Bureau of Labor Statistics, nearly 200,000 men have been so successfully treated by free medication that their injuries have not become compensatable," said Mackey. "This is the biggest thing which the compensation system has done."

During the year which closed on January 15, 1917, 2587 men were killed in the course of their employment. Agreements or awards covering 58,189 cases were approved by the compensation board. There was paid out during the year \$1,355,399.43 for disability, with 1308 death claims allowed by the board. These claims provide for the ultimate payment of \$3,122,450 for the dependents. During the year there has been

actually paid out to dependent widows and orphans of men killed in industry \$166,609.59.

Here are the twelve commandments for business success as laid down by Frank R. Chambers.

1. Don't think success means making money.
2. Don't play office politics.
3. Always have a sense of humor.
4. Don't fear criticism.
5. Have faith in higher things and come up to them.
6. Don't be jealous.
7. Don't be mastered by dislikes.
8. Don't do the easiest things because it is easiest.
9. Don't like anyone too well.
10. Keep physically alert.
11. Always do more than you are paid for.
12. Criticise yourself.

The first step in the development of the Philadelphia Navy Yard as the biggest naval shipbuilding plant in the country was taken when bids were opened in Washington for the construction of a crane runway for the new building slip. Plans for the slip will be ready in about six weeks.

Only two bids were submitted for the construction of the crane runway. The American Bridge Company was the low bidder, their price being \$640,000, or at

BUILDING COMMENTS

Specializing.

Some contractors prefer jobbing work—others like house jobs best, still others want large jobs.

It's all as they get used to it. To the contractor who is accustomed to large jobs, jobbing work is difficult and hard to handle.

His mind has been set on large things, so he says, and yet is not the large thing made up of many "petty little things."

Really would he not be better off if he would get used to these "little things."

The chances are he don't watch them close enough. The jobbing contractor makes a good living on just what the big job contractor avoids.

Maybe he lets a lot of good money slip through his hands just because he can't set his mind on "little things."

To fail on the little things is to fail on the big things.

Estimating.

There are four things to think of and to include in estimating each and every job.

- 1—Materials.
- 2—Labor.
- 3—Overhead.
- 4—Profit.

The value or cost of the materials in a job is not hard to get.

If you have a time-keeping system the labor cost is not difficult to determine.

The question of overhead is necessity and too often forgotten.

How much it costs you to do business is important to know.

The man whom you do work for should pay your overhead expense, and then on top of all a profit should be added.

The contractor, knowing the first three things, has his exact cost, and the profit depends on what you think you should have.

Don't fail to consider—materials—labor—overhead—and profits.

Then you will succeed.

Losses and Profits.

The contractor who sublets all his work and then adds the total of the subcontractor figures a measly 10 per cent. as his profit, will not make much headway—nor money either.

The contractor who does most of the work on the job—subletting only parts of it—and who adds but a ten per cent. to the total cost without adding an "overhead expense" cannot make money.

Manufacturers in all lines are learning that the overhead is a part of the cost—they formerly thought this should be deducted from the profits.

Frequently they found that the overhead was greater than the profits—which meant losses.

Things are changing.

Are they being changed in the contracting business?

How do you figure?

Are you doing it on the new plan?

Clean Up That Job.

How often do we see contractors holding up the settlement of a job in not completing it.

There is some little thing still to do—not much but enough to call the job uncompleted or the owner has found fault with some part of the work. It's just a little thing—it must be done sooner or later to get all the money due, but the contractor has become peeved, he don't think it's part of the contract, and don't see why he should do it. He would rather lose all he has coming than to give in to the owner—and fix up the small thing that would cost him little.

What nonsense.

Who loses? Why, no one but the contractor. Some of the owner's friends soon learn of it and it gets abroad.

Does this help the contractor get more jobs?

Well hardly—it costs him a reputation for business ability.

Friendships.

Doing business with friends is a rather delicate proposition.

If we can't make a profit on our friends' business where shall we make it?

He would not be much of a friend—who expected you to lose money or come out even on a job you did for him.

Have a friend in the hardware business. Need a knife. I go to him expecting he will sell me the knife at cost.

Why should I think this?

Why should he not say: "Well, he is a friend of mine he ought to pay me a greater profit."

He has just as much right to think that as I have to feel that he should sell me cheaper.

So the best way to sell your friend is to put him on the same basis you do the stranger who enters your place.

Let your friend pay you a profit—and you pay him one.

Don't Take On Too Much Work.

An old Building and Loan Association secretary says—"that when he sees a contractor getting a lot of jobs while other contractors have little to do, he watches that fellow very closely for he knows that he must be low to get the many jobs, and has observed that a contractor with a lot of work on hand can't build as cheaply as can the one who has one building and works with his men on the job."

Now there is a good deal of food for thought in that statement.

Men work better when the boss is around. They accomplish more because the boss is there to give information and tell what is to be done next.

Workmen will do ten per cent. more work when the contractor is working with them—and ten per cent. less when he is not there.

This means that you are ahead twenty per cent. on payroll when you hang around with your men.

The real money making contractors are those who take one joke at a time, work with their men, getting a day's pay for themselves out of the job and then find when the building is finished that they got more for the job than it cost—which means they get their living and have money in the bank.

Your Competitor's Rights.

How often do we feel that our competitor has no right to exist and should quit business. And all the time he is thinking the same about us.

And thus the position of both is the same, and each has the same right to live and grow as the other.

The only thing to do, therefore, is to make the best of the situation and not make it hard for yourself in making it hard for him.

To get out and fight him on every job is doing yourself much harm, for in making your price away low so he does not get the job gives you a lesser margin than you are entitled to.

Should he still get the job away from you, it only establishes a low price basis, and the owners of the jobs get your profits.

Only one man can get the contract. If he gets one at a good price the chances are you, too, will get one at a profit making price.

We so often see that the contractor known as "the high price man" gets along very well and has money to pay his bills.

There is more honor and more profit in being classified as a high price good work contractor than in being the low price low grade kind.

Insist upon Details.

Where details are to be provided, it is not good policy to figure on the job without having them at the time.

No estimator is good enough guesser to hit it right, and it is not fair to the contractors or material men to expect them to interpret the details and make accurate proposals.

To say that the architects have a motive in selecting estimate on uncompleted drawings would not be correct, but it is easy to see that a few architects are against having plans misconstrued.

There is a case in mind where the details had not been provided until after the work had been let. The details were more elaborate than would be expected, and the architects was criticised for not providing details in advance. His reply indicated that his motive was dishonest, for he stated that the work would be figured too high if the details were made beforehand, and thus do the contractors and material men suffer, for the architect places himself in as the arbitrator and his word is final.

This, of course, will be corrected as soon as all contractors decline to figure only where information is complete when proposal is made.

Let that time be soon.

—E. P. Hoerr, in "National Builder."

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residence, Queen Lane Manor, Philadelphia, \$3,000. Architect, Samuel D. Hawley, 2d, Queen Lane Manor, Philadelphia. Owner, name withheld. Brick and plaster, 2½ stories, 25x46 feet, slate roof hot water heating, electric lighting, hardwood floors, tile work. Plans in progress. Architect will be ready for bids in a month.

Sewers and Sewage Disposal Plants, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Dept. of Public Works, Geo. E. Datesman, director, room 416, City Hall, Philadelphia. Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 6

PHILADELPHIA
February 7, 1917

As The Editor Sees It

THE advanced cost of labor and material, it may be interesting to note, has affected adversely lines of activity other than building. The office building and apartment house owner, for example finds it difficult to maintain the equilibrium of his investment with everything from the coal that heats his tenants up to the dapper little chap in brass buttons who chauffeurs the "lifts" costing more money than they did a year ago.

"Most of the office buildings downtown," said B. E. Martin, President of the Building Managers' Association, "are now paying from \$14.50 to \$15 a week for good elevator operators, which represents an increase of \$2 within the last six months. In some buildings the pay is higher. Porters are getting about \$13 a week. The women cleaners who work a few hours a day are getting an average of \$6 a week. Up to a year or so ago the general rate was \$4.50 to \$5.

"This scarcity of help is due to higher wages obtained at the munition factories near the city. I know of an old porter who was receiving \$12 a week for several years. He is now in a factory at Bridgeport, where he gets \$21 a week. This is no isolated case and hundreds, perhaps thousands, of former workers in the buildings and apartment houses of New York have left their old jobs for factory work. Some of them are wise enough to realize that their present remunerative jobs will not last forever and have applied for their old positions when the war is over. There will be plenty of help then, doubtless, but meanwhile the subject is a difficult one and scores of inefficient men are being employed who would not be taken at the wages they demand under normal conditions."

EVERYTHING which enters into the building upkeep has advanced. Coal is the greatest expense now. For what I formerly paid \$3.75 a ton, the general price for a long time, \$5.50 must now be paid. Even common brooms, formerly \$4 a dozen, are now \$5.50."

Managers of the large apartment houses on both the east and west sides of the city report the same difficulty in obtaining efficient elevator operators and other help. Only a few days ago, one manager said, every employe in a large East Side house, except the superintendent, walked out and it was three days before the vacancies were filled. Despite the advance in wages, the scarcity continues.

While apartment house dwellers are going to pay from 10 to 15 per cent. more next October than for several years, this increase, according to apartment house agents, will have no effect in lessening the demand. Already the new houses nearing completion for occupancy on Oct. 1 on Parke avenue are well leased from the plans, and two were reported last week as being over 90 per cent. rented.

Of moderate-priced apartments from \$1,200 to \$2,000 in good parts of the city it is practically certain that there will be a scarcity next fall. The high cost of building has reduced the number of new houses which, under normal conditions, are ready for occupancy every year. The demand in the best east and west sections of the city seems certain to be in excess of the supply, and the recognition of this fact by far-sighted prospective tenants has caused, say the agents, the annual campaign of apartment house inquiry and leasing to begin earlier than ever known before.

IN spite of the almost prohibitive cost of labor and materials Philadelphia continues to establish new records for volume of building expenditures. Following a phenomenal year, January, according to official figures compiled by William W. Gamble, statistician of the Philadelphia Bureau of Building Inspection, shows a total of 613 separate operations, for which were issued 449 permits. The gross expenditure for the month reaches the enormous total of \$2,144,630. This, we are assured by Mr. Gamble, is the largest total of expenditure for new building in the opening month of a year since 1911, when \$2,657,480 was spent.

Following is a summary of structures of all kinds undertaken during the last month:

Dwellings, 2 story	140	\$361,800
Dwellings, 3 story	26	91,700
Dwellings, frame	4	8,650
Tenement houses	1	30,000
Manufactories	9	786,175
Workshops	5	4,980
Garages	42	61,330
Office buildings	3	100,500
Stores	2	18,500
Warehouses	5	36,000
Engine and boiler houses ..	1	5,000
Churches	1	1,400
Club houses	1	24,250
Parish buildings	1	23,000
Miscellaneous buildings..	9	12,335
Additions	67	346,600
Alterations and repairs..	174	201,240
Miscellaneous work	93	19,330
Heaters	20	8,200
Fire-escapes	6	2,850
Signs	3	790

Totals 613 \$2,144,630

**BLUE
PRINTS**

MANHATTAN ISLAND seems to be in danger of going hotel crazy. Twelve giant structures, intended for hotel purposes, are either in course of planning or under way in the big metropolis. These will represent, when completed, an outlay of approximately \$36,000,000, and will add something like 10,000 rooms to the city's hotel accommodations.

Experienced hotel men doubt the wisdom of so much hotel construction, while admitting that times are better than they have ever been. Fear that present conditions are only for a short period has caused them to urge caution. Times were when a hotel was not more than 75 per cent. full during most of the year. Some years the average has been as low as 50 per cent. But those were other years. The year just ended and the present one tell a different story, a story of a countrywide prosperity; an era which is not to die for a long time. Some hotel men are of the opinion that though caution is a good thing for a business man, it is out of place to-day. There is a scarcity of hotel accommodations in the city now.

The statement has been made that a few weeks ago 30,000 visitors found it impossible to get sleeping accommodations there and had to seek them in nearby cities and in the suburbs. The night before the Army and Navy football game New York's hotels were crowded as they never were before. Folks slept two and three in a room, and space which had never before been used for sleeping quarters was used on that night. Fear of failure to get hotel rooms kept many out of the city until the day of the game. This state of affairs would not have been had the hotel capacity of the city been less taxed by transient business.

* * *

COMPARATIVELY few New Yorkers appreciate the fact that New York has become the world's centre for many things, remarks the *New York Sun*. With Europe at war the Old World has no time for industries, trade, amusements and recreation. No other country but America can furnish the substitute, so those who have not joined the war forces for various reasons have come to America to do business and amuse themselves.

This has brought many to live in New York who never had been here. This new population lives in hotels, since it looks upon this city merely as a temporary stopping place. With Europe barred to travelers and pleasure and fashion seekers New York has become

the Mecca for this class. They are coming here every day by the thousands from the north, south, west and east. Here the business of the world is being done; here the fashion of the world is being created, and here the only pleasures of the world are to be had. New York is the centre of all things, according to many hotel men, who, in the light of this unusual situation, think that the spending of \$35,000,000 is good business and will not be regretted since a good part of this trade which has been turned to New York because of the war will remain if success crowns its efforts.

* * *

THE Advisory Council of New York Real Estate Interests is supporting the proposed amendment to the labor law with regard to the definition of a factory, as prepared by the Building Managers' Association. Many hardships are now imposed upon property owners by the strict enforcement of the law to buildings which were never intended to be classified as factories. At the present time there is hardly a building in the City of New York that would be exempt from the labor law, because a factory is defined as any building where more than two people are at labor. The recommendations of the Building Managers' Association have been gone over by the Board of Standards and Appeals, with the result that the following amendment is approved:

"In the City of New York no building principally used for other purposes shall be deemed a factory building unless the number of persons in such building regularly employed at manufacturing labor shall exceed fifteen; nor shall the provisions of the labor law relating to structural changes, plumbing and drainage, elevators, fire escapes, adequacy and means of exit, and the fire alarm systems and drills apply to such buildings, except that on appeal to the Board of Standards and Appeals, and after public hearing, other buildings having a larger number of persons regularly employed at manufacturing labor may be exempted.

"An amendment to Rule 4 of the Industrial Code has been prepared to allow existing twelve-story buildings built prior to Oct. 1, 1913, to use fire escapes as a means of exit. The existing rule only covers nine-story buildings. The proposed rule has been requested of the Board of Standards as well as an amendment for Rule 441 of the Industrial Code, to permit the use of a device on elevators and hoistways consisting of automatic trapdoors from seven to ten feet above the ground floor, supplemented by suitable warning signals."

NEW YORKERS are apparently awakening to the great need which exists in that city for modern factory buildings and model tenements in which to house the labor necessary to manufacturing enterprise. Goodwin Starrett advances the novel and interesting but entirely feasible idea that an intelligent use of capital might be made in transferring buildings of the industrial class to what are now known as slum districts—reclaiming by this means whole sections that are now eye-sores and breeding places for crime and disease. Mr. Starrett's outline of the restrictions which should govern a movement of the kind suggested are worthy perusal.

As the average cross street in New York is 60 feet wide, and as the blocks vary in width from 184 feet to 200 feet, a cardinal principle may be laid down that factory buildings should not be over the seven-story height; properly and permanently to safeguard the light of all stories; that the depth of any loft from front to rear should not exceed 70 feet on a 200-foot block. All light courts should be as wide as streets if any real value is to be given to space lights by these courts. The buildings should be built in units of from 250 feet to 350 feet of frontage separated by side yards or courts of from 30 to 40 feet in width. The buildings suggested here would be quadrangular and lighted on all sides, having double frontage with interior courts, 60 feet wide in their least dimension, separated from each other by a side yard or by service courts of from 30 to 40 feet in width.

The roofs in all cases should be made into recreation grounds, with provisions for the serving of the inexpensive meals for employees, and with wash rooms, bath-rooms, and other conveniences for the improvement of working conditions.

The buildings should be well built, and it costs no more to make them beautiful than to make them ugly.

* * *

IF this movement for "Model Manufacturing Buildings in New York" can be made effective, a similar campaign should be instituted and pushed to provide decent, clean, sanitary and comfortable tenements, adds Mr. Starrett. It is a disgrace to New York City, that vast areas of the city are covered with tenement houses that are not fit for human habitation. The city should condemn from one-quarter to one-third of all of this ground in congested areas, tear down the buildings, and turn the ground into park and playgrounds. All buildings which do not measure up to a high standard of comfortable and sanitary usefulness should be condemned and the owners compelled or assisted to build

modern tenements. It would pay in the long run.

A few public spirited citizens have demonstrated that model tenements will succeed, and such a general movement would immediately improve real estate values, and would tend to stop the great migration of residents to the outlying districts. Why should Manhattan, which carries nearly the whole burden of the cost of subways, with the consequent tax

assessments, actually pursue a policy which drives residents away? Would it not be better to use any necessary means to provide decent living accommodations in Manhattan? There is plenty of room, if a rational scheme were put in effect to provide tenements at locations reasonably related to organized manufacturing centres, and subway crowding would be relieved, and many great benefits would ensue.

EDITORIAL NOTES

A speaker at the Convention of the American Society of Mechanical Engineers estimated that \$324,000,000 worth of coal was being wasted every year, besides natural gas and crude oil. Many power plants, in his opinion, are wasting from ten to thirty per cent. of the coal burned. Such a condition should bring forcibly to the attention of building managers and others identified with building maintenance the need for greater consideration of power plant problems. If such enormous sums are being wasted, property owners should realize that the possibility presents itself of a reduction in the cost of building operation. In the final analysis this means an increase in the net income return.

* * *

The Merchants' Association of New York City have adopted preambles as follows:

I. Opposing government ownership and operation of public utilities.

II. Advocating the exclusive regulation of all railroads by the Federal Government.

The resolutions and appendent arguments have been prepared by its Committee on Transportation and put in pamphlet form. This matter will be taken before the Newlands Commission by representatives of the Merchants' Association. The Committee on Transportation has gone into this subject to great length and the matter now presented with the approval of the Association presents the results of their investigations.

* * *

The city of Seattle is to be congratulated upon the enactment of a forceful fire patrol ordinance, the rigid enforcement of which should have a marked influence in lowering the city's adverse fire loss record. The ordinance prescribes regulations for the proper construction and maintenance of all buildings and for their regular inspection by uniformed firemen under the direction of the city fire marshal. This ordinance is a distinct

and constructive document in the line of progressive municipal legislation. Copies of this ordinance may be obtained from Harry W. Bringham, Fire Marshal, Seattle, Washington.

* * *

The Turner Construction Company of

New York, Buffalo and Boston, has received the general contracts for the erection of seven big factory and warehouse buildings, in the States of New York, New Jersey and Massachusetts, aggregating several millions of dollars. They will erect the following buildings:

For the Merchants' Refrigerating Company, one of the largest cold storage warehouses in Greater New York, to be built of reinforced concrete, eleven stories in height, which will measure 330x200 feet, and will occupy the entire block between Marginal street and Tenth avenue, 16th and 17th streets, Manhattan. J. B. Snook Sons are the architects.

For Colgate & Company, at Jersey City, N. J., a six story manufacturing building of reinforced concrete to measure, 102 x 50 feet. Warren Davey is the engineer.

For the Standard Oil Company of New Jersey, three buildings at their works at Claremont, Jersey City, N. J., including a three story kiln building, 180 x 54 feet, a four story cooperage building, 150 x 100 feet, and a two story barrel factory, 200 x 100 feet. F. Abrams is the engineer.

For the W. Becker Aniline & Chemical Works, at Ditmas avenue and 83rd street, Brooklyn, a four story warehouse, 2300 x 80 feet. The building will eventually be eight stories high.

For the Quincy Market Cold Storage & Warehouse Company of Boston, an eleven story cold storage warehouse, 152 x 140 feet, on the T. Wharf property in Boston. The building will cost ap-

The convention of the National Association of Builders' Exchanges of the United States is to be held in Atlanta, Georgia, February 13, 14 and 15. Secretary Charles Elmer Smith, of the Master Builders' Exchange of Philadelphia, has sent out the following announcement to local builders regarding arrangements:

"Those of our members desiring to attend this Convention, who will signify their intention of going, by sending their names to the Exchange, will be accredited Delegates from this Exchange, and their names will be forwarded to the Convention Committee.

They can participate in proceedings at Convention, and in all entertainment extended Delegates by the Atlanta people.

The sessions of the Convention will be held on Tuesday, Wednesday and Thursday, February 13th, 14th and 15th.

Entertainment will be extended Delegates and their Ladies, during the evenings of these days, and on Friday and Saturday, immediately following the close of the Convention.

On Friday, February 16th.

The Atlanta Exchange has arranged a trip to the Blue Ridge Marble Quarries, where a Georgia Barbecue will be served. On this trip the Convention and Ladies accompanying the Delegates will be the guests of the Blue Ridge Marble Company.

On Saturday, a trip to Historic Stone Mountain.

How to Get to Atlanta.

Leave West Philadelphia, Sunday, February 11th, at 6.52 P. M. Pennsylvania Railroad, arriving in Atlanta, Monday, the 12th, at 5.00 P. M.

Or leave Philadelphia, Monday, February 12th, at 1.30 P. M., arriving in Atlanta, Tuesday, the 13th, at 12 o'clock noon.

Fare each way to Atlanta, \$19.70; round trip, \$39.40.

Sleeping car, lower berth, \$4.75; upper berth, \$3.80.

Special Train.

There will be a special train leaving Washington, over the Southern Railway, at 9.30 P. M., Saturday, February 10th, stopping in Asheville, N. C., Sunday afternoon, from 12.00 to 5.00 o'clock, where sight-seeing has been arranged,

leaving Asheville at 5.00 P. M., arriving in Atlanta at 7.00 o'clock Monday morning.

Fare for this special trip from Washington to Atlanta (including trip to Asheville) and return, direct from Atlanta to Washington, \$24.60.

Pullman charges, lower berth, \$5.00; upper berth, \$4.00, going; returning, lower berth, \$4.00; upper, \$3.20.

The time consumed in making this trip home is about 23 hours. Fare from Philadelphia to Washington and return, \$6.80.

The dining car will serve breakfast and dinner at \$1.00 per meal.

There will be a special baggage car to carry such baggage as Delegates may desire.

In order to go on this Special, names must be in by February 1st, 1917.

DURABILITY OF WOOD.

The life of a wooden structure should be much greater than is usually the case. Houses have stood on the New England coast for a long period of years and kept their condition despite their nearness to the ocean and the dampness of sea breezes.

Not long ago when an old house was demolished in Stratford, Connecticut, a lumber company secured some of the materials from the old house after more than two hundred and forty years of use. The house had been built in 1670. It was used as a garrison during some of the Indian wars, and there were secret closets built into the walls as a refuge in case of attack. The town was partly destroyed by fire, but the old house escaped to be finally demolished. Some of the shingles which covered the side of the house were obtained by the lumber company.

These shingles were of white cedar and were manufactured in the old-fashioned way by the use of a draw knife. They were nailed with the old cut nails, and in recent years the exposed surface was covered with a coat of white paint or whitewash. Every part of these shingles that remains is still sound wood. The parts that were covered retain their original thickness and soundness. They are not even rotted around the nail holes. The exposed portion has been worn down, in some places to the thinness of paper, by the wind and weather.

HOW IT IS DONE.

First Councilman—"Here's a fine-looking street."

Second Ditto—"You're right. What's the best thing to do with it?"

"Let's have it dug up for a sewer."

"But wouldn't it be proper to pave it first?"

"Of course; I thought you would understand that. Then, after it is paved and a drain put in we'll have it repaved."

"All in readiness to be dug up again for

After Convention and Entertainment in Atlanta are over:

Sunday, February 18th.

To accommodate many who have expressed a desire to attend Mardi Gras at New Orleans, a special train of Pullman cars has been arranged to leave Atlanta at 10.00 A. M. on above date. This train will be parked at the depot in New Orleans and used as sleeping quarters, thereby avoiding the necessity for hotel accommodations while there.

Round trip fare, Atlanta to New Orleans, \$15.15. Sleeping car fare, approximately \$12.00.

Leaving New Orleans at 2.00 A. M., Wednesday, February 21st, for the return trip to Atlanta, making a brief stop in Montgomery, Alabama, reaching Atlanta in time for the evening trains for the North and East.

the gas pipe? I see you understand the principles of municipal economy. And after we have had it repaired for the second time, then what?"

"Well, then it will be ready for widening. There's nothing I admire so much as system in the care and improvement of our roadways."—"Real Estate Bulletin."

A MILLION DOLLAR MARBLE ORDER.

One million dollars' worth of Carthage stone and polished marble is to be supplied by the Lautz-McNerney Stone Company, of Carthage, Mo., for use in the \$15,000,000 Hotel Commonwealth. This order for material, which is to be erected in the Times Square district of New York, will be the largest hotel in the world and Manhattan's greatest midtown landmark.

The polished marble which the Lautz-McNerney Company is to deliver will be used for interior finish and tiling. The Carthage stone will be used for the exterior of the lower stories and for the trimmings of the upper stories, which will be of light gray hydraulic pressed brick.

Charles H. Ingersoll, vice-president and active head of Robert H. Ingersoll & Bros., makers of the famous dollar watches, is president of the Commonwealth Hotel Construction Corporation, the company which is to erect the hotel. Thirty widely known merchants and financiers are to be associated with Mr. Ingersoll as directors. The hotel will be owned and operated upon a co-operative plan, with approximately 150,000 shareholders.

Starrett & Van Vleck and Beverly S. King & Shiras Campbell, two noted firms of architects, have collaborated in producing the plans of the Commonwealth.

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residences (245), Sixteenth to Eighteenth streets and Oregon avenue to Johnson street. Architect, private plans. Owners, Charles M. Weild, 1610 Oregon avenue, and Frederick S. Park, 1620 Oregon avenue, Philadelphia. Brick, 2 stories, 16x48 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owners ready for sub-bids.

Mill Building, Dye House and Boiler House, Sixteenth and Hunting Park avenue. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. (Engineer selected.) Owners, Bellevue Worsted Mills, Wistar street and P. & R. Railway. Barrett Specification Roofs

FACTORY OF
DODGE BROTHERS,
Detroit, Mich.

Architects: Smith, Hinchman
and Grylls, Detroit, Mich.

General Contractors:

W. E. Wood Company and Bryant
Detwiler Company, Detroit.

Roofing Contractors: The G. V. Candler
Company, Vaughn Roofing Company,
Detroit, and Standard Roofing Com-
pany, Chicago, Ill.

WE can't name names, but there are two other types of roofs that are offered for the large flat-topped permanent buildings where Barrett Specification Roofs are so generally used.

On the theory of securing more competition and a lower price, some architects make a custom of drawing specifications so broadly that any one of these three types of roofs is eligible, with the result that the flimsiest one, weighing 75 lbs. per 100 square feet, is occasionally selected by reason of its lower price instead of a Barrett Specification Roof, which contains 235 lbs. of waterproofing material when used over boards and 305 lbs. over concrete and is correspondingly more durable.

In the case of one type a higher fire insurance rate is sometimes an additional penalty.

Now, there is plenty of competition available if a Barrett Specification Roof is exclusively specified.

Roofers obtain their pitch and felt from us at equal prices and compete on the important items of labor, gravel, slag or tile, etc., involved in laying them.

If you want a cheaper, lighter and less permanent roof, specify that kind; but if you want a permanent, heavy, twenty-year-minimum roof that will take the base rate of fire insurance, and carries a 20-Year Surety Bond, specify a Barrett Specification Roof—and see that you get it!

Every architect knows that if he allows "white pine or hemlock," it will be hemlock.

If he is equally charitable to several grades of roofing, it will be the poorest and cheapest.

Specify specifically!

20-Year Guaranty Bond

We are now prepared to give a twenty-year Surety Bond Guaranty on every Barrett Specification Roof of fifty squares and over in all towns in the United States and Canada of 25,000 population and more, and in smaller places where our Inspection Service is available.

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us *without charge*.

Our only requirements are that the roofing contractor shall be approved by us, and that The Barrett Specification, dated May 1, 1916, shall be strictly followed.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

FIRE CHIEFS SAY

ROOFING TIN

is the most efficient fire resisting covering for roofs, as has been proven by actual fire and by tests.

"MERCHANT'S OLD METHOD"

has been the accepted standard quality roofing plate for the last quarter of a century.

When properly applied it makes a light clean sanitary roof which is durable, lasting and thoroughly storm proof.

Open hearth copper bearing base. Very heavy coating. Palm oil process.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 7

PHILADELPHIA
February 14, 1917

As The Editor Sees It

MANY things notable in the world of man have come to us out of the pressure of circumstance. New York built the first skyscrapers because the cost of the land was so great that only by building high into the air could the owner figure a return on his investment. The skyscraper jumped into vogue and to-day is regarded by foreign authorities as the most distinctive type in American architecture. The skyscraper was made virtually possible by the passenger elevator. Without a quick, safe, and convenient means of transporting visitors to the upper floors the skyscraper could never have realized its present popularity. So that we owe the skyscraper, rated the most individual of our architectural achievement, to two factors, the perfection of the elevator system and the high cost of New York realty.

* * *

Another tremendous step forward, architecturally, is likely to grow out of the limitation placed on the height to which buildings of the skyscraper type may be carried, under New York City's new zoning regulations.

Under these regulations the height of a building is limited by the width of the street on which it is to front.

In other words, if a street is 60 feet wide one and one-half times the width of that street or ninety feet is the height limitation of the front wall. But by carrying the next wall back from the house line in the ratio of one foot horizontally to three vertically one may rise to the loftiest altitudes. The primary object of these "set-backs" was to insure a reasonable amount of light and ventilation to surrounding properties.

Incidentally, quite incidentally, they are destined to lend a new architectural grace, dignity and impressiveness, to the

tall buildings of the future. Mr. Francis P. Schiavone, a distinguished New York architect, touches upon this phase of the new height limitations in a recent article on the subject in *The Real Estate Record*.

* * *

WRITES Mr. Schiavone:

"A coming feature of New York's architecture which will be stressed more and more in future years is the set-back or break in the elevation. It is bound to work a revolution in the appearance of the new tall buildings and to give architects new opportunities. In hotels this set-back will become a roof-garden, an open air dining room in summer, a solarium in winter. In apartment houses, where it will be less used, it will become a balcony and a play space for children. In addition it will serve a most valuable structural end as a place where a necessary pipe gallery may be hidden without adding to the height of the building. This gallery may be made easily accessible through doors in the walls of the story at the same level.

It is not predicting the impossible to say that the wonderful effects to be obtained by flood-lighting and the opportunities provided by these set-backs for the efficient location of the lighting units will result in the design of the details of the facade to cast effective shades and shadows from these new sources of light, new rivals of the sun. All our architectural detail is designed for a high light-source, the sun and sky, but with night life in New York so important, the lower light-source will well repay recognition.

The future holds many opportunities for the designer who will grasp the possibilities of the new architecture. While it is yet new it presents difficulties due

to the unfamiliarity of the architect with its limitations and its latitude. But it will not be long before Manhattan, now famous for its tall buildings, will be noted for the beauty, novelty and diversity of design of its new skyscrapers." Due entirely, it may be remarked, to pressure of circumstance in the shape of the new zoning regulations.

* * *

THAT brilliant and well-informed writer on architectural subjects, Mr. C. Matlack Price, has an article in the current number of *Arts and Decoration*, on "Possibilities in Picture Building—An Unexplored By-Path in Architectural Thinking." In this very readable consideration of architecture, as a means to the attainment of the picturesque, Mr. Price goes, at some length, into the question of how far it may be permissible for the designer to consider his project simply as one unit in a finished picture. But suppose we let Mr. Price state the proposition in his own way.

* * *

TO say, or think that an architect may build a picture just as an artist paints a picture, or a writer composes a poem, should not, by rights, come to us as a strange, weird or far-fetched idea," says Mr. Price. "No one will deny that painting, writing, architecture and all other creative impulses, have all their essentials in common. Their aim is to produce something which is beautiful, or expressive or interpretative (or all three), and the media by which each art seeks to attain the great common end will be found to be surprisingly similar—identical in intent, while differing in actual material form.

Let us confine the analogy to three kinds of artistic expression: painting, writing and architecture—and we will

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

see at once that any great work in any one of these directions will have been inspired by genius, compassed by vision, enlightened by imagination and thinking, and accented by virtue of mastery of media, whether pigments, words or bricks. This mastery of media is familiar to the tongues of art critics (meaning painting-critics) in the term 'technique.' In the field of writing it is usually called 'style' (a comparatively meaningless term)—and in the field of architecture it is not thought of by any name because it is not thought of at all. It is an unfortunate fact that no one but an intelligently discriminating architectural critic (if such exists) allows his vision to comprehend the different kinds of technique which might have been applied to a given building as an aid to determining its actually existing merit or failure.

* * *

IT has become a habit to confine critical thought in architecture to the concrete which is so great a mistake that it might almost be called a calamity. One reads critical praise of a country-house designed in the Tudor style, for instance, but the criticism has no more value or accuracy than a distant view from a speeding motor car. At best it may discuss the merit by the technique with which the style was rendered, overlooking the important fact that the house in question should not have been designed in that style; that the architectural error was not one of technique, but of failure to grasp the basic architectural idea which should have been expressed.

"The architect is (or should be) doing more than issuing instructions for a crew of laborers to pile up some building materials and do a bit of carpenter work. He should be building a picture as essentially a work of art as the painter's canvas, and though he has not the painter's advantage of doing the thing with his own hands, its undertaking should not be approached differently.

"The architect's picture, it is true, is a far more different thing than the painter's, as well as an easier thing. The painter must simulate reality, or an expression of it through dexterity in overcoming the limitations of two dimensions, on his flat canvas. Where perspective and distance and texture and color must be contrived by skillful artifice.

"When he has laid down his brushes, however, the thing is complete and by the success or unfitness of its contrivance, it is an accredited work of art or a failure. And it can be seen only from one viewpoint. The architect proud of his own field of art must feel a sincere appreciation for a good painting, which

is the work of his brother in another field."

* * *

THERE are, on the whole, more architects who intelligently appreciate painting than painters who intelligently appreciate architecture. The painter may admire a finished building, and even find it worthy, of transference to canvas, but his admiration, he must admit, is rather a superficial thing. After all, it is only a picture, and it is safe to say that he does not stop to think of the ability and imagination and ingenuity and artistic inspiration which were demanded of the architect in the *building* of that picture.

"Unlike the painter, the architect was working with real perspective, real distance, real textures and colors. He could not devise a building which was pleasing, or a 'good picture' from but one point of view. Neither could he guarantee for his client a certain color for the sky, harmonizing with the walls and roof, and the same throughout the year. His materials were actualities, and his task one of expressing something near an ideal with these as material media. Actualities have their advantages, perhaps evenly balanced, as is true of the pigments, the fictitious media with which the painter paints his picture."

* * *

THE painter strives to paint facts with a palette of 'such stuff as dreams are made of,' while the architect strives to paint the dream with a palette of hard facts, such as stones, bricks and slate. Yet both are striving to do the same thing—to create a work of art.

"Because architecture has not generally been accepted as a fine art in recent years, especially in this country, there are few buildings which can honestly be considered as works of art, and the architectural observer is therefore keenly stimulated when he discovers the beautiful exception in which the architect has 'built a picture.'

"Nor are practical considerations to be overlooked—for the architect they are ever present, while the painter's canvas may hang in any direction to the compass and the writer's book will read as well in any environment."

* * *

THE illustrations employed by Mr. Price to lend point to his thoughtful and suggestive paper are from photographs of a house on the New England coast, to which the designer has imparted the pictorial quality in a degree almost uncanny in the effect of its loveliness.

"Here, certainly," he concludes, "is one of those rare examples of architecture which so far transcends mere building as to occupy a place on a high level of real artistic achievement, and to prove beyond reasonable question that a comprehensive vision of art abounds in striking analogies, one of which is 'building a picture.'"

* * *

THAT architecture is, in fact, a fine art, many come to be recognized by general observers when recognition is accorded to the many analogies which exist between it and other forms of expression more commonly regarded as 'artistic.'

Design, composition, color technique—all the component parts of art which are united to express a beautiful idea or a beautiful necessity, are conjoined in the practice of architecture and to them are added practical consideration from which painters, writers or musicians are free. The architect must retain his artistic vision through a prolonged preoccupation with business dealings and technicalities of plumbing, heating and general construction—must be a human paradox, making beautiful pictures with one hand, and making accurate mathematical calculations with the other. And because a human paradox is a genius, and the species is rare, the ideal architect is rare."

EDITORIAL NOTES

The Pennsylvania and Atlantic Seaboard Hardware Association and the New York State Retail Hardware Association are holding their joint annual convention and exhibition in New York City. The headquarters are in the Hotel Astor and the exhibition in the auditorium of Madison Square Garden. W. P. Lewis, Huntingdon, Pa., is secretary-treasurer of Pennsylvania and At-

lantic Seaboard Hardware Association, and John B. Foley, Kirk Building, Syracuse, N. Y., secretary of New York State Retail Hardware Association.

* * *

On Sunday, February 4th, the Annual Exhibition of the Architectural League of New York was opened to the public. The exhibition continues until Saturday, February 24th, and will be open

daily from 10 A. M. until 6 P. M. and from 8 P. M. until 10.30 P. M.; Sundays from 12 to 6 P. M. The exhibition is free on Saturdays, a charge of \$.25 is made on other days. The annual dinner of the League was held on February 2nd and the League reception on Saturday, February 3rd.

* * *

Daniel Guggenheim is reported to be negotiating for the purchase of the splendid estate of Howard Gould at Sands Point, one of the show places on the north shore of Long Island, known as "Castle Gould." Mr. Guggenheim's brothers, William and Isaac, own fine estates adjoining the property. Castle Gould was projected about sixteen years ago and was modeled after Kilkenney Castle in Ireland. The main building is a massive stone structure, more than 60 feet high, on ground above the Sound. Fine serpentine roads were laid out in the estate, which contains more than 200 acres. The castle is about 228 feet long by 110 feet in depth, and is surmounted by a tower and turret, which make it conspicuous from the water. On the second story is a sunroom composed almost entirely of glass. The dining room is of grayish brown oak and the library copied after the famous Bromley room, now shown in the South Kensington Museum. In 1908 the casino, near the waterfront, was constructed, containing bowling allies, a swimming pool and many guest rooms. More than \$1,000,000 was spent on the place.

* * *

The plans for the sixth annual meeting and convention of the National Association of Builders' Exchanges of the United States of America, which will be held in Atlanta, Ga., February 13-15, are now complete and according to the program every session will contain much of interest to the building trade throughout the country. Further details of the convention will be announced in a later issue.

* * *

According to figures tabulated by the United States Geological Survey, 1916, was an exceptional year for the lime industry of this country. The estimate is made that the lime produced and sold in the United States, including Porto Rico and Hawaii, in 1916, indicates a total market production of 4,150,000 short tons of this commodity, a gain of nearly 15 per cent. over the total for 1915, which was 3,622,810 short tons. The past year was the first in the history of the lime industry in which the production has equalled or exceeded 4,000,000 tons. Lime is produced in forty-three States and in thirty-one increases in production

were reported. The remaining States represented less than 6 per cent. of the total production of the country. Hydrated lime showed a gain of more than 13 per cent. over the year previous, the total tonnage marketed reaching 710,000 tons. Lime prices were generally higher in 1916 than in 1915, although in some places the increase was not important until toward the end of the year.

* * *

The structural steel industry has begun to feel the effects of the resumption of building activities throughout the country. During the past week there were contracts placed for fabricated steel for some important building operations and the inquiries denote that there are a large number of structural projects that are almost ready to be placed under contract. Among the more important bookings of the week are included: Milliken Brothers, 500 tons for the William Beckers Aniline Chemical Works, for the addition to the plant in Brooklyn; 10,000 tons for the Eaton warehouse, Toronto, Can., to be erected by the Dominion Bridge Works, from steel to be fabricated in this country; 700 tons for the Keith Theatre in Syracuse, to Harris, Silvers, Baker Co., and 250 tons to the American Bridge Co. for bridge work for the Pennsylvania Railroad Company. The new projects that are now being figured include operations of prime importance and the tonnage requirements will reach a large total. There is no question but that if the prices of building materials and supplies will come back to a normal level a very large number of structural projects would be placed under contract immediately, but it seems now as though owners are holding off in vain, as there is no prospect of a recession in sight.

* * *

The Australian Government announces the resumption of the architectural competition to select the architect for the Parliament House in the new capital city of Canberra. This competition was opened in June, 1914, and suspended in September, 1914, owing to the war. It is now reopened on the original conditions to all friendly countries (enemy subjects not being eligible), the date for receiving drawings being extended to April 30, 1917, at London and Melbourne.

Programmes can be obtained by application to the High Commissioner for Australia, 72 Victoria street, Westminster, London, or to the Works' Departments respectively of the British Dominions, or to the British Embassies at Madrid, Paris, Rome, Petrograd, Stockholm and Washington.

Outline sketch designs only are required. Eight prizes, aggregating £6,000 are offered, the first being £2,000. An international jury of the following architects are asked to make the awards: George T. Poole, of Australia; Sir John J. Burnet, of Great Britain; Victor Laloux, of France; Louis H. Sullivan, of the United States of America, and Eliel Saarinen, of Russia.

W. B. GRIFFIN,

Federal Capital Director of Design and Construction.

* * *

Philadelphia architects and builders, as well as residents who contemplate building new homes, are greatly interested in the coming National Building Exposition to be held in New York March 5 to 11, and it is likely that visitors from Philadelphia will be many in that week. Architects are especially interested in the architectural competition for a large cash prize for the best design of a house to cost a given sum.

* * *

Woolworth, "the five-and-ten man," leased a store site on Fifth avenue last week for a term of forty-two years at a rental aggregating \$4,500,000. The plot is only 27.6 x 92.7 feet. A six-story building is to be erected on the site. It is interesting to note in this connection that the Woolworth Company had in 1916 the biggest in its series of its prosperous years, the gross sales having been reported to total more than \$87,000,000.

John T. Scully Foundation Co. are using Autocars

John T. Scully Foundation Co., Boston, Mass., say: "With our Autocars we are putting out about 50 tons per day per car. They are always going. We really would not know how to get along without them. The fact is that our customers are beginning to call for Autocar delivery because they find that with these cars we are getting material to them so promptly. When Stone and Webster were building a big plant for the Boston Woven Hose Company, they told us that they did not want delivery with anything but Autocars because they could get into narrow places and dump where teams couldn't get in."

Write for illustrated catalog and list of more than 4000 concerns using Autocars in every line of business.

Dry Rot Facts

From pages 129 and 130 of Building Code recommended by the National Board of Fire Underwriters

Read what Mr. Ira H. Woolson
the Board's Consulting Engineer says about treatment
of sleepers and floors

NOTE 1.—Attention is called to the grave danger of dry rot attacking floor sleepers which are imbedded in concrete and then sealed from the air by the floor covering. Instances of rapid decay and serious damage from this cause are numerous. Well seasoned heartwood timber is best suited for this purpose, and antiseptic treatment is recommended. Coal tar antiseptics are not suitable for this purpose in most buildings. The odor and the oily surfaces are disagreeable, and the danger from fire is increased. Wood treated with zinc chloride or corrosive sublimate is not subject to such criticism.

Note.—Wooden floor surfacing should be made as waterproof as practicable. Water proof paper is sometimes used between the layers of rough and finished flooring, but this increases the danger from dry rot, unless care be exercised to have the sleepers and rough flooring thoroughly dry before sealing it down with the paper. Antiseptic treatment is the most reliable.

SAUMS PRESERVATIVE Prevents DRY ROT

Zinc chloride or corrosive sublimate, while antiseptically killing the germ, are not waterproof, therefore are no protection against checking and warping. Brush treatments of any of the above products are not permanent, as they slowly oxidize and lose their strength.

SAUMS PRESERVATIVE has a penetration of from $\frac{3}{4}$ " to $1\frac{1}{2}$ " in wood and deposits a permanent elastic and cohesive gum to the depth of its penetration. It antiseptically kills the fungi and by being waterproof prevents any germination of the fungi. In addition to other methods of rot prevention SAUMS PRESERVATIVE is permanent, fire retardant, odorless and gives added strength to the structural portion of the wood. We guarantee to prevent and stop wet and dry rot in wood for a period of five years.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

Boiler House, American street, north of Diamond street, \$1,000. Dungan-Hood Co. (O and C), American and Susquehanna avenue. Foundation for boiler.

Foundry, Hedge and Gillingham streets, \$1,400. Geo. Flint (O), Bourse Building. John Jamison (C), 2581 East Huntingdon street. New floors, alterations.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 10, 1917.—Sealed proposals will be opened in this office at 3 P. M. March 29, 1917, for the construction of the United States post office at Coshocton, Ohio. Drawings and specifications may be obtained from the custodian of the site at Coshocton, Ohio, or at this office, in the discretion of the Supervising Architect. Drawings and specifications will be ready for delivery after February 15, 1917. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 7, 1917.—Sealed proposals will be opened in this office at 3 P. M., March 21, 1917, for the construction of the United States post office at Martins Ferry, Ohio. Drawings and specifications may be obtained from the custodian of the site at Martins Ferry, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

Lithoform contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply Lithoform is much less than that required to apply a paint. The cost therefore of treating a surface with Lithoform is much less than painting it.

Per Gallon, \$3.00

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 8

PHILADELPHIA
February 21, 1917

As The Editor Sees It

A FEATURE of the January number of *The Journal of the American Institute of Architects* is the new department, edited by Mr. D. Knickerbacker Boyd, of this city, under the head of "Structural Service." Just what is sought to be accomplished by this collating of standards Mr. Boyd explains, in a "Foreword," as "the desire to help in perfecting the art and science of building and in advancing the standing of the professions, trades and crafts which are concerned therewith."

How comprehensive is the scope of this effort to assemble, intelligently and with systematic method, the very considerable number of unrelated agencies now working for standardization may be judged by mention of the circumstance that Mr. Boyd's department in the January number of the *Journal* consumes not less than fifteen closely-printed pages. The amount of correspondence, of inquiry, of research, of reference and cross-reference, involved in a task of this magnitude may be understood only by one who has essayed to bring into an orderly agreement the loose ends of fabrics alike as to texture but utterly at variance as to design. How thorough is the plan underlying this co-ordination of the agencies at work for standardization may be inferred from the sub-heads treated in Mr. Boyd's initial contribution to the work.

These sub-heads include:

Foreign governments, institutions and architectural societies.

U. S. governmental departments, professional, technical and other associations.

Testing, inspection and research facilities.

Foundational requirements, concrete piling, steel piling.

Waterproofing and dampproofing.

Cement and concrete.

Concrete fills and various top coats.

Treatment of concrete floors and surfaces.

Structural iron and steel.

Preservation of iron and steel.

In addition to review of these various subjects, considered as contributing factors to the dominant idea of intelligent and uniform standardization, there is a not less careful review of subordinated agencies working at some point or in lesser degree to the same general end. All of the information is carefully keyed so as to admit of instant reference and should prove of immense and lasting value. A phase of the work that serves to show to some extent the spirit in which it is being approached is presented in the offer of the *Journal* to furnish readers with additional sources on request—necessary condensation making compulsory the limiting of references published to the more important in each industry.

* * *

THE GUIDE begs to compliment Mr. Boyd upon the skill and thoroughness with which he has set out upon a task which, when its outlines were first brought to our notice, seemed to us to present difficulties of an insuperable character. That the work will be followed with the closest attention by architects, builders, structural engineers, material men and all others interested in honest building, is in the nature of a foregone conclusion. Unless we are much at sea in our estimate of the drift of affairs the outcome of this review must be the bringing in to ultimate uniformity and understanding, of all of the agencies official and civil, professional and lay, now laboring to reach intelligent and fixed standards

in the trades, the arts and crafts identified with building.

* * *

BY the way, or by your leave, as the case may be,—the subject of public building comes in for the major share of attention in the editorial comment of the January *Journal*. The situation in the office of the Supervising Architect, as disclosed in the annual report of June 30, 1916, shows that 269 buildings, authorized by Congress in 1913 and the spring of 1915, were still awaiting plans and specifications at the time this report was submitted. With labor and material costs advancing as they have been during the past two years it may easily be understood what modifications in design will be necessary to bring these buildings within the original estimate when they come finally to be built. In presenting the "pork" bill to the present Congress Chairman Clark of the Committees on Public Buildings and Grounds submitted with it a report from which the *Journal* quotes the following:

"It will also be noted that the bill carries a provision for the construction at such places where only the postal and civil service needs of the Government are to be taken care of, of *factory or block type of buildings* capable of being enlarged and added to as the necessities of the service may require. It has been the custom of the Government in past years to construct in small cities and towns magnificent buildings of stone and marble, which were entirely out of place and not in keeping with the surroundings, and in a great many places totally unfitted for the purpose intended. It is the view of this committee that a post office should be essentially a workshop and that it should be constructed with a view to efficiency, economy, and

PRINTS**

the comfort of the employees. . . . We believe that the time is past, and, in fact, it never should have existed, when monumental buildings should be constructed for the conduct of the postal business of the United States. As stated hereinbefore, the Committee is decidedly of the opinion that the post office should be essentially a workshop, with plenty of light, air, and space in which to efficiently and economically transact the business of the Republic."

* * *

HERE we have a renewal of the oft-reiterated congressional idea of the "Edison block house" theory as applied to the construction of federal buildings. For years a certain, unrepresentative element in Congress has been clamorous in behalf of what its votaries describe as "a standard type of building" by which they imply an economical design capable of endless duplication without reference to locality, artistic sensibility or any principle whether of art or ethics other than the mere saving of money. That this money could be much more effectively saved by omitting the unnecessary rearing in obscure villages of federal buildings the sole excuse for which is the desire of some Congressman to exploit his ability as a "pork-getter" does not seem to have occurred to Chairman Clark or his associates.

* * *

IMAGINE a nation with aspirations to cultural ideals pouring its public buildings out of a mould and you have a very fair mental picture of what the bucolic Congressman considers the proper thing to do. What does the hayseed representative care about architecture, the influence of federal buildings upon public taste, the horror of cultured foreigners brought face to face with a public building of wretched design reproduced to the point of mania!

* * *

ADEPRESSING feature of the controversy over public-building methods is the lack of any apparent comprehension of the relationship which architecture should bear to the physical needs of housing Government functions," says the *Journal*. "The allusions to the architectural element, in the press, have been pretty generally confined to sarcastic comments on 'monuments,' 'marble palaces,' and such other exhibitions of superlative democracy as have seemed best suited to convey an idea of extravagance in expenditure and an impressive disdain of all things 'impractical.' The city has howled at the village and the small town; they have replied in kind. The cry of unfairness in distribution has been raised in Con-

gress, echoed throughout the land, and re-echoed in Washington. The vital principle at stake has been lost to sight by cities and towns alike. The cities point out their large postal receipts and demand relief from annoying congestion and vexatious delays. The country places proclaim their right to consideration and accuse the large communities of selfishness and inconsideration. It reads like the tale of a scramble for largesse, rather than a discussion of a national issue which is a matter of business and nothing more, so far as the terms are concerned, and might well lead the stranger in our land to ask what 'united' means."

* * *

SHOULD the architect reserve certain hours to the salesmen who is charged with bringing to his attention the merits of materials and devices—or should he, as he does, rely upon the folder, the catalogue and the trade press for this information? Here is a question which is frequently discussed. Under the title "Are Architects Too Conservative?" Charles F. Mauer in *The Architect and Engineer* adds some new chapters to existing literature on the subject.

* * *

WRITES Mr. Mauer: "I will grant that there are some species of men posing as salesmen who will stoop to the most degrading tactics of misrepresentation, who have absolutely no regard for any man's time or privileges, who are totally ignorant of the practical uses and merits of their own products. Also, there are men who pose as architects who are not competent to properly design and superintend the construction of any buildings simply because they do not possess the technical training, a practical knowledge and experience. So it is with every other profession or business. The statutes do not prohibit any man from following any vocation he may choose, be he practically adapted for that particular line of work or not.

"The architect, the same as many other professional men, has nothing to sell but his knowledge and services. To make his services valuable and appreciated, he must know the needs of his clients and produce them intelligently, that the cost may not be excessive; he must keep up with the continual progress of the world, so that his sales may continue. If he has any other method or system whereby he can judge and criticize the merits or demerits of any material, device or method so effectively and intelligently as through personal contact and interview with the men who understand the use of them, it is a well-

guarded secret of his profession, as no business man claims to possess this superior knowledge.

"Suppose some practical mechanic has spent from three to five years of his time in perfecting some new device or method to be used exclusively in the construction of buildings, which is a decided improvement over any other device or method used for a similar purpose; or that a chemist has evolved a new building material which he has given a thorough practical time test, and that he positively knows his product is an improvement over any other similar product specified and used by the architects for the same purpose."

* * *

BOTH men know that, in order to obtain recognition of the merits of their products, they must obtain the approval and recommendations of the architects. How can they do it without personal solicitation? To introduce any new product through 'printer's ink' alone is almost an impossibility, even though finances are unlimited, which is very rarely the case.

"Let any architect examine his past record and achievements, and he will readily detect where at some time or another his client was put to considerable unnecessary trouble and expense in order to overcome defects in the construction of his building that could and would have been avoided by the architect had he devoted a little more of his time interviewing 'salesmen' in order to become thoroughly posted as to the merits and practical results of various materials and methods adaptable for overcoming that particular defect.

"The writer, while not a traveling salesman at this time, has served successfully in that capacity, and previously served as buyer in both retail and wholesale mercantile establishments. It has always been his set rule to grant every salesman an interview, to hear his story, to see what he had. If he had something new and better than any other similar products, I would consider myself under obligations to him for demonstrating the merits of his products; if they were not as good or better than old standard brands, they were not considered.

"The knowledge gained by these interviews is amazingly large and enables one to become qualified to select the wheat from the chaff, to become thoroughly conversant with the various products on the market in any line of business, and to know their merits and their weaknesses.

"So it is with the architect. If he will systematize his business so that he can shift the minor details and responsibili-

ties to the shoulders of his subordinates, he will find more spare time to devote to his clients and their interests, which can be safeguarded at any and all times only by keeping abreast with the progress of

the world; to do this, without granting the 'commercial salesman' who solicits his business an interview, is a physical impossibility for any professional or 'business man.'

EDITORIAL NOTES

The present trend of industrial building construction is indicated by a recent investigation made by W. P. Anderson, President of The Ferro Concrete Construction Co. of Cincinnati, and presented in a paper before the recent annual meeting of the American Concrete Institute in Chicago. The results of Mr. Anderson's investigation were drawn from inquiries made of the leading industries, manufacturers of all classes of metal goods, brewers, manufacturers of textiles, paper, leather, boots and shoes.

Of the representative manufacturers who were requested to furnish data 370 concerns contributed information covering 1,230 buildings erected during the period covered by the investigation. These varied greatly in size, use and construction, but all were used for industrial purposes.

The returns year by year were graphically represented in an accompanying chart for the four major classifications—all wood, brick walls (steel frame), mill construction, concrete construction. Of course, the abnormal disturbances during 1914-16 account for the great fluctuations in that period. But even up to and including 1913, the advance of concrete construction and the relative decadence of other types are distinctly noticeable. The comparative growth of the various types of building construction is most strikingly shown by comparing the periods 1905-10 and 1911-16. In the former, the returns cover 7,014,218 square feet of mill construction and only 5,152,579 square feet of concrete construction, but in the later period the area of concrete construction jumped 327 per cent., to 16,926,152 square feet, while the mill construction showed a bare increase of about 10 per cent. to 7,709,469 square feet. The estimated area for 1916 was used in making up all of these comparisons.

* * *

The thirty-second annual exhibition of the Architectural League of New York was formally opened in the American Fine Arts Building, 215 West 57th street, with the usual reception to the members of the league and their friends. The 1917 exhibition differs somewhat from those of previous years in that the various exhibits are not segregated in

separate galleries as heretofore. Architecture, sculpture, painting and craftsmanship are, in the current exhibition, to be found in harmonious groups in all galleries. The innovation is an excellent one and has done much to create a greater interest in the event that has ever before been evidenced in a function of the Architectural League.

* * *

The decorative scheme of this exhibition takes the form of a formal garden, complete with walks and growing hedges, fountains and waterfalls. The landscape effects are of high merit and add much to the setting of this important event in the art year. The decorations were designed and installed under the direction and supervision of H. Van Buren Magonigle. The Medal of Honor for architecture for this year was awarded to John Russell Pope for his design of the Temple of Scottish Rite, which was recently completed at Washington, D. C. Maxfield Parish obtained the medal for painting for his murals designed for the Curtis Building at Philadelphia and the medal for general work was awarded to H. A. McNeil for his bas-relief, "Washington, Commander-in-Chief," which was recently added to the Washington Arch in Washington Square. The exhibition will be open to the public until Saturday, February 24.

* * *

Educational in every feature, the National Complete Building Exposition, to be held in the Grand Central Palace, New York, March 5-11, will be by far the most ambitious demonstration of up-to-date building, equipment and furnishing ever attempted in the United States. It will be backed by the best expert knowledge of the country, and will exert a strong appeal to every man who is a prospective builder. Boiled down, the exposition will be a great, big, compelling argument for better building of every character.

This exposition will be but a furtherance of the movement for better building which was initiated in the First American Complete Building Show, held in Cleveland, last February. The effect of the Cleveland show has been felt emphatically the past season throughout the Middle West, and particularly Ohio,

from which the greater percentage of the attendance came. In that territory building in general the past summer was of a higher class than ever before; higher grade materials and more modern equipment were used and the gross investment was greater than in any preceding year.

* * *

Expanding beyond a mere exhibition of all kinds of building materials and equipment, the Exposition will provide instructive demonstrations of construction methods, architecture, engineering, landscaping and garden furnishment. Special divisions will be devoted to factory, commercial and general building; there will be separate displays of theatre, church and school building equipment; and the home building interest will be maintained with equal strength. In these exhibits will be especially emphasized the terra cotta, cement, metal lath, and gypsum possibilities for beauty, safety, convenience, comfort and general utility.

Negotiations are on with several associations advancing the interests of brick, tile, products, looking to community exhibits demonstrating their respective materials. Many concerns representing heating, lighting, safety devices and building materials have taken space. There will be a special machinery division and lumber will be represented by exhibits from six of the leading lumber associations of the country.

LIVING IN GLASS HOUSES HEALTHFUL.

The carpenter has finished his task and the long porch, veranda, piazza or stoop has been enclosed for the winter. The radiators, exposed to the weather five months in the year, have been regilded. Father has started a fire in the furnace. A comfortable warmth pervades the house. The French windows stand open. No one will consent to stay in the apartment known thirty years ago as the sitting room, twenty years ago as the parlor, ten years ago as the drawing room, and commonly designed as the living room to-day. Everybody has moved into the enclosed porch; the whole family wants to live in the glass house.

The popularity of enclosed verandas is recent but striking. There are certain difficulties in the way of their universal installation. They call for large—or long—radiators. The plumber, with a serious air, tells you that one square foot of glass requires ten times as much radiating surface as a square foot of plastered wall. He shakes his head as he says you will have to have a boiler two sizes larger. He specifies that the lattie work beneath the porch shall be bricked up. You agree to all his conditions because you have tasted the pleasures of dwelling outdoors the year round.—Realty.

UNFURNISHED HOUSES FOR WORKERS.

How five cities have found a unique way of housing their thousands of workers is set forth by Bristow Adams in the current number of "The Nation's Business." To house a city of 36,000 population is no small ob. To do it satisfactorily is a very big one. Add to mere numbers the complexity of mixed races and the task becomes herculean. One manufacturer sums up the situation in the two statements which follow:

"Workers will not stay in a city where they cannot live decently, particularly in view of the present demands for workers; therefore the housing problem means something to the business man who is developing his business. Building houses by wholesale means getting the result of the world's best experience, and selling the houses at the lowest cost. This means something to the business men, too, for the cheaper rent in proportion to the value, the better it is for the worker. High rent and poor accommodations promote discontent and strikes. Because of these things the business man is coming to see that it is his business to take a real interest in the character of his employees' home life."

Note that, being a business man, this person sees the problem from the business viewpoint. But note also that he begins to see it from the viewpoint of the worker, even though he is concerned with the worker's reaction on business. In the final solution everybody will see all sides through the eyes of each party concerned.

Nearly two and a half billions are spent annually in dwellings alone, and much of it not truly invested because so many houses fall short of being satisfactory.

BONUS TO TENANTS.**Keeps Down the Upkeep—Gets Longer Terms.**

Payment of annual bonuses to families occupying his houses is the plan that has been devised by a western property owner to insure proper care of the houses and to obtain and retain thoroughly desirable tenants.

After thorough trial, extending over a period of nearly 10 years, the owner of the properties asserts that the plan is successful beyond his expectations, and that its operation has resulted in reducing the upkeep expenses of the properties, practically done away with advertising cost and brought him a class of patrons such as few owners of rental properties have.

Builds and Owns Houses.

More than 10 years ago this real estate operator began to formulate his plan, the purpose of which was to offer substantial inducements to tenants to remain in his houses and to take the best of care of the properties.

Owning and building the homes, he personally attended to the details of construction and planning, and when the homes were completed he handled the renting or leasing.

The homes are in one of the large cities of the northern middle west. They are well-built houses of six to nine rooms, with bath, open fireplace and all of the modern conveniences. Well located on good streets, the properties have an annual rental of \$450 to \$500.

Details of Plan.

The plan finally adopted and put into effect was to set aside a definite per cent. of the annual rent of each house—the rent being divided into 12 monthly payments as usual—for repairs and upkeep, and another fixed per cent. for expenses of advertising, replacing tenants, etc. These funds were taken out of the rent paid for the houses and were credited to the individual buildings.

Actual cost of repair, replacing tenants, etc., were paid for out of these funds, and at the end of the year the unexpended balance of the two funds was paid to the tenant as a bonus. In case a tenant remained in a house the full year the amount that had been set aside out of the rent for advertising, replacing tenant, etc., was paid in full, and the balance, if any, of the amount set aside for repairs, upkeep, etc., was added to the bonus.

How Plan Has Worked.

The result has been that tenants of his houses take practically the same care of the houses as they would if they owned the property. It is to their interest to see that repair bills, being little or nothing, the bonus they receive will be larger.

Cost of replacing tenants, the property owner says in his statement, is usually a heavy charge against rental property. By paying to his tenants the money that probably would be spent in a year as expense for replacing tenants, reliable families are induced to lease the houses and to remain in them indefinitely.

Long-Term Tenants.

Many of the tenants have remained in the houses for 10 years—in fact, from the time the original announcement of the plan was made—while others, leasing a house since the bonus plan was put into effect, have remained tenants ever since.

The property owner now has nearly 150 houses, all of which are occupied. In addition, he has a "waiting list" of would-be tenants anxious to take any of his homes that may for any reason be vacated.—"Real Estate World."

A NEW PRIMING AGENT FOR GALVANIZED IRON.

"Lithoform" is the name of a new chemical solution that not only acts as a splendid preservative when applied to galvanized iron, arresting the processes of decay, but that causes paint to adhere to galvanized iron surfaces with a tenacity greater than that witnessed in the case of carefully primed wood. "Lithoform" when applied to the galvanized metal furnishes a coating to which paint attaches itself in such a way as to prevent peeling, flaking-off, cracking or any of the disintegratory processes common to paints applied to the iron in the absence of this valuable priming agent.

Since the discovery of Lithoform it has been thoroughly tested. The surface produced on the zinc or galvanized iron closely resembles pumice stone. It is firmly attached to the surface of the metal and slightly absorbs the first coat of paint, which on drying becomes inseparable from it; paint which, when applied directly to the galvanized iron, can be easily removed with the finger nail, requires a knife to detach it when applied after a treatment with Lithoform. Ink spilled on a surface formed with Lithoform cannot be removed even by washing. The surface formed by Lithoform can therefore be stained like a wooden surface. In fact, after treating with Lithoform, the surface can be treated as if it was an absorbent stone.

Lithoform contains no oils, varnishes, pigments or volatile solvents; in fact, it is not a paint in any sense of the word. Being a thin, non-volatile liquid, its covering properties greatly exceed that of a paint or varnish. When applied with a brush, one gallon will cover from 1,500 to 2,000 square feet. As a gallon of Lithoform will cover such a large area, the cost per square foot for material is very small, and as it requires no "brushing out" to produce an even coat, the time taken to apply Lithoform is much less than that required to apply a paint. The cost, therefore, of treating a surface with Lithoform is much less than painting it.

Lithoform is manufactured and sold by the American Chemical Company, 1118-26 South Eleventh street, Philadelphia, who will be pleased to furnish interesting descriptive literature showing tests, directions for use, etc., on request.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Church and Sunday School, Fiftieth and Locust streets, Philadelphia. Architects, Stuckert & Co., Crozer Building, Philadelphia. Owners, First Reformed Church, care of Rev. E. R. Appenzeller, 433 South Fifty-first street, Philadelphia. Stone, 2 stories, 75x130 feet, slate roof (steam heating and electric lighting reserved), pine floors, metal lath, waterproofing and dampproofing, cabinet work, tile work. Revised plans in progress. Architects will take bids in a few days.

Motion Picture Theatre (alt.), 1311 Market street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owner, Alex. R. Boyd, 1414 Spruce street, Philadelphia. Brick and steel, first floor and basement, 24x90 feet, cement floors, metal lath, fire doors, metal wainscot (hardware, heating, painting, plumbing, electric work, tile and marble work reserved). Architects taking bids, due February 21st. Hogg Const. Co., 1634 Sansom street; Stacy Reeves & Sons, 2011 Market street; Smith-Hardican Co., 1606 Cherry street; Freund Const. Co., Bulletin Building, and Lam Building Co., 1001 Wood street, are figuring.

Factory (alts.), Sixth and Columbia avenue, Philadelphia. Architects, Heacock & Hokanson, Bailey Building, Philadelphia. Owners, Henry H. Sheip Manufacturing Co., on premises. Consists of new areways, brick, concrete and steel. Architects have received bids.

Store (alt.), 23 South Seventeenth street, Philadelphia. Architect, Louis Levi, Real Estate Trust Building, Philadelphia. Owner, Leon Dalsimer, Real Estate Trust Building, Philadelphia. Brick, 4 stories, plastering and painting, metal lath, cement and pine floors, millwork (electric work, steam heating, metal bulks, tile work parquetry floors reserved). Architect has received bids.

Department Store (alt. and add.), 1031 Market street, \$20,000. Architects, Hoffman Co., Finance Building, Philadelphia. Owners, Frank & Seder, northeast corner of Tenth and Market streets, Philadelphia. Brick, one additional story, 22x100 feet, slag roof, steam heat, electric lighting, metal lath, fire doors, tile and marble work, pine floors, store fixtures. Plans in progress.

Bank Building (alt. and add.), 1700 Tioga street, Philadelphia. Architect, Adin B. Lacey, 1012 Walnut street, Philadelphia. Owners, Tioga Trust Co., on premises. Stone and brick, 2 stories and basement (add.), 19x32 feet, tin roof, steam or hot water heating, electric lighting, cement and pine floors, metal grilles, compo board, cabinet work, tile and marble work. Architect has received bids.

Apartment House (alts. and add.), southwest corner of Thirteenth and Oxford streets. Architects, Andrew J. Sauer & Co., 908 Chestnut street, Philadelphia. Owner's name withheld. Consists of changing residences into apartment house. Plans in progress. Too early for details.

Factory (alt. and add.), 482-84 North Fifth street. Architects, Andrew J. Sauer & Co., 908 Chestnut street, Philadelphia. Owners, Charles F. Datz & Co., on premises. Consists of general alterations, 2 stories, 40x106 feet, slag roof, concrete work, steam heating. Plans in progress.

Residences (41), Luray and Courtland, between Sixth and Seventh streets. Architect, private plans. Owner, Marco Marks, 508

Bailey Building and 5133 Irving street. Brick, 2 stories, 16x42 feet and 18x42 feet, slag roof, hot water heating, electric lighting, pine floors. Owner taking sub-bids.

Machine Shop and Warehouse, 943-53 North Front street, Philadelphia. Architect, private plans. Owner, Herman L. Winterer, 908 Beach street, Philadelphia. Brick and concrete, 3 stories, 70x115 feet, slag roof (heating and lighting reserved), concrete and plank floors, metal lath, rolled steel sash, fire doors, ventilators, skylights, rolling steel doors. Owner taking bids, due in one week. Wm. Steel & Sons Co., Sixteenth and Arch streets; Austin Co., Transportation Building; Harry Brocklehurst, 512 Norris street; F. A. Havens & Co., 845 North Nineteenth street; Stewart Bros., 2526 North Orkney street; H. E. Grau Co., 1709 Sansom street; A. R. Raff Const. Co., 1635 Thompson street, are figuring.

Packing Plant (alt. and add.), West Philadelphia Stock Yards, Thirtieth and Race sts., Philadelphia. Architect, C. B. Comstock, 110 West Fortieth street, New York City. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Brick, steel and reinforced concrete, 2 stories, 61x125 feet, asbestos reinforced concrete and composition roof, metal sash, waterproofing, fire doors, ventilators, reinforced concrete floors, hollow tile, elevators, rolling steel doors. Revised plans nearly completed. Owners will take bids in about two weeks.

Club House and Garage (add.), Emlen and Carpenter streets, Germantown. Architect, Richard C. Loos, 1017 Chestnut street, Philadelphia. Owners, Automobile Club of Germantown, Wm. H. Lincoln, chairman of Building Committee, 314 West Upsal street, Germantown. Ball room only, stone, 1 story and basement, 64x100 feet, asbestos shingle or slate and tin and slag roof, oak, maple and hemlock floors, pine and cement floors, metal lath, fire doors, tile and marble work (heating and electric work reserved). Architect has received revised bids.

Passenger Station, Broad and Glenwood avenue, \$12,000. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Brick and terra cotta, 1 story, 2 wings, 20x50 feet and 18x30 feet, slag roof, steam heat, electric light, metal lath, rolled steel sash, marble work, terrazzo and composition floors. Owners have received bids.

Garage (alt. and add.), 5453 Lancaster avenue, Philadelphia. Architect, private plans. Owner, John Wanamaker, Thirteenth and Chestnut streets, Philadelphia. Brick and concrete, 2 and 1 stories, millwork, cement and pine floors, relocating elevator, wire work (heating, plumbing and electric work reserved). Owners have received bids.

Club House, Oak Lane, Philadelphia. Architect, Wm. E. Groben, 6719 North Sixth street, Oak Lane, Philadelphia. Owners, Review Club of Oak Lane, Mrs. E. Clarence Miller, Melrose Park, Pa., chairman Building Committee. Stone and stucco, 1 story and basement, 40x90 feet, slate roof, hot water heating, electric lighting, tile work, cement and pine floors. Plans completed. Architect will take bids in a month.

Machine Shop (alt. and add.), 1120 Vine street, Philadelphia. Architect, Clyde S.

Adams, 1509 Arch street, Philadelphia. Owners, Philadelphia Gear Works, on premises. Brick (slow burning and joist const.), 1 story and Mezzanine, add. 18x100 feet, slag roof, plumbing, electric light, metal lath, waterproofing, ventilators, pine floors. Architect taking bids, due February 23rd. Standard Const. Co., 1713 Sansom street; John Codori, 1235 Arch street; F. S. Markland, 1500 Sansom street; Hogg Const. Co., 1634 Sansom street; Conneen Const. Co., 1829 Filbert street; Smith-Hardican Co., 1606 Cherry street, are figuring.

Church, Sunday School and Parish House (fire repairs), 3925 Walnut street, Philadelphia, \$60,000. Architects, Watson & Huckel, 1211 Walnut street, Philadelphia. Owners, Walnut street Presbyterian Church, Rev. J. A. MacCallum, pastor; Morris Williams, chairman Building Committee, Commercial Trust Building. Stone, 2 and 1 stories and basement, slate roof. Plans in progress.

Apartment House (alt.), 1429 Poplar street, \$3,000. Architect, Philip S. Tyre, 1509 Arch street. Owner, Julius C. Martin, care of architect. Brick, 3 stories, plumbing, electric lighting, hardwood floors, skylight, tile and marble work. Plans about completed. Architect will take bids in a week.

Foundry, Oxford road and Devereaux st., Philadelphia. Architect, private plans. Owners, Lawndale Steel Co., Inc., care of builder. Frame, concrete footings, 1 story, 50x112 feet, slag roof. F. W. Van Loon, Denckla Building, taking sub-bids.

Chapel and Tower, Tenth street and Northeast Boulevard, Philadelphia. Associated architects, Ralph B. Bencker and Price & McLanahan, 1418 Walnut street, Philadelphia. Owners, First Christian Church, Rev. I. S. Chenoweth, 1418 Euclid street, Philadelphia. Stone, brick and concrete, 2 stories and balcony and basement, 84x50 feet and 25x25 feet, tin, slate and slag roof, steam heating, electric lighting, metal lath, waterproofing, fire doors, tile and marble work, cement and maple floors. Architects taking bids, due February 24th. H. E. Grau Co., 1709 Sansom street; Pringle Borthwick, 8018 Germantown avenue; J. Sims Wilson Co., 1125 Brown st.; Wm. R. Dougherty, 1610 Sansom street, and Warren, Moore & Co., Commercial Trust Building; E. E. Hollenback, Inc., 1804 Brandywine street, are figuring.

Office Building (alt.), 315 Arch street, Philadelphia. Owner, Charles E. Schmidt, 327 Arch street. Architect, private plans. Lessees, U. G. I. Co., Broad and Arch streets, Philadelphia. Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted.

SOME MORE ADVERTISING "DON'T'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

REMOVALS TO THE OTIS BUILDING.

The new Otis Building bids fair to become the center of a very considerable community of the building and architectural activities of Philadelphia. Among firms which have taken quarters in the Otis Building within the past few days are the John N. Gill Company, John R. Wiggins & Co., and the Graham-Campion Company, builders, formerly of the Heed Building; Conrad T. Neff, architect, formerly of Neff & Thames, Heed Building; the Vapor Vacuum Heating Company, formerly of 1215 Walnut street, and Zantzinger, Borie & Medary, architects, formerly of Fifteenth and Walnut streets.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

Small ideas, small methods, small men are becoming antiquated. This is the day of the broad outlook and big doings.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 10, 1917.—Sealed proposals will be opened in this office at 3 P. M. March 29, 1917, for the construction of the United States post office at Coshocton, Ohio. Drawings and specifications may be obtained from the custodian of the site at Coshocton, Ohio, or at this office, in the discretion of the Supervising Architect. Drawings and specifications will be ready for delivery after February 15, 1917. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 7, 1917.—Sealed proposals will be opened in this office at 3 P. M., March 21, 1917, for the construction of the United States post office at Martins Ferry, Ohio. Drawings and specifications may be obtained from the custodian of the site at Martins Ferry, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 19, 1917.—Sealed proposals will be opened in this office at 3 P. M., March 30, 1917, for the construction of the United States post office at Reading, Mass. Drawings and specifications may be obtained from the custodian of the site at Reading, Mass., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

Lithoform contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply Lithoform is much less than that required to apply a paint. The cost therefore of treating a surface with Lithoform is much less than painting it.

Per Gallon, \$3.00

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 9

PHILADELPHIA
February 28, 1917

As The Editor Sees It

THAT old, old question of the lowest bidder and the lowest responsible bidder is up again; this time in connection with a controversy over the awarding of the contract for the pathological laboratory to be erected by the City of Philadelphia at Thirty-fourth and Pine streets.

The views of THE GUIDE on this question have been stated in these columns so often and with such clearness as to leave no room for doubt as to our position.

We have always believed, whether the project in hand be private work or work for the city, in permitting the awarding power to exercise a certain amount of discretion.

If we had, personally, a contract to award involving the erection of a building of any importance we should feel a natural hesitancy about giving the work to be done into the hands of a builder previously concerned with operative or small residence work. On the other hand, we would be, in every sense, favorably disposed to the claims of builders whose previous experience had been of a character to raise the presumption of skill and equipment.

* * *

DISCUSSING this issue recently, one of the local dailies remarked:

"The present system, which calls for the awarding of contracts to the lowest responsible bidder, is too vague and elastic to safeguard either the city or the competitive bidders. On the one hand, it is hardly just and equitable to a contractor to encourage him to submit a bid by providing him with a set of blue prints and finally accepting his bid and bond. This, of course, may mean nothing to the city, but to the contractor it calls for the outlay of at least several hundred dollars; and in the end, if his bid

should be the lowest and then relegated to the class of undesirables, it is adding insult to injury without helping his credit.

"On the other hand, there is no reason why the city should be compelled to award its contracts for the construction of its buildings to contractors who are not fully qualified to do the work. The city should have the same privilege as an individual in so far as its endeavors go to obtain satisfactory and competent contractors for the construction of its buildings.

"Under the present system of bidding a contractor who has never constructed anything except small country houses and made minor alterations and additions to a few schoolhouses is eligible to submit a bid for a city building costing \$250,000 or more. By even the greatest stretch of imagination it is hard to believe that such a contractor is qualified, either with experience or equipment, to give to the city an A1 building.

"The fact that this individual is satisfactorily bonded, honest beyond doubt and willing to do good work is no assurance that the completed building will be an A1 building. If the contractor is not qualified, try as he may, he is unable to perform the work in a first-class manner and should not be allowed to do city work out of his class until his experience and other circumstances warrant it.

"The question boils down to, What shall be done to protect both the city and the contractors regarding estimates on city work?

"The writer suggests that a qualifying system be inaugurated, let a commission be appointed, say by the Master Builders' Association, whose duty will be to classify the contractors according to their qualifications. For instance: Class A to include contractors who are competent to handle work of any size. Class

B, below \$200,000. Class C, below \$100,000. Class D, below \$50,000. From time to time any contractor should have the privilege to apply to the commission for promotion to a higher class, the result of which should be solely dependent upon his qualifications.

"The effect of this or some similar system would not only be a help to the city in getting the best possible buildings for the money expended, but also result in a great benefit to the contractors, inasmuch as the competition would be more equitable."

* * *

WE are not much impressed with the suggestion to have the Master Builders' Exchange, or any other body, grade the builders. This duty, to our way of thinking, may safely be left to the awarding power. Just as the average architect finds it easy to weed out the irresponsible from the responsible bidders on private work, so the Director of the average city department will find it easy to weed out the unequipped element bidding on public work. It is true that this discretionary authority might conceivably lead to the favoring of bidders able to exert political pressure.

But that is a condition whose remedy lies with the public rather than with regulations hampering official action. The problem is a difficult one at best, one that will tax the ingenuity of many minds to uncover the desired solution.

* * *

HOW many of the younger men, aspiring to distinction in architecture, take the trouble to read Ruskin? I am aware that Ruskin is not, infallibly, a safe guide for the architect to follow, and yet there are passages, here and there, in the pages of that grim old master of the written

PRINTS**

word that open up vistas of beauty, thought-compelling and inspiring beyond anything else within the reach of all literature. Take this little gem, for instance, from Ruskin's "Seven Lamps of Architecture":

"And among the first habits that a young architect should learn, is that of thinking in shadow, not looking at a design in its miserable liny skeleton; but conceiving it as it will be when the dawn lights it, and the dusk leaves it; when its stones will be hot, and its crannies cool; when the lizards will bask on the one, and the birds build in the other. Let him design with the sense of cold and heat upon him; let him cut out the shadows, as men dig wells in unwatered plains; and lead along the lights, as a founder does his hot metal; let him keep the full command of both, and see that he knows how they fall, and where they fade. His paper lines and proportions are of no value: all that he has to do must be done by spaces of light and darkness; and his business is to see that the one is broad and bold enough not to be swallowed up by twilight, and the other deep enough not to be dried like a shallow pool by a noon-day sun. . . ."

* * *

AN issue or two back I had occasion to say something in these pages about architectural design considered as mere detail in a composition to be sensed in the mass or as a whole; the premeditated grouping of pictorial qualities keyed to a natural harmony and producing upon the eye of the beholder much the same effect as a beautiful painting or a bit of superb scenery glimpsed through interlacing branches. Have we not here, in this little quotation from Ruskin the same general idea—the same appreciation of that nicely balanced relation which the design should bear to its setting and the group as a whole should bear to the various influences incident thereto—light and shade, vista and proportion, tonal verity and balance?

Ruskin is old-fashioned in the noisy, material world of the present but to the young architect eager to expand the artist soul in him to a sense of the beautiful in his calling I know of nothing in our cold, harsh, grudging English speech fit to hold a candle to him. Let the young practitioner read Ruskin. It may not make him a great architect,—that being a desideratum resting upon technical and other aptitudes peculiar to the individual,—but granted, a fair order of intelligence, moderate technical skill and the zeal of high inspirational ideals, Ruskin should lift the beginner to an appreciation of the beautiful that will, in any event, spare him the stigma of mediocrity.

NARBERTH and Merion are at odds. Merion has a new railroad station that is very much nicer architecturally than the station which Narberth has. And as a result pretty Narberth is "miffed." But let the *Bulletin* tell the story:

"A brisk rivalry in the fields of higher estheticism that now is agitating Merion and Narberth, the desire of each community to make itself a very jewel among suburbs, represents the more cheerful human reactions that persist in these rumbling times of war," says the *Bulletin*. "Merion improved itself so thoroughly that the Pennsylvania Railroad hurried along and saved its own face with a new railroad station of dashing architecture, with post office attachment. Narberth gazed in the mood of anxious inquiry. It, too, has been seeking the higher suburban life. It has built, polished, paved and cleansed. Narberth now demands a new railroad station of architectural aspect none the less dashing than that at Merion. Its spokesmen aren't averse to telling the world that when a fire broke out recently in the Merion Day School the communities of Narberth and Cynwyd sent their fire departments to assuage the blaze and thus exhibited a civic consciousness passing even that which displays itself in fine estates, barbered lawns and self-starting

birds nurtured and fattened in every tree and bush."

* * *

GENTLE wars like this are the sort of thing mostly likely to relieve the suburbanite of the charge of self-complacency that is hurled at him now and then by writers with long hair and soft collars who like to scribble about what they call a non-progressive 'villa class. The suburbanite, as a matter of fact, is a pioneer. He is the torch bearer for all those others in the general community who stick to the brick and stone canyons and prefer the stars of musical comedy to those of the sky. The suburbanite likes his peas out of the pod and not out of cans. He prefers the real to the Belasco sunset. He is a constant incentive to saner and better ordered existence and it is always cheering to observe that he doesn't lose his estheticism in the wilds.

"To improve nature is a difficult task, but it can be done. Good architecture is the chief means to this end. If Narberth gets its railroad station—with post-office attached—other communities will follow with demands and incentives for similar improvements. The general result will be added charm in those suburban regions that are already the most attractive in the East."

EDITORIAL NOTES

Convention Hall will be constructed on the Parkway for a sum within the limit of money available for the project. Plans for the hall are already under consideration and real work in regard to them will be started as soon as Mayor Smith returns from Florida. The building will be the finest architecturally and in every other detail that can be built for the money available, which is approximately \$1,418,000. The contemplated building will have a capacity of 6,000.

For renovating, remodeling and rat-proofing the municipal markethouse at Pine and South streets a contract for \$19,786 was awarded by Director Datesman to E. Clifford Durell.

* * *

Gross earnings of the Bell Telephone Company of Pennsylvania and associated companies for the year ended December 31 were \$22,709,183, as compared with \$21,492,643 for the previous year. Net amounted to \$5,976,774, to compare with \$5,811,633 in 1915. The company has a surplus of \$1,754,246 after paying dividends. During the year the number of owned stations increased 48,368 to 571,794. Additions to real estate, equipment and lines amounted to \$4,873,036.

* * *

A protest has been sent to the United States Senate through Senator Penrose,

by the Bourse, protesting against the enactment of the revenue bill, whereby a tax would be laid upon excess profits of corporations and partnerships. The Bourse declares the act is unfair.

* * *

The Pittsburgh Plate Glass Company reports gross earnings of \$31,580,255 for the year ended December 31, to compare with \$22,825,074 the previous year. Profits were \$6,886,188, compared with \$2,201,343 for 1915.

* * *

A municipal stadium, with a seating capacity of 20,000, was advocated by officials of the Meadowbrook Club, at a dinner in the Union League. Councils have passed a bill carrying an appropriation of \$1,500,000 for a convention hall, and Meadowbrook members are fostering a movement to have the structure large enough to accommodate big indoor athletic meets.

It was pointed out by Andrew C. McGowin, president of the club, that 17,000 persons attended the Meadowbrook Club meet in the old Convention Hall, Broad street and Allegheny avenue, which is now being demolished. He said this attendance was an argument in favor of a big stadium.

The facilities of other cities in being able to stage indoor meets were outlined by Samuel J. Dallas, the club's secretary. A stadium of 20,000 capacity was also advocated by Lawson Robertson, track coach at the University of Pennsylvania, and James E. (Ted) Meredith, the world's champion runner.

* * *

A compulsory State health insurance bill is to be introduced in the Legislature about March 15.

The bill, which is drawn to conform with the standard bill of the National Association for Labor Legislation, has virtually all the features of the German health insurance system.

Every employed person in the State receiving less than \$100 a month is required to be insured for health. The benefits are paid through local funds, or societies, organized and controlled jointly by employers and employees. The employer contributes two-fifths of the fund, the employee two-fifths and the State one-fifth.

A commission composed of three men, to be appointed by the Governor, will administer the system. This commission will have an advisory council of eleven medical men and a council of twenty-four men selected from the directorates of the local fund.

In each working district of 5,000 inhabitants or more the commission will organize local and trade funds which will

administer the distribution of benefits, make arrangements with hospitals, physicians and nurses, pay death benefits and maternity benefits.

* * *

Extensive improvement of Cobbs Creek Parkway and the vicinity, especially in the southern section, is foreshadowed by the contracts on which bids were opened by Director Datesman. The contracts are for two concrete bridges, each 125 feet long and 7 feet wide, near Mount Moriah Cemetery. The low bidder is the Cantrell Construction Company at \$47,500.

Bids were also opened for the construction of a steel and concrete bridge, 60x60 feet on the line of Fifth street over the Richmond branch of the Philadelphia and Reading Railway. Monahan and Loses are the low bidders, their price being \$20,776.

* * *

All but two of the important sites on the Parkway between Logan square and the entrance to the Park have been allotted or recommended for allotment by the art jury. The first definite idea of how that end of the Parkway will appear when the buildings are completed is furnished in the art jury's annual report.

Beginning at Logan square, on the north side, will be the Philadelphia Free Library, extending from Nineteenth to Twentieth streets. The art jury has also recommended that the property between Eighteenth and Nineteenth streets facing the square also be acquired for the erection of a building of the same general design as the library.

Between Twenty-first and Twenty-second streets will be the Municipal Auditorium, with a runway sixty feet wide between Twentieth and Twenty-first streets offered access to storage space under the auditorium.

A plot of ground fronting on the plaza between Spring Garden street and the Parkway has been designed as the site for the Pennsylvania Academy of the Fine Arts. On the opposite side of the Parkway a location has been set aside for the Pennsylvania Museum and School of Industrial Art. Between the site of the Academy and the Municipal Auditorium permission has been granted for the erection of an Episcopal Cathedral.

On the northeast side of the Parkway between Twentieth and Twenty-first streets a plot has been recommended by a State commission as a site for a building to house the State Boards and officials whose principal business is in this city. This completes the allotments on the northeast side of the Parkway.

On the other side the art jury has recommended the ground from Twenti-

eth street to Twenty-first street for the municipal court building. The Philadelphia Museum of Art will be located on the promontory on the edge of the Park. This leaves only two important sites, one from Twenty-first to Twenty-second street and the other from Twenty-second to Twenty-third streets, both on the southwest side of the Parkway.

The art jury has recommended that the city extend the Parkway to include the ground as far as Powelton avenue and the river, partly for the protection of the Parkway and partly to provide a proper approach to the proposed Schuylkill embankments.

The offices of the State Insurance Department in Philadelphia, Harrisburg and Pittsburgh are to serve as information bureaus from which anyone may obtain information and advice on any insurance problem by calling or writing, it has been announced by J. Denny O'Neil, State Insurance Commissioner. The Philadelphia office is in the Commercial Trust Building. The commissioner reported there are \$2,197,357,870.56 worth of life insurance and \$2,292,203,732.48 worth of fire insurance in force in the State, and that while the Department costs the State \$80,000 a year it brings in \$2,000,000 in revenue.

AMERICA'S OLDEST HOUSE AT GUILFORD.

Was Erected by Company Which First Settled the Connecticut Town About the Year 1639.

Guilford, one of the interesting historical spots of the Connecticut coast, is among the towns on the shore road to New London from New York or New Haven. In driving through, automobile parties frequently stop to inspect the Old Stone House of Guilford, believed to be the oldest house now standing in the United States. It was erected by the company that first settled the town about the year 1639. Henry Whitfield was the leader of the little colony, and was one of the principal planters and a minister of the Church of England, a Nonconformist.

The house was built for him of stone brought on hand-barrows from a ledge some considerable distance away, and the stone cement in the walls is at the present time harder than the stones. Whitfield returned to England in 1649, and the house was used as a kind of fort for some years. The first marriage which took place in the town of Guilford, or Menunkatue, the Indian equivalent, was solemnized in the stone house, and the wedding supper consisted of pork and beans.

Within the last few years the building, which is sixteen miles east of New Haven and thirty-six miles southeast of Hartford, has been taken over by the State, and is now in use as a State museum. The walls have been plastered, the floors repaired, and the grounds improved and laid out like a Colonial garden, and here may be found many relics of early New England days to interest and instruct, among them an ugly old pine armchair which was made in England and brought to this country in 1639. It belonged to Governor William Leete, whose son, John, was the first white child born in the town of Guilford.

There is also a chair which was owned by John Hart, the first graduate of Yale University. The garret is the most interesting of the three floors, for here are to be found a dozen spinning wheels, wool cards, sad-irons, a wolf trap, grain fans, a collection of army saddles, cradles, a pewter communion set, and baptismal bowl, an adze, a pottle, and a corn sheller. Until 1840 corn was shelled by the simple process of tying a long-handled frying-pan over a tub and drawing the ear of corn across the sharp edge. Later a cumbersome device was invented with several blades set in a wooden roller which rested in a trough.

The queerest of all the relics are three-cornered, rough, wooden hat boxes and the original town clock, which had only one hand. The boxes were fashioned to accommodate the cocked hats, which were originally round, but as their great circumference made them extremely difficult to handle, the style was changed to suit masculine convenience and the brims were caught up in the rear and at each side. The clock is a wooden structure which

was presented to the town in 1726 by Ebenezer Parmalee, who built it. Its one hand told the hour and every night, excepting Saturday, curfew rang from the clock tower at 9 precisely.

CIVIL SERVICE EXAMINATIONS.

On March 14th, there will be examinations for Draftsmen in the following Services: Copyist, topographic, Department Service; Junior architectural, Supervising Architect's Office; Topographic, Departmental Service; also Electrician, Departmental Service; Junior Engineer, civil, Engineer Department at large; Junior Engineer, civil, and draftsman, Departmental Service; Junior Engineer, mechanical or electrical, Engineer Department at large.

On April 11th, there will be examinations for Draftsmen in the following Services: Architectural, Supervising Architect's Office; Copyist, Navy Department; Mechanical, Panama Canal Service; Topographic, Panama Canal Service.

There is also to be held an examination for Mechanical Draftsman, Office of the Chief of Ordnance, War Department, Washington, D. C., at salaries ranging from \$1,000 to \$1,200 a year.

Further particulars regarding these examinations may be obtained by applying to the Civil Service Commission, Washington, D. C.

THE MIXER.

A curious thing is the Mixer Man,
More human than you may think,
With his yawning maw, his grinding crew,
And yearning for food and drink.
Gentle and kind is the Mixer Man,
And eats, as you doubtless know,
Cement and sand from his owner's hand,
With a chaser of H₂O.

A stomach strong has the Mixer Man,
And never a care has he,
You can always tell when you feed him well,
For he sings right merrily.
He munches and crunches his sand and stone
Until finely ground and blent,
And how he will grin as you tumble in
His favorite food, cement.

A mighty force is the Mixer Man,
The builder's trusty friend;
He never shirks, but works and works
'Till the toilers homeward wend;
And hour by hour his molten flood
Of concrete lava flows,
To shape and seal the knitted steel,
Where the building grows and grows.
—Frank Adams Mitchell, in "The National Builder."

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.
—Exchange.

COLOR IN DECORATION.

The Door as an Object for Polychrome Decoration.

Two noteworthy tendencies have been clearly visible in the architectural treatment of interiors within the recent past. The first is a disposition on the part of architects to avail themselves more fully of the manifold opportunities open to them of making interior woodwork again an important factor of decorative interest and embellishment, as it once was in former periods of our own architectural history and as it was during so many stages of architectural development both in England and in foreign countries.

The second tendency is closely related to the first. It is, in fact, an important integral part of it and marks a logical step of progress in the course just noted for reawakened perception and appreciation of decorative resources within the purview of architectural employment. It is with this second tendency, the tendency to call in the aid of polychrome enrichment, that our immediate concern lies. Some years ago when we began, reticently and experimentally at first, to turn to wood as an added source of decorative amenity, through the influence of a revival of the so-called Colonial style, we labored under the obsession that white paint was an indispensable accompaniment. A little later we realized that the builders of the eighteenth century and before had not restricted themselves in the choice of color for interior woodwork and then we ventured to try grays and gray greens with occasional excursions into more pronounced chromatic treatment. The reaction against the exclusive use of white was also furthered by the popularity of rooms paneled in a French or semi-French mode of Louis Seize characteristics and painted gray.—H. D. Eberlein in "Arts and Decoration."

COMING TRADE CONVENTIONS.

—The National Pipe and Supplies Association will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

—The National Fire Protection Association will hold its annual meeting in Washington, D. C., May 8-10, 1917.

—The National Brick Makers' Association will hold its next convention at the Hotel McAlpin, Broadway and Thirty-fourth street, New York City, from March 4-11, 1917.

—The National Complete Building Show will be held in the Grand Central Palace, New York City, March 5-11, 1917.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Loft Building, 239-43 South Fifth street, Philadelphia. Architect, C. E. Rahn, 410 Walnut street, Philadelphia. Owner, Maur Levan, 239 South Fifth street, Philadelphia. Reinforced concrete and brick, 10 stories, 112x75 feet, slag roof, steam heat, electric light, metal lath, fire doors, cement floors. Preliminary plans in progress.

Residence (alt. and add.), Prospect avenue and New street, Chestnut Hill. Architects, Bissell & Sinkler, 1218 Chestnut street, Philadelphia. Owner, Dr. Wm. H. Jefferys, 100 Walnut lane, Philadelphia. Brick and plaster, 2½ stories add, 2 stories, 40x35 feet, tin roof, plumbing, metal lath, tile work, pine and cement floors (hot air heat and electric work reserved). Revised plans in progress. Architects will take bids in a week.

Residences (18), Cobb's Creek Parkway, between Fifty-eighth and Fifty-ninth streets. Architect, private plans. Owners, Fox & Armstrong, 5957 Cobb's Creek Parkway. Brick, 2 stories, 16x61 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owners taking sub-bids.

Twin Residences (2 pairs), Fifty-fourth and Wynnefield avenue, Wynnefield. Architects, Neubauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, W. Percival Johnson, 4039 Lancaster avenue, Philadelphia. Brick, stone and plaster, 2½ stories, 22x40 feet, slate roof, hot water heating, electric lighting, hardwood floors, tile work. Owners ready for sub-bids.

Twin Residences (9 pairs), Fifty-fourth and Wynnefield avenue, Wynnefield, Pa. Architect, H. Taylor Smith, 6152 Nassau street, Philadelphia. Owner, W. Percival Johnson, 4039 Lancaster avenue, Philadelphia. Brick, stone and plaster, 2½ stories, 22x40 feet, slate roof, hot water heating, electric lighting, hardwood floors, tile work. Owners ready for sub-bids.

Garage, Twenty-sixth and Parrish streets, Philadelphia. Architect, private plans. Owners, Finnesey & Kobler, Twenty-sixth and Parrish streets, Philadelphia. Brick and concrete, 1 story, 121x100 feet, slag roof, cement floors. Owners taking bids.

,Boulery

Factory, Ruscomb street and Stenton avenue, Wayne Junction, Philadelphia. Architect private plans. Owners, Atwater Kent Manufacturing Works, 4937 Stenton avenue, Philadelphia. Brick (slow burning), 1 story and basement, 146x217 feet, asphalt roof, cement floors, metal lath, rolled steel sash, fire doors (elevator, plumbing, heating, electric work and sprinkler reserved). Owners taking bids, due in 10 days. Bailey-Lush Co., 201 North Broad street; Turner Concrete Steel Co., 1713 Sansom street; E. E. Hollenback, Inc., 1804 Brandywine street; Wm. R. Dougherty, 1610 Sansom street; F. W. Mark Const. Co., Finance Building; George & Borst, 277 South Eleventh street, and H. C. Rea Co., 1027 Wood street; Wm. Steel & Sons Co., 1600 Arch street; Wark-Yardley Co., 1737 Filbert street, are figuring.

Sunday School, Eighteenth and Tioga sts., Philadelphia. Architects, Stearns & Castor, Stephen Girard Building, Philadelphia. Owners, Tioga M. E. Church, care of Rev. George Gaul, on premises. Stone, 1 story. Plans in progress.

Stores and Apartments (alts.), northeast corner of Sixteenth and Columbia avenue.

Architect, Mantle Fielding, 518 Walnut street, Philadelphia. Owner, Max Roetenberg, 1419 Ridge avenue, Philadelphia. Brick, 2 and 3 stories (add.), 17x27 feet, tin, slate and tile roof, oak and pine floors (heating, electric work, decorating reserved. Revised plans in progress.

Manufacturing Building (add.), Front and Erie avenue, Philadelphia. Architects, Watson & Huckel, 1211 Walnut street, Philadelphia. Owners, Hess-Bright Manufacturing Co., on premises. Brick, steel, reinforced concrete and terre cotta, 1 and 2 stories, 96x218 feet, slag roof, pine, marbleoid composition, cement and maple floors, metal lath, rolled steel sash, metal lockers (steam heating, sprinklers, electric work reserved). Architects taking bids, due March 5th. Harrison C. Rea Co., 1027 Wood street; Stone, Webster Co., 5 Nassau street, New York City; H. E. Baton, Twelfth and Sansom streets; H. H. Wehmeyer, 1004 West Lehigh avenue; P. Haibach Cont. Co., Twenty-sixth and Thompson streets, and James Johnston, 1721 Ludlow street, are figuring.

Loft Building, northwest corner of Ninth and Poplar streets, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Strawbridge & Clothier, Eighth and Market streets, Philadelphia. Reinforced concrete, steel and brick, 8 stories, 101x234 feet, reinforced concrete and slag roof and reinforced concrete floors, metal lath, rolled steel sash, fire doors, ventilators, sprinklers, safety treads, tile and marble work, 5 elevators, rolling steel shutters, mezzanine floors, chimney 75 feet high, radial gray brick. Architects taking bids, due March 1st. In addition to those previously reported, Barclay White & Co., 1713 Sansom street, and Longacre Const. Co., Widener Building, are figuring. Heating and lighting reserved.

Artillery Case Shop and Instrument Department Building (adds.), Frankford Arsenal, Philadelphia. Architect, private plans. Owners, U. S. Government, George Montgomery, Col., Frankford Arsenal. Brick, concrete, steel, stone trim, 1 and 2 stories, 199x49 feet, and 4 stories, 63x29 feet, maple floors, hollow tile, 1 elevator, rolled steel sash, waterproofing, safety treads, metal window guards (heating and lighting reserved). Lowest bidders on artillery shop, Ketcham & McQuade, 1029 Brown street, \$65,000, and Thos. Reilly, 1618 Thompson street, \$70,886; on instrument department building, Ketcham & McQuade, 1029 Brown street, \$28,205, and Thos. Reilly, 1618 Thompson street, \$30,992.

Residences (8), Oak Lane, Philadelphia. Architect, Andrew C. Borzner, 721 Walnut street, Philadelphia. Owner, James Orr, 2754 Germantown avenue, Philadelphia. Brick, frame and stucco, 2 stories, 40x16 feet, flexible roof, hot water heating, electric lighting, hardwood floors. Owner is taking sub-bids.

Office Building, southeast corner of Fifty-seventh and Chestnut streets, Philadelphia. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Arch streets, Philadelphia. Brick, stone, concrete and steel, 4 stories, 170x61 feet, slag roof, hot water heating, electric lighting, metal lath and sash, waterproofing, fire doors, sprinklers, tile and marble work, tile floors, hollow tile, elevators, fixtures, terrazzo work. Architect taking

bids, due March 6th. F. L. Hoover & Sons, 1023 Cherry street, and H. E. Baton, Twelfth and Sansom streets; Irwin & Leighton, 126 North Twelfth street; F. A. Havens & Co., 845 North Nineteenth street, and H. H. Burrell, 206 South Quince street, are figuring.

Garage, Sixteenth and Ingersoll streets. Architect, Amos W. Barnes, Hermit and Righter streets, Roxborough. Owners, Brighton Garage, on premises. Brick, steel and reinforced concrete, 2 stories, 88x105 feet and 52x97 feet, slag roof, cement floors, metal lath, rolled steel sash (plumbing, heating, electric work and elevator reserved). Architect taking bids, due March 1st. In addition to those previously reported, Wark-Yardley Co., 1737 Filbert street, are figuring.

Sunday School (alt. and add.), Thirty-third and Wharton streets, \$500. Architects, Chas. W. Bolton & Sons, Witherspoon Building, Philadelphia. Owners, Hope Presbyterian Church, care of Rev. J. G. Bolton. Consists of platform and ante rooms, plastering, pine floors. Architects taking bids, due, February 28th. Thos. C. Trafford, 1613 Sansom street, is figuring (only bidder).

Office Building, Sixth, Chestnut, Seventh and Sansom streets, Philadelphia. Architect, Arnold W. Brunner, 101 Park avenue, New York City. Engineers, Frank C. Roberts & Co., Real Estate Trust Building, Philadelphia. Owners, Public Ledger Co., Cyrus H. K. Curtis, president, Sixth and Chestnut streets. Brick, stone, steel, fireproof, 10 stories, slag roof, steam heating, electric lighting. Preliminary plans in progress.

Apartment House (alt.), 1429 Poplar street, Philadelphia, \$3,000. Architect, Philip S. Tyre, 1509 Arch street, Philadelphia. Owner, Julius C. Martin, care of architect. Brick, 3 stories, plumbing, electric light, hardwood floors, skylight, tile and marble work. Architect taking bids, due March 2nd. Abel Botoms & Sons Co., Inc., 3611 Walnut street, and A. R. Raff Const. Co., 1635 Thompson street, are figuring.

Hospital Building, Tulip and Allegheny avenue, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Northeastern Hospital of Philadelphia, 2359 East Allegheny avenue. Brick and reinforced concrete, stone trim, 2 stories, 101x41 feet, and 1 story, 31x31 feet, slag roof, terrazzo, cement and pine floors, metal lath, rolled steel sash, hollow tile, metal skylights, fire doors and tin clad and kalamein doors, tile and marble work (heating, electric work and elevator reserved). Architects taking bids, due March 7th. The following are figuring: A. R. Raff Const. Co., 1635 Thompson street; Ketcham & McQuade, 1029 Brown street; Irwin & Leighton, 126 North Twelfth street; Barclay White & Co., 1713 Sansom street; P. Haibach Cont. Co., Twenty-sixth and Thompson streets; John N. Gill & Co., Otis Building; H. E. Baton, Twelfth and Sansom streets; Pomerooy Const. Co., 1609 Ransstead street, and Alex. Chambley, 243 South Tenth street, Philadelphia.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

MORE OR LESS PERSONAL.

B. J. Medoff, a widely known local architect, died on Thursday last. Mr. Medoff had offices at 524 Walnut street and was the designer of much important work.

John I. Bright, architect; James H. Wells, builder, and the John D. Emack Company, slate producers, are among recent removals to the new Otis Building, at Sixteenth and Sansom streets.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street, Wharf, Delaware River, Philadelphia.

SOME MORE ADVERTISING

"DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

NEW JERSEY

Store, 2029-33 Market street, \$1,350. Bartlett Garage Co. (O), Twenty-first and Market streets. F. G. Stewart (C), 1619 Sansom street. Repair fire damage.

Store and Dwelling, 1603 Walnut street, \$1,280. H. Kay Messick (O), Loder Building. H. L. Roberts (C), 228 North Sixteenth st. Low pressure steam heating system.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 19, 1917.—Sealed proposals will be opened in this office at 3 P. M., March 30, 1917, for the construction of the United States post office at Reading, Mass. Drawings and specifications may be obtained from the custodian of the site at Reading, Mass., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LUMBER YARDS

Third and Girard Avenue, Philadelphia

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

Per Gallon, \$3.00

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 10

PHILADELPHIA
March 7, 1917

As The Editor Sees It

IN "The Madonna of the Future," one of the most exquisite of his shorter stories, the late Henry James depicts the mad American painter, Theobald, as saying:

"We are the disinherited of Art! We are condemned to be superficial. We are excluded from the magic circle. The soil of American perception is a poor, little, barren, artificial deposit. Yes! we are wedded to imperfection. An American, to excel, has just ten times as much to learn as a European. We lack the deeper sense. We have neither taste, nor tact, nor force. How should we have them? Our crude and garish climate, our silent past, our deafening present; the constant pressure about us of unlovely circumstance, are as void of all that nourishes and prompts and inspires the artist as my sad heart is full of bitterness in saying so! We poor aspirants must live in perpetual exile."

* * *

THIS little chapter, from a tale I read years ago, was recalled to me this week when in going over the February number of the *Journal of the American Institute* my eyes met, for the first time, extracts, there published, from some of the speeches marking the debate in Congress on the Omnibus Public Buildings Bill.

For the benefit of those who may not know it is perhaps wise here to explain that the Omnibus Public Buildings Bill is the measure under the terms of which the backwoods congressman is enabled to secure a \$200,000 post-office for a \$5,000 cross-roads village.

It is what is known as a "pork" bill. It affords the opportunity, to a certain type of congressman, to go back home, following a session in which he has been delightfully inconspicuous, with an ap-

propriation for a new federal building, and the air of a conquering hero.

* * *

NO special influence is necessary to set the bucolic representative on the trail for an appropriation of this class. The process is as old as Egypt. Its formula is "I'll tickle you and you tickle me." Granted, a sufficient number of congressmen seeking new federal buildings and a bill with items enough to enlist the support of these and the rest is easy.

You stand up for the bill to pull my item through and I stand for it to pull yours through. What's a congressman for if not to get everything that he can for the embellishment of his district? To be sure \$200,000 seems like a whole lot of money to expend upon a post-office in a town scarcely big enough to warrant regular train service—but what of that? Let us get what there is to be gotten while the getting's good. Sermons and soda-water the day after tomorrow.

* * *

MR. MORGAN, representing an Oklahoma district, led the attack, which has now become a regular feature of the pork bill, on the American Institute of Architects. Mr. Morgan objected to a salary of \$7,500 for the supervising architect. He considered \$6,000 ample. Whereupon Mr. Clarke, of Florida, romped into the fray.

"The architects of this country make a great deal more money than that," said Mr. Clarke, of Florida; "you can not get a man who is a first-class man to take that place for \$5,000 or \$6,000. I question whether you would be able to get him for \$7,500. . . . The Committee discussed fixing it at \$10,000. For my-

self I would be perfectly willing to pay \$20,000 a year to a good man who would go into that office and do the work that ought to be done. He can save his salary a dozen times over in the course of a year, because if we get the right man—and we have attempted here to get not only a good architect but a good business man—if we can get that kind of a combination the Government could well afford to pay him \$50,000 a year and save those enormous fees that are paid to outside architects who work upon these great buildings."

* * *

AT another time Mr. Clark said: ". . . . the fight against these small buildings is not the main fight against the bill . . . the fight that has been inaugurated against the bill is not because of a few little buildings in small towns here and there. The American Institute of Architects is the Architectural Trust of the United States. They have been getting the "pork" for all these years. [Applause.] They hung around the committee room for days and weeks, and they wanted to write the legislation in this bill. The Supervising Architect's office has not for years constructed one of these large buildings in the great cities or in the city of Washington. It has always been farmed out to the American Institute of Architects or their members, and they get 6 per cent. on the gross cost of the building. On a \$3,000,000 building they would pull down \$180,000 for drawing the plans and specifications, and I am here to say I believe, and the committee believes, that the United States Government ought to have men competent to do that work in their own public-building office without going outside to hire these people to do it."

**BLUE
PRINTS**

COMMENTING upon these quite characteristic samples of congressional opinion, the *Journal* of the Institute remarks:

"Every architect in the United States is familiar with this sort of injustice, but every citizen may well pause and consider that to-day, in a nation purporting to be great, free, civilized, wealthy, progressive, the architectural destinies of the buildings of the Government rest in such hands! It is humiliating to the point of disgust! And the record of those three days of wasted debate is filled with such allusions, such ignorances, such prejudices, such misrepresentations.

Less than three years ago the same Mr. Clark signed his name to the report of the Public-Buildings Commission, containing the following:

"It is found that the cost of preparing plans and placing work under contract in the Supervising Architect's office is approximately 4 per cent. Three per cent. additional is required to supervise and complete the work."

Competent authorities believe that this total of 7 per cent.—compared with the customary 6 per cent. paid to reputable architects in private practice—would amount to more than 8 per cent. if all items of expense were properly included in making the figures. Fortunately there are members of Congress who understand the real situation and a ray of hope illumines the fight to bring it to an end."

* * *

THERE is something depressing in the thought that in the Congress of the United States men should sit, credentialled from States boasting a fair average of general intelligence, who have so faint a conception of the educative possibilities of a good as opposed to a bad or a merely mediocre national architecture. It is still more depressing to reflect that men, set up as representative of whole communities of our national life, should be so lacking in vision and in perspective as to look with suspicion on the recommendations of a technical body that is broadly representative of all that is highest and best in American architecture.

* * *

TO refer to the Institute as "a trust" is an indictment of American architecture. In no other nation in the world could it be regarded as sane public policy to have buildings of the type of our federal structures confined to the capabilities of one official, however eminent.

If by awarding the commissions, under competition, for designs of the kind to architects in private practice the coun-

try is enabled to secure a higher and more distinguished order of design what earthly objection can be urged, barring the unjustifiable suspicions of men of a low order of intelligence, to adhering to that plan of procedure?

* * *

THE GUIDE is moved to an expression of regret at finding, listed among those who voted in the affirmative on the bill in question, two of Philadelphia's representatives in Congress. We have the utmost confidence that Messrs. Moore and Vare are without sympathy for the narrow, provincial attitude of the members quoted in opposition to the architectural profession. Both of the gentlemen named are liberal patrons of the art and distinctly sympathetic to agencies laboring for the higher ideals in our national development. We beg to suggest to the Institute the wisdom of placing the facts, in this controversy over the question of federal building design, before Messrs. Moore and Vare, and their colleagues from this city, with a view to enlisting their interest.

* * *

AN article on "Regulating the Practice of Architecture as a Profession," from the pen of Mr. Peter B. Wight, presents certain interesting suggestions along the line of State regulation. Says Mr. Wight:

"I have been requested by so many Chapters of the Institute and members of State Boards for Regulating the Practice of Architecture as a Profession, for assistance in formulating new laws or amending existing ones, since the publication of my articles in the *Journal* for October, November and December, that I deem it important to be more explicit in recommendations how to provide for what has for several years impressed me as the most important provision to be embodied in such enactments—that is, for not only eliminating from the profession, but for punishing those who may be found to be guilty of *dishonest practices* in the pursuit of their profession. In my last article I quoted from an address delivered two years ago in which I gave reasons for the necessity for so doing. I quoted from the code of professional practice of the Institute and of the Illinois Society of Architects. Many of the Chapters have adopted and published such codes. Nearly all of the State laws give power to boards of examiners to revoke licenses for "dishonest practices"—without defining what they may consist of—and the Appellate Court of Illinois, without ruling against such penalties being inflicted, has held that the words are plural and that the penalty can not be inflicted for *one* dishonest

practice. That makes it necessary to amend such acts by definitions declaring that one dishonest practice is sufficient for revocation."

* * *

IT is also important that as many as possible of dishonest practices known to be prevalent should be defined in the laws. To that end, I propose that an additional section be added as an amendment to all of such laws. No existing section should be amended, for by so doing court decisions sustaining the constitutionality of such laws might become thereby nugatory. I have therefore drawn up the following explanatory section, to which should be given such a heading as is customary to add amendatory acts in the several States, and which should always be submitted to some competent lawyer before presentation to any State Legislature or General Assembly."

* * *

THE following is suggested as a sample:

A BILL for an Act to amend an act to provide for Licensing (or Registering) Architects and Regulating the Practice of Architecture as a profession as adopted and in force ——— and amended by adding a section to be known as Section ———, as follows:

Wherever the words 'dishonest practice' or 'dishonest practices' occur in this act the same is hereby defined to refer to one or more of such practices; and the following are hereby defined as among dishonest practices, for which the license of an architect may be revoked upon trial or investigation by the State Board, and are hereby declared to be unlawful, for the commission of which the holder of such license (or certificate of registration) may be punished by fine or imprisonment or both after due trial in any court of competent jurisdiction, which fine shall be not less than two hundred (200) dollars, nor more than five hundred (500) dollars, or imprisonment, upon failure to pay the fine, of not less than two nor more than six months, in the discretion of the Court.

1. To be guilty of fraud or misrepresentation in obtaining a license (or certificate of registration).

2. To accept any commission or substantial service or favor from any contractor or anyone connected with the building trades, or from anyone furnishing materials in a building designed or supervised by the architect of the building in which the same are used.

3. To injure intentionally the fair reputation, prospects or business of another architect.

4. To attempt to supplant a fellow ar-

chitect after definite steps have been taken toward his employment.

5. To conspire or attempt to conspire with any other person to violate the building or sanitary laws of any village, city, town, county or state, in which building is regulated by law.

* * *

The Legislative Committee of the Architects of Indiana has formulated and had introduced in the General Assembly of that State a bill for the "Licensing of Architects and Regulating the Practice of Architecture," modeled after the Illinois law. It has added a section, the wording of which is almost exactly copied from that recommended by Mr. Wight as above and suggested in his article in December. This section defines "Dishonest Practices" as referring to one or more of such practices and specifically describes three of them as follows:

(1) "To be guilty of fraud or mis-

representation in obtaining a license to practice architecture."

(2) Exactly as recommended in the "Journal" and marked (2)

and (3) Exactly as given and numbered (5) in the "Journal."

The Committee of Architects in charge of the bill says: "It was thought by our legal counsel that the suggestion that it would be considered a misdemeanor for an architect to injure the reputation of another should be taken care of in an individual suit for damage rather than in the statute; also that a clause referring to an architect supplanting another who had taken steps for procuring a commission or executing it, is one which involves the ethics of the profession and could not be a specific, forceful claim in the statute."

The whole question of adding a new section of similar import to the Illinois law will be considered at a regular meeting of the Illinois Society of Architects to be held very soon, at which legal counsel will be consulted.

EDITORIAL NOTES

Consolidation of the McGraw Publishing Company with the Hill Publishing Company, of New York, to form the McGraw-Hill Publishing Company, controlling between them 11 engineering journals, is announced. These publications are the *Electrical World*, *Electrical Merchandising*, *Electrical Railway Journal*, *Engineering Record*, *The Contractor*, *Metallurgical and Chemical Engineering*, *American Machinist*, *Power*, *Engineering News*, *Engineering and Mining Journal* and *Coal Age*.

The *Engineering News* and the *Engineering Record* are to be merged as the *Engineering News-Record*. James H. McGraw will be president of the new company, Arthur J. Baldwin vice-president and treasurer, and E. J. Mehren vice-president and general manager.

* * *

Edward T. Stotesbury, noted financier, has just paid \$85,000 for a strip of land for a winter home at Palm Beach, near another piece of land which many years ago sold for three dozen eggs.

Mr. Stotesbury's price of \$500 a running foot sets a new high mark for Palm Beach real estate. Mr. Stotesbury has been a visitor at Palm Beach every winter since he spent his honeymoon there five years ago. The ground has a frontage of 176 feet on Lake Worth.

The purchase was made from Mayor E. M. Dimick, whose family in 1875 bought a mile frontage of property here

running a half-mile deep from lake to ocean, for \$89. This was a few years after Charles Moore, who died here seven years ago, had purchased the site of the Royal Poinciana Hotel for three dozen eggs, afterwards selling the land for \$4,000. Richard Croker recently refused \$45,000 for less than an acre which he bought four years ago from John R. and Edward Bradley, on the ocean front.

* * *

Assistant City Solicitor Coyne went before Judge Shoemaker and reopened the rule for a preliminary injunction against Harrison Bros. & Co., Inc., to restrain the operation of the concern's plant at Gray's Ferry road near Thirty-fifth street, in such a manner as to cause a nuisance to the neighborhood. Odors and fumes from the plant, it is complained, again permeate the atmosphere. Recently, when the company was haled into court, representatives agreed to make changes in the operation of the plant and close down portions of it, so as to abate the nuisance complained of. "But on Monday," said Mr. Coyne, "the plant was going at full blast and the sulphuric fumes were as bad as ever."

Judge Shoemaker fixed March 9 as the return day for the rule.

* * *

Officials of the Reading Railway Company announced the award of contracts

for replacing the bridge carrying the Port Richmond Branch tracks over Ridge avenue at Laurel Hill. The Seaboard Construction Company will do the grading and masonry. L. F. Shoemaker & Co. the structural steel work, and James Kelly the waterproofing. The plans call for a new three-track through-plate girder structure, with concrete floor.

* * *

Calbert Townley, assistant to the president of the Westinghouse Electric Company, attended a hearing of the jury of view to determine damages for a change of Island road to accommodate the proposed big plant near Essington. The hearing was held in the City Hall.

It was generally supposed the new plant would employ from 5,000 to 6,000 men; but Mr. Townley informed the jury that the company's plant on the Delaware River front when completed will cover 500 acres of land, and will give employment to between 20,000 and 25,000 men, provided the road is changed as desired.

The fact that Essington, Edystone and Chester will be unable to accommodate this large number of additional workmen, means that fully one-half of them will seek homes in Philadelphia and become a part of its rapidly-increasing population.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

FIRE WASTE AND CITY PLANNING

The National Fire Protection Association when assembled in Chicago for its twentieth annual meeting, called attention to the disastrous fires of the past few months which destroyed whole sections of cities in the South and elsewhere and which further emphasize the need for better building construction and the avoidance of wooden shingle roofs and other combustible materials in the exterior of buildings.

The association heartily commends the growing movement for city planning as likely to produce better conditions as to building heights and congested areas, and provide the open spaces and broad avenues, which, beside their human and esthetic values, are excellent checks to sweeping fires.

In its warfare against the needless sacrifice of human lives and property by fire the association advocates the following measures:

1. The adoption by municipalities of the Standard Building Code of the National Board of Fire Underwriters to the end that fire resistive building construction may be encouraged, the use of inflammable roof coverings prohibited, adequate exit facilities from buildings assured, and interiors so designed and fire-stopped as to make easy the extinguishment of fires therein.

2. The adoption by all States of minimum building requirements for the protection of State and County hospitals, asylums and similar institutions outside city limits and of small communities in which the establishment and enforcement of a building code is impracticable.

3. The enactment by each State of the fire marshal law advocated by the Fire Marshals' Association of North America to the end that official investigation may be made of the causes of all fires, preventable fires may be eliminated by public education, and the crime of arson stamped out.

4. The adoption of the association's suggested ordinances providing for the systematic inspection of all buildings by city fire marshals or local firemen to insure the vigorous enforcement of rules for cleanliness, good housekeeping, and the maintenance of safe and unobstructed exits, fire-fighting apparatus and other protective devices.

5. The enactment of ordinances similar to that of Cleveland, Ohio, fixing the cost of extinguishing preventable fires upon citizens disregarding fire prevention orders, and a more general legal recognition of the common law principle of personal liability for damage resulting from fires due to carelessness or neglect.

6. The wider general use of the automatic sprinkler as a fire extinguishing agent and life saver and the more general adoption of the fire division wall as an important life saving exit facility.

7. A careful study of the technical surveys of cities made by the engineers of the Committee on Fire Prevention of the National

Board of Fire Underwriters covering the items of water supplies, their adequacy and reliability, fire department efficiency, fire alarm systems and conflagration hazards; and of the possibility of co-operation among neighboring cities through mutual aid and the standardization of hose couplings.

8. The adoption of the association's suggested laws and ordinances for State and municipal regulation of the transportation, storage and use of inflammable liquids and explosives.

9. The universal adoption and use of the safety match and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings except in such fire-proof rooms as may be especially approved for the purpose by fire departments.

10. The education of children and the public generally in careful habits regarding the use of fire.

In the furtherance of these objects we appeal for the co-operation of all citizens. We ask them to help in the dissemination of our valuable literature and in the use of the standards of fire protection so carefully worked out by our committees to the end that the lives and substance of our people shall not continue to be dissipated by a reckless and easily preventable waste.

INTERCHANGING EMPLOYEES.

System Inaugurated Which Permits the Better Running of Apartments.

Efficiency in building management is becoming more pronounced all the time, and continually new refinements are being put into effect. One of the leading real estate firms, which makes management of apartment houses a specialty, conceived the idea that, should employees of the building be interchangeable, the owner would be benefited, cheaper cost of operation would result and the tenants would receive better service. All these conditions would produce more rentable buildings and do much to relieve families from shifting from one house to another.

The concern employs as superintendents men who are well versed in a given trade. In one house a steamfitter is employed; in another, a man who understands elevators; in a third, a practical plumber, and so on throughout the list. These employees have standard salaries, which in itself simplifies the running of the various buildings.

Should elevator trouble develop in house A, and the elevator expert be located in house B, he is immediately shifted to house A, until the trouble has been overcome. In the same way if the hot water plant in house C needs attention, and the superintendent in charge is not qualified to make the necessary repairs, a man suitable to correct the trouble is placed in the building until the trouble is straightened out.

There is another advantage in the system,

because in addition to co-operation of this branch of the force the men, as individuals, learn the various peculiarities of the various buildings and automatically increase their knowledge and thereby become more valuable to the concern.

In houses of the better class, where high rentals are paid, it is of the utmost importance that repairs be made promptly and efficiently. Should an elevator become disabled, the utility elevator would have to be brought into service for the tenants. As a rule, this elevator is well finished, but is known throughout the house as the service elevator, and the tenants dislike using it themselves or having their friends compelled to ride on it. Therefore the sooner the repairs are made, the less dissatisfaction will result.

As a superintendent of a large building in the Park avenue section said recently: "Buildings are like human beings, in a sense—each one has its peculiarities. Take two houses that I know of, which are erected from the same plans, having similar elevators, steam and hot water plants, etc.: These houses are entirely different and must be run by people who understand the little troubles. In one house, for instance, the coal bill was almost twenty-five per cent. more than in the other; and there was a great deal of trouble with the owners, as they controlled both properties. There did not seem to be any good or reasonable explanation as to why the variance should exist, until it was realized that the elevation of the surrounding buildings varied in the two cases. A different grate was put in; another mixture of coal tried, and the results became satisfactory. This is only one case, but it serves to illustrate the point."—"New York Real Estate Record."

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scrimper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

The man "who doesn't believe in advertising" can't understand why the other fellow gets the business.

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

Barrett Specification Roofs

In Grand Rapids, for instance—

In almost any American city—you can pick out any of the leading commercial buildings and say with fair certainty, "*That building has a Barrett Specification Roof.*"

Take the city of Grand Rapids, for instance. Here are the four newest buildings: the new Bank, a new wholesale Grocery, the new Y. M. C. A., and the new Hotel.

They all have Barrett Specification Roofs.

Most permanent buildings in the country carry this type of roof, and their popularity is not to be wondered at when you consider the following features:

First: Lowest unit cost per year of service.

Second: Guaranteed for twenty years, with a record which shows that they last much longer.

Third: Freedom from maintenance expense.

Fourth: Approved as "Class A" construction and take the base rate of fire insurance.

Tile, Slate, Shingles and Ready Roofings—all have their place on different types of steep-roofed buildings; tin is now rarely used for roofing. For all important commercial structures, however, the standard practise calls for Barrett Specification Roofs.

Guaranteed for 20 Years

We are now prepared to give a 20-Year Surety Bond Guaranty on every Barrett Specification Roof of fifty squares and over in all towns in the United States and Canada of 25,000 population and more, and in smaller places where our Inspection Service is available.

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us *without charge*. Our only requirements are that the roofing contractor shall be approved by us, and that The Barrett Specification, dated May 1, 1916, shall be strictly followed.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

The finest automobile will not run when the tank is empty, and the finest space can not pull unless it is filled with copy that grips interest.—"Printer's Ink."

Advertiser! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Office, Washington, D. C., March 1, 1917.—Sealed proposals will be opened in this office at 3 p. m., April 26, 1917, for the construction of the United States post office at Fremont, Ohio. Drawings and specifications may be obtained from the custodian of the site at Fremont, Ohio, or at this office, in the discretion of the Supervising Architect. Drawings and specifications will be ready for delivery after March 15, 1917. Jas. A. Wetmore, Acting Supervising Architect.

LITHOFORM

A Positive Primer

FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

WIRE TALKS

☞ *Mr. Architect, Builder or Owner:*

You can buy Wire Products in a dozen places; you can have special designs in Wire fabricated to your order at a dozen points on the map. ***But you can't buy AUDUBON SERVICE anywhere but at Audubon.*** Let us try to tell you in this little series of Wire Talks just what we mean when we make use of the term "***Audubon Service.***"

☞ ***AUDUBON SERVICE***, first of all, means our personal attention down to the smallest detail. An attention starting in with our receipt of your order; following it through our shops; seeing to it that the quality of material used squares absolutely with your specifications; that the sizes, weights, and designs, are in exact accordance with your wishes; that the work is completed and made ready for shipment within the time-limit set in your contract and that there is ***no delay, disappointment or vexation about delivery to you—"on the dot."***

☞ This is what we have in mind when we talk of "***Audubon Service:***"—

GOODS RIGHT
DESIGNS RIGHT

SIZES RIGHT
WEIGHTS RIGHT

and—

DELIVERIES RIGHT!

☞ Let us give you a practical demonstration. The acid test is a trial order.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 11

PHILADELPHIA
March 14, 1917

As The Editor Sees It

THE BUILDERS' GUIDE added 425 new subscribers to its paid circulation in six days recently. It expects to add as many more to its list during the next six days. These new subscribers are the result of a systematic campaign in which THE GUIDE is being represented by a corps of the cleverest subscription specialists in the country.

The new subscribers are from nearly every known branch of the building trades. They include builders, carpenters, sub-contractors, bricklayers, plasterers, plumbers, heater and range men, roofers, cement contractors, waterproofers, contracting painters, electricians and decorators. They cover a range of territory extending from Philadelphia to Harrisburg. THE GUIDE subscription boosters are this week campaigning in South Jersey. When their work is there concluded they will operate from Harrisburg, West, taking in Pittsburgh and Allegheny. It is the intention of the management to press this campaign until the actual paid circulation of THE GUIDE may be said to cover every branch of the building trades from the architect down to the jobbing carpenter.

* * *

JUST at this time when THE GUIDE is expending considerable sums of money on new circulation is a most propitious time to advertise. An advertisement in THE GUIDE's pages is assured not only of reaching every architect and builder of importance in Pennsylvania, Southern New Jersey, Delaware and Maryland, but has the extra assurance of coming to the favorable attention of anywhere from three to five hundred smaller carpenters, jobbers and building workers, weekly, who have not heretofore been among its regular readers.

The signed subscription blanks covering these new enlistments in THE GUIDE's army of readers can be examined at the office by doubting Thomases and folks who profess to be "from Missouri." THE GUIDE has never stooped to cheap or "faking" methods in its zeal for new business. This subscription campaign, like everything else THE GUIDE has undertaken in its thirty years of honorable existence, is a campaign resting strictly on the merits of the proposition.

* * *

THE new readers are being obtained without bait or premiums other than a promise,—which will be redeemed,—that the scope of the policy will be enlarged to include matter of special interest to every branch of the building trades.

* * *

THAT Philadelphia has started a banner year for the building trade needs no better proof than the report of the statistician of the Bureau of Building Inspection. January showed a business of \$2,144,630, which was the largest January with one exception in the last ten years. And now comes February with the total cost of buildings for which permits have been issued amounting to \$4,042,115. This not only exceeds the total of the corresponding month of last year by \$1,604,365, but is the largest February in the last ten years and probably the best in the history of the Bureau of Building Inspection. Remembering that last year was the largest in the total cost of buildings for which permits were issued, it does not require an optimist to be enthusiastic over the start of the present year. The building business in Philadelphia has surely taken a momentum that will be hard to stop.

THE New York Sun has inaugurated the second of its series of competitions for a country house to cost less than \$6,000. Four prizes are offered, a first prize of \$250, a second prize of \$150, a third prize of \$25. The contest is open to students of all architectural schools, and to students of the Society of Beaux Arts Architects. The design must be for a two-story and cellar all-the-year house. No designs will be accepted from practicing architects. Details of the competition may be had by addressing "Architectural Competition *The New York Sun*, Sun Building, New York City." The judges who will pass upon designs submitted are Charles A. Platt, Alexander B. Trowbridge and Richard Harvey Dana, Jr.

THE Twenty-third Architectural Exhibition of the Philadelphia Chapter of the American Institute of Architects and the T-Square Club is now open to the public in the galleries of the Art Club, Broad and Chancellor streets, and will remain open until March 25th. A review of the exhibition will be the feature of a forthcoming number of THE GUIDE. Tickets for the exhibition may be had at the office of THE GUIDE on request.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.

A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.

It helps your biz',
And therefore is
A goodly thing to try.

EDITORIAL NOTES

Speculative and investment building interests seem to be the chief sufferers from the existing high prices of building materials and supplies, remarks *The New York Real Estate Record*. At the present writing there is no prospect of relief in sight; no price recession seems possible, for the tendency now is all toward further advances in substantially all lines of building commodities. Considering the limitations in supply and the heavy demand for practically all materials, present prices will be thought almost nominal when compared with those likely to maintain by the time that the building season becomes really active, provided the present ratio of increase is continued. Speculative and investment builders naturally feel the increased prices more seriously than do the owners who construct buildings to extend their manufacturing or business facilities or the individual who builds for the gratification of his personal desires and tastes. There is a limit at which the former is able to dispose of or rent his improved property, and with the high construction costs his margin of profit is decreased and in numberless instances they have made improvements to property impractical if not absolutely prohibitive.

A. Pearson Hoover, formerly construction engineer, John W. Ferguson Company, Paterson, N. J., and construction engineer for C. T. Main of Boston, Mass., is now an associate of E. P. Goodrich, consulting engineer, of 35 Nassau street, New York City.

* * *

Among the reasons advanced for the high cost of building materials and supplies in all parts of this country is that ascribed to the options that are being taken on commodities of every description, and in gigantic quantities, by concerns making plans to ship knocked-down buildings by the million dollars' worth into Europe, just as soon as the present war is ended. The reason seems logical, as it is a well-known fact that the requirements of European countries for materials and buildings for the reconstruction will be greatly in excess of the available supply for some years to come.

John C. Jay, Jr., formerly vice-president of the Pennsylvania Steel Co., and chairman of the Board of the Maxwell Motor Co., has joined the firm of Jamieson, Houston & Graham, consulting en-

gineers, 40 Wall street, New York City. The firm will hereafter be known as Jamieson, Houston, Graham & Jay.

* * *

Although the prices of structural steel shapes have advanced somewhat during the last week, the number of orders booked during the period were smaller and the inquiries less numerous. The recent lull in the building trades is responsible for this condition, as there have been but few structures contracted for requiring steel in sufficient quantity to affect the market. The bulk of recent construction has consisted of small structures, and alterations calling for little if any structural steel. Suburban work has kept the building trade alive during the past few weeks. The outlook is excellent, however, as there are many important projects contemplated in this city and in neighboring towns that will require large amounts of steel shapes, and it is confidently expected that these operations will be placed on the market in the near future. The general condition of affairs has been so unsettled of late that prospective builders have hesitated to commit themselves for fear that further complications will upset their calculations and cause serious losses instead of the profits counted on.

* * *

National Pipe and Supplies Association will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

* * *

The high cost of materials does not seem to deter the construction of buildings. Not only are the architects busy on industrial buildings, but there seems to be an unusual number of larger apartment houses under way and not a few residences being planned for early spring building, with the announcement of an occasional picture theatre. All this goes to show that the variety is large and that prosperity in the building field has reached all trades.

* * *

American Iron, Steel and Heavy Hardware Association will hold its convention at the Hotel Grunewald, New Orleans, La., March 27-29. Arthur H. Chamberlain, Marbridge Building, New York City, is the secretary.

* * *

A \$6,000,000 program of improvements to public thoroughfares, to be completed by the end of this year, is planned by the Bureau of Highways. This includes paving and repaving of streets

with granite block and asphalt and development of the Northeast Boulevard and the Parkway.

The first part of the program, \$1,400,000 worth of work, of which \$490,000 is to be done on the Parkway, will be under way the middle of next month. Bids will be received next week.

* * *

American Hardware Manufacturers' Association and the Southern Hardware Jobbers' Association will hold their convention at the Rice Hotel, Houston, Texas, April 17-20. F. D. Mitchell, 233 Broadway, New York, is secretary-treasurer.

* * *

Associated Manufacturers of Electric Supplies will hold its annual meeting at Delmonicos, New York, on March 15. On March 13, a number of sections of the Association will meet at the Hotel Biltmore.

* * *

National Machine Tool Builders' Association will hold its spring meeting at the Hotel Sinton, Cincinnati, Ohio, May 21-22.

* * *

New Jersey State Association of Master Plumbers will hold its annual convention at Elks Hall, Jersey City, N. J., May 15-17.

* * *

Charles J. O'Neill, a retired builder, died at his home, 1216 South Brood street, Philadelphia, after a short illness from pneumonia. He built many of the city's public schools and firehouses. A widow, four sons and two daughters survive him.

* * *

The architectural firm of Lachman & Murphy, identified with some of the most important of local building projects, has removed its offices from the Witherpoon Building to 356-57-58 Drexel Building.

PAINTING DON'TS.

- Don't paint wet wood.
- Don't second coat until the first has dried hard.
- Don't use thick paint.
- Don't try to do too much at once; finish as you go.
- Don't try to mix paint unless you know how.
- Don't use paint you don't know anything about.
- Don't varnish where the dust is flying.
- Don't use the brush for everything; brushes are cheap.
- Don't forget to clean your brushes and leave them in water over night.
- Don't putty until the surface has been first coated.—"Paint Pointers."

THE METAMORPHOSIS OF THE ATTIC

The attic of delightful childhood memory still may be found in old-fashioned homes where father uses a "moustache cup" and a plush-covered photograph album with a heart-shaped mirror and brassy clasps occupies a prominent place on the "centre" table, says a writer in "The Hoggson Magazine." But, for the most part, the attic, as we recall it, is a thing of the past, a thing of hallowed memory and romance.

Of course, there has been a more or less appreciable movement by certain modern-day pseudo poets to popularize attics by inhabiting them, and calling them Somebody-or-Other's "Garret," but this is purely an effort to create an interest in bad verse. No, attics will never be in again.

But we digress. The old-fashioned attic! Well might it have been called the heaven to which all good and much loved things went when they "died." And this happy hunting ground of the worn-out provided the early idea of Paradise to the children of the house. It was a veritable treasure trove and its wonders were never exhausted. The lost, the strayed, the forgotten, the cast-off, all found their way there. Truly to dust they returned.

Broken dishes piled up on the table that had suffered the loss of a leg and leaned its sagging weight on a box of sea shells and corals, the gift of a seafaring uncle; Jimmy's hobby-horse, which had fallen in the battle of boyhood against babyhood, stood forlorn and alone. Sabres took on a coating of rust, as did the brace of heavy army pistols hanging from rusty nails. Trunks and toys, furniture and old clothes, books and—! But why enumerate? This is not an inventory.

A visit to the attic was an adventure calculated to entrance with delight, and thrill with fear the daring explorer. From the vantage point of the top step the musty smell and the stillness of the atmosphere portended deep and unfathomable mystery—anything seemed possible in such a place.

In the dim light, rows of headless figures hung along the wall; it was Bluebeard's forbidden room. In a dark corner, a wicked animal crouched; two bright spots gleamed out viciously, and when a surprised and frightened mouse scurried across the floor, well, who wouldn't close the door and run?

But there was no resisting the subtle lure of the unknown. Summoning new courage, and a playmate as reinforcements, another attack was made and boldly pushed to a successful completion. But how disappointing for the moment, when more intimate investigation disclosed the headless figures as old military uniforms and army capes! And the eyes of the wild beast proved to be only a glint of sun on the shining knobs of a paid of old brass andirons!

The attic then accommodately became a safe retreat, and afforded its many volumes

of yellow-leaved books the desired thrills for excitement in the stories of others' adventures.

Splendid though were the attic's possibilities as a theatre. Cords stretched from rafter to rafter, a couple of old sheets, and there was a curtain. Now the old hair-covered, nail-studded trunks were truly treasure chests filled with the most gorgeous costumes any cast need wish. The only requirement was that a skirt be long enough to sweep out behind and drag heavily on the floor as the heroine moved. A large feather, drooping sadly from the large hat brim, gave to Hamlet the necessary melancholy air. A train for the heroine and a feather for the hero! It was enough. Of what use is imagination?

And as for playing house!

Shall we shed a tear of regret at the passing of the old-fashioned garret, fragrant with its dried herbs and steeped in an atmosphere of romance? No, for nothing has been lost to the children who have, by prior right, title, inheritance, and custom, the first call and privilege to that portion of the house.

The attic now provides the home with the most delightful of playrooms, that show in every detail a thorough understanding of what a child loves. It is a retreat that is their very own, just as they would have dreamed it. If you told them that the alcoves were formed by chance in the plan of the big house, they would smile incredulously. There is an alcove for each child, where each has her own individual set of furniture, decorated with her own story book pictures. All of them delight in the quaint Kate Greenway figures on the walls and hangings, and the blackboard against the chimney-piece.

Deep shelves furnish cages in which the wild animals sleep at night; and the tired hobby-horse finds a stable and rest. Baby has a playground all her own, out of danger from prancing steed and ranging elephant. There is a quiet corner for nurse, too, fitted out with a low chair and table where she sits with her mending basket. The possibilities of the attic for a real playroom are unlimited and just now coming to be realized. It is a place of enchantment.

What wonderful things are to be seen from the high-up windows where the sunbeams peep in to wake the toys! Perhaps the view may show ships far out on the river or bay, or miles and miles of tree tops tossed in the wind, and soft, white piled-up clouds. When out walking with nurse in the park or grounds, there isn't so much to see; just a little bit close by, and here is a look over the whole, wide world, which is so full of things to make stories about.

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

PATCHING CEMENT FLOORS.

One of the principal objections often raised against the use of concrete finished floors is the difficulty and cost of successfully repairing places that have become worn or damaged. For best results it is usually considered necessary to cut down the worn places at least one and one-half inches into the unbroken concrete, undercut the edges, clean out the dust and loose particles thoroughly, was with a thin cement grout, fill in with a paste grout and finally float to a level surface a mortar of cement and crushed stone or gravel. The patch must then be kept moist for at least a week or ten days, keeping off all traffic in the meantime.

W. P. Anderson, president of the Ferro Concrete Construction Company, recently stated, through the columns of "Safety Engineering," that his company often makes use of a method of patching concrete floors which is much cheaper and requires far less time than the method commonly used. This method requires the use of a mastic material made from a mixture of asbestos fiber and rubber gum. This mixture is applied with a trowel after thoroughly cleaning the damaged surface. Very little cutting of the old concrete is necessary, other than to break off loose particles. The gum can be worked to a feather edge so that it will readily join with the undamaged concrete surface and eliminate the undercutting required with the old method of patching.

A patch of this sort can be opened to foot traffic within a few hours and to heavy traffic within a day or so. Thus it is possible to repair a much-used portion of a mill or factory floor almost over-night. The cost varies with the size of the patch, but will amount to from 16 to 18 cents a square foot.

BUYING A HOME.

Fear of Going Into Debt Prevents Many From Investing.

"I believe the one reason that, more than any other, keeps the average man from buying a home is the fear of going into debt," says "The Real Estate News."

"Isn't that true in your case To show you how little ground there is for such fears, compare buying with your present situation.

"You are now renting. You already have a debt hanging over you of, let us say, \$25 per month, due every month to your landlord. As long as you rent you will always have this to pay (perhaps more), for you and your family must live somewhere. You couldn't go any more into debt of you bought the house. In fact, much less so.

"Let us see. A house renting for \$25 is likely to sell for around \$3,000. You probably have a few hundred dollars saved, so that you can pay 10 per cent. cash, or \$300. The balance you can pay at the rate of 1 per cent. (in this case \$30) a month; only \$5 a month more than you paid for rent.

"In four years you will have paid 58 per cent. of the total amount. Of this 18 per cent. is interest and 40 per cent. is principal. In other words, you will have paid \$1,740, of which \$1,200 is principal, coming back to you in the value of the house. Your only expense in four years has been \$540 plus the taxes and insurance.

"But," you say, "supposing I get sick, or lose my job; what then?" You must admit that such misfortune is equally possible when you rent. You know that at such time no landlord will wait very long for overdue rent.

"On the other hand, in buying you will find that many of the leading real estate companies have a clause in their contracts providing that, in cases of sickness or other good reason for inability to pay, they will only require payment of the interest.

"But even if there were no such provision, at the end of four years you can go into any bank or loan association and borrow 60 per cent. of the value of the house, in this case \$1,800. The interest on this will be only \$9 per month.

"Where can you find a landlord who will take \$9 a month in time of distress for a \$25 house?

"Best of all, buying a house on these terms you don't go on paying the rest of your life; in seven to ten years you are through—the house is yours.

"It's the man who rents who is always in debt. Own your home and you will soon owe no man."

HOW TO KEEP PUTTY SOFT.

Place in a jar or can and keep covered with water. A thin film of lubricating oil on the surface will prevent water from evaporating.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

"KINKS" FOR CARPENTERS.

In the construction or repairing of buildings, it becomes necessary to form estimate of the expense, and hence all persons should have some knowledge of the rules by which mechanics make their calculations.

Timber Measure.

The unit of measure is a square foot 1 inch thick, in measuring boards, plank and timber.

To Measure Inch Boards.

Multiply the length of the board in feet by its breadth in inches, and divide the product by 12; the quotient will be the number of square feet in the boards.

When the board is wider at one end than the other, take the average width, which is found by adding the width of both ends together and taking half the sum.

Example.—How many square feet in a board 10 feet long and 14 inches wide at one end and 10 inches wide at the other?

14 plus 10 equals 24, divided by 2 equals 12, average width; 12 multiplied by 10 equals 120, divided by 12, equals 10 feet. Ans.

To Find the Number of Feet in Scantling.

Multiply the width in inches by the thickness in inches, and that by the length in feet and divide by 12.

Example.—How many feet of lumber in 15 joist 14 feet long, 8 inches wide and 2 inches thick?

8 multiplied by 2 equals 16, multiplied by 14 feet equals 224, divided by 12 equals 18⅔ feet in one joist; 18⅔ multiplied by 15 equals 280 feet.

After having ascertained the number of feet in a given quantity of lumber, sold by the 1000 feet, multiply the number of feet by the price and point off three figures from the right, the remaining figures will represent the price in dollars.

Example.—What cost 280 feet of lumber, as in the above example, when joists are selling at \$14 per thousand feet?

280 multiplied by 14 equals \$3.920. Ans.

ABOUT BRUSHES.

Flat brushes are good for all kinds of painting and most commonly used.

Round and oval brushes are practical tools for outside use. Many painters prefer them to flats.

Varnish brushes. Flat brushes are the most practical for all kinds of varnish, though for large work ovals can be used to advantage.

Sash brushes are round and oval and mostly used for small surfaces. Fitches in sizes from ¾ to 1½ come in handy.

A good set of brushes for home use for outside painting is:

One 3½-inch flat brush (a 3- or 4-inch may be substituted.)

One No. 8 or No. 10 sash tool.

One 1-inch or 1¼-inch fitch.

With these you can paint most any building and do it right.

You should have a set similar to the above for each worker.—"Paint Pointers."

INTERESTING TEST.

New Type of Floor Construction Designed for Economy.

At a time when the high cost of various materials entering into building construction seems to indicate rather desultory activities in the building field, considerable interest attaches to the introduction of an economic factor in this line. A test of a new type of reinforced concrete floor was recently conducted for the Octagonal Reinforced Floor Company, at the official testing grounds of Columbia University, Monitor street and Norman avenue, Greenpoint, borough of Brooklyn, and tested under the supervision of Professor James S. MacGregor of Columbia University.

The slab tested was a 20' 0" square panel, consisting of 6½" cinder concrete slab, mixed in the proportion of one part Portland Cement (Pennsylvania), two parts clean sand and five parts clean cinders. The design of the slab itself is the result of a careful study made by R. S. Chew, C. E., of California, as to the value of a square or rectangular panel, reinforced in two directions, with a wire mesh fabric, in combination with steel bars placed over the column heads and held in position by means of transverse reinforcing. These bars are what might be called diagonal reinforcing as they are laid in a direction of approximately 45 degrees to the main access of the slab. The wire mesh fabric used was Clinton Welded Fabric, 3x16 inches mesh, ⅜ gauge wires. This was furnished by Albert Oliver & Son, Inc., 101 Park avenue, Manhattan.

The test began with an initial loading of 120 lbs. to the square foot. It took approximately 360 lbs. per square foot of loading before the camber of ⅞-in., which was originally placed in the arch was taken out. From this point on, as each successive 120 lb. reading was taken, the deflection showed approximately 1¼ in. for each 120 lbs. per square foot, while at the final reading, when 960 lbs. per square foot had been placed on the arch, the total deflection taken from a reading at the center of the arch was approximately 11½ inches.

The object of the test, which was successful from every standpoint, was to demonstrate the reason why owners of property should be allowed to construct first-class building, more economically than can be done at present. Compared with other types of floor construction this new system has demonstrated its economy and strength, and should be of particular interest at a time when materials of construction are from 40 to 60 per cent. in excess of normal conditions.

PAINTING OLD FLOORS SOAKED WITH FLOOR OILS.

Make a strong solution of oxalic acid in hot water. Apply hot and use scrubbing brush. Then mop with clean water. This effectively draws out the oil.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Church House, Forty-third and Wallace sts., Philadelphia. Architects, Zantzing, Borie & Medary, Otis Building, Philadelphia. Owners, House of St. Michael and All Angels, 209 South Twenty-second street. Stone, brick and hollow tile, 2½ stories, 116x25 feet, 64x24 feet and 107x25 feet, slate roof, cement and linoleum floors, electric lighting, metal lath, dampproofing, fire escape (Kriebel vacuum heating reserved). Architects taking bids, due March 21st. The following are figuring: George A. Fuller & Co., Widener Building; Pringle Borthwick, 8018 Germantown avenue; J. Sims Wilson Co., 1125 Brown street; Graham Campion Co., Otis Building; Metzger & Fisher, Denekla Building; Pomeroy Const. Co., 1609 Ranstead street; H. H. Burrell, 206 South Quince street; Cramp & Co., Denekla Building; Driscoll Co., Stock Exchange Building, Philadelphia.

Police Station and Patrol House, 615 East Girard avenue. Architect, Louis E. Marie, 825 City Hall, Philadelphia. Owners, Bureau of Police, Department of Public Safety, 215 City Hall. Millwork, painting, slate and tin roof, pine floors (plumbing, heating and electric work separate bids). Owners have received bids.

Fire Station (alt.), No. 5, 752 South Sixteenth street, Philadelphia. Architect, Louis E. Marie, 825 City Hall, Philadelphia. Owners, Bureau of Fire, Department of Public Safety, 215 City Hall. Consists of new reinforced concrete floors, plumbing, millwork, electric lighting. Owners have received bids.

Residence, Green and Westview streets, \$9,000. Architect, Andrew C. Borzner, 721 Walnut street, Philadelphia. Owner, Clarence B. Lane, B. S., 6924 MacCallum street. Stone, 3 stories, 28x42 feet, slate roof, hot water heating, electric lighting, hardwood floors, 3 tile bath rooms. Plans in progress. Will take bids in about one week.

Apartment House, Philadelphia, \$100,000. Architect, Andrew C. Borzner, 721 Walnut street, Philadelphia. Owner's name withheld. Brick, 4 stories, 24 apartments, slag roof, steam heating, electric lighting, electric elevator, 1 laundry equipment. Plans in progress. Will be ready for bids in about one month.

Paving, various streets, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Public Works, George E. Datesman, Director, Room 232, City Hall, Philadelphia. Consists of asphalt paving, vitrified, granite and wood block paving and curbing. Owners taking bids, due March 16th at noon.

Residences (26), Tenth and Fischer's avenue, Philadelphia. Architect, private plans. Owners, Penn Realty and Const. Co., Ogontz and Cheltenham avenues. Brick, 2 stories, 16x47 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owners sub-letting. Will start work in a few days.

Marquise, Thirteenth and Callowhill streets, Philadelphia. Architect, Frank E. Hahn, 1112-14 Chestnut street, Philadelphia. Owners, National Metal Edge Box Co., 1217 Callowhill street. Corrugated iron and glass, 76x120 feet. Architect has received bids.

Central Library, Nineteenth to Twentieth, Vine to Wood streets, \$3,050,000. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owners, City of Philadelphia, care of Librarian, John Ashhurst, Thirteenth and Locust streets, Philadelphia. Limestone and granite, 3 stories, 207x328 feet, tile, slag and copper roof, 4 passenger elevators, 6 freight and book elevators, marble, tile and cork floors, safety treads, kalamendi sash, steel doors, ventilators, waterproofing and dampproofing, metal lath (steam heating, electric lighting and plumbing separate bids). Architect taking bids, due March 27th. Cramp & Co., Denekla Building; Thomas Reilly, 1618 Thompson street; George F. Payne & Co., 401 South Juniper street; George A. Fuller & Co., Widener Building; Edw. Atkins, 249 South Twenty-fourth street; Charles McCaul Company, 1713 Sansom street, all of Philadelphia; John Gill & Sons Co., Cincinnati, Ohio; John T. Brady & Co., 103 Park avenue, and Thomson-Starrett Co., 49 Wall street; J. C. Rodgers, 271 West 125th street; T. J. Carmin Cons. Co., 1123 Broadway, New York City, are figuring.

Residence (alt. and add.), Seminole avenue, Chestnut Hill, Pa. Architect, John Graham, Jr., Real Estate Trust Building, Philadelphia. Owner, J. Leeds Barrell, 7207 Charlton avenue, Chestnut Hill. Stone, 3 stories add., 40x20 feet, shingle roof, hot air heating, electric lighting, hardwood floors, tile work. Plans in progress. Architect will take bids about April 1st.

Garage, northwest corner of Seventh and Spring Garden streets. Architect, Frank V. Greenstein, Empire Building, Philadelphia. Owners, Very Best Garage Co., care of M. Berger & Co., northeast corner Seventh and Green streets, Philadelphia. Brick and concrete, 2 stories, 87x115 feet, slag roof, steam heat, electric lighting, cement and plank floors, gasoline storage. Plans in progress. Architect and owners will take bids in two weeks.

Factory (add.), Twenty-fifth and Hunting Park avenue, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Edw. G. Budd Mfg. Co., Twenty-fifth and Hunting Park avenue. Brick, steel and reinforced concrete, 3 stories, concrete and slag roof, steam heating, electric lighting, fire doors, metal lath, waterproofing. Architects taking bids, due March 19th. The following are figuring: Irwin & Leighton, 126 North Twelfth street; Cramp & Co., Denekla Building; Barclay White & Co., 1713 Sansom street; Turner Concrete Steel Co., 1713 Sansom street; Warren-Moore Co., Commercial Trust Building, and F. W. Mark Const. Co., Finance Building, Philadelphia.

Sunday School, Fifty-eighth and Springfield avenue, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Springfield M. E. Church, George P. Beck, pastor, 5852 Warrington avenue, Philadelphia. Stone, 2 stories and basement, 70x70 feet, slate roof, pine floors, electric lighting. Architects taking bids, due March 19th. H. E. Baton, Twelfth and Sansom streets; F. L. Hoover & Sons, 1023 Cherry street; A. R. Raff Const. Co., 1635 Thompson street; F. E. Wallace, 1220 Cancellor street; H. C. Rea Co., 1027 Wood street; F. B. Davis, 240 North Sixteenth street; H. H. Burrell, 206 South Quince street; R. C. Ballinger & Co., 218 North Thirteenth street; Thomas C. Trafford, 1613 Sansom street, and Wm. J. Gruhler & Co., 219 East High street, are figuring.

Garage, southeast corner of Fifty-sixth and Baltimore avenue, Philadelphia. Architect, private plans. Owner, I. S. Stein, care of builder. Brick, 1 story, 80x100 feet, slag roof, cement floors. Conneen Const. Co., 1737 Filbert street, taking sub-bids, due as soon as possible.

Residences and Garages in basements (8), Fifty-eighth and Walnut streets. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Barnet Saidel, Eleventh and Wyoming avenue, Philadelphia. Brick, (1) 2 stories, 36x32 feet, (6) 2 stories, 16x52 feet, and (1) 2 stories, 16x32 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work, cement floors. Plans in progress. Owner will take sub-bids in two weeks.

Garage, southwest corner of Twenty-second and Race streets, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, H. Fryman, 168 North Twenty-second street, Philadelphia. Brick, steel and concrete, 2 stories, 55x90 feet, slag roof, steam heating, electric lighting, metal sash, electric elevator, rolling steel doors, cement floors, gasoline storage system. Plans in progress. Will be ready for bids in one week.

Store and Residences (remodeling), 244 N. Twenty-second street. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, H. Fryman, 168 North Twenty-second street, Philadelphia. Brick, 3 stories, 16x66 feet, general exterior and interior remodeling, slag roof, hot water heating, modern plumbing, tile work, metal bulks, plate glass, steel work. Plans in progress.

Store and Apartments, Eighty-fourth and Eastwick avenue, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Samuel Shain, on premises. Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

TO MEASURE AN ACRE.

To measure an acre in rectangular form is a simple question in arithmetic. One has only to divide the total number of square yards in an acre, 4,840, by the number of yards in the known side or breadth to find the unknown side in yards. By this process it appears that a rectangular strip of ground—

5 yards wide by 968	yards long is 1 acre.
10 yards wide by 484	yards long is 1 acre.
20 yards wide by 242	yards long is 1 acre.
40 yards wide by 121	yards long is 1 acre.
80 yards wide by 60½	yards long is 1 acre.
70 yards wide by 69½	yards long is 1 acre.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LITHOFORM

A Positive Primer

FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

Per Gallon, \$3.00

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 12

PHILADELPHIA
March 21, 1917

As The Editor Sees It

IF one of the objects of organizing an annual exhibition made up of architectural drawings, photographs of completed work, and sketches, in color and in black-and-white, of bits of impressive detail, is to educate the layman to a becoming sense of appreciation of the beautiful why limit access to such persons as may be induced to visit a gallery?

It has occurred to me that if some arrangement could be made whereunder the drawings shown in the annual exhibition might be loaned, after its close, to the various branch and main High Schools and then to the recreation centers for a brief period, there to be made the theme of instructive little talks upon architecture, a great and lasting impression might be made upon the minds of thousands of young people who do not frequent the art galleries and who have been led to regard architecture as a something too highly technical and complicated for the average, every-day order of intelligence to grasp.

* * *

I AM confident that if it were made known that the drawings shown in the annual architectural exhibition were available for school exhibitions, by arrangement, there would be an immediate demand for them in quarters in which the soil is highly favorable to the advancement of popular taste.

Besides the schools and the recreation centers, and the various settlement-houses there are the branch libraries. Why, wouldn't it be altogether feasible to exhibit these drawings for a time in each of the branch libraries? I feel sure that there would be the keenest interest on the part of the people in sectional exhibitions of the kind. More particularly

would this be the case if in conjunction with each exhibition there could be arranged a free lecture dealing with an architectural subject. The Municipal Art Society in New York City is doing a work largely similar to that here outlined with the most flattering results. If for ethical or other reasons there should be a disposition on the part of the architects to shrink from handling the management of such a scheme, themselves, then let us organize here a Municipal Art Society to take the matter in hand.

* * *

I AM so completely assured that the idea is in every way practical and conducive to good results that I am not only ready to become a member of the Municipal Art Society, if such an organization is attempted, but will agree to take upon myself some of the work necessary to place the idea on a sound working basis. In fact, I shall be pleased to hear from architects and others interested. It seems to me that so patent an opportunity to advance public interest in one of the greatest and most enduring of the arts should not lightly be overlooked.

* * *

THE Philadelphia Chamber of Commerce will deserve the thanks of good citizens for its efforts to promote a progressive policy with regard to the Parkway and the various minor projects incident thereto. "Leading as it will from the massive City Hall directly to Fairmount Park" remarks the *Chamber of Commerce Journal*, "opportunity exists to make the Parkway at once the most notable highway in the country. Lined on either side with the Municipal Auditorium, the Art Gallery, and other structures of architectural dignity, it requires little imagination to

picture the beauty of this broad walk and driveway. In its present unfinished state, however, it is little less than an eyesore. This is all the more reason for hastening the work of construction. By all means the city should complete the Parkway without further argument or delay."

* * *

MENTION of the Municipal Auditorium reminds me that in response to popular agitation in opposition to a hall of 6,000 capacity, Mayor Smith has ordered a change in plans and design such as will enable the city to build a hall of 12,000 seating capacity for the same amount of money. If this change involves a sacrifice of architectural impressiveness, for the sake of mere capacity, it is a change, the wisdom of which will be open to question. While we agree with the trade organizations in their contention that a seating capacity of 12,000, with ample exhibition space, should be insisted upon in the new auditorium we are inclined sharply to disagree with the argument heard in this connection, that utility is the chief end to be served. If the Art Jury is anything more than an empty title for a something which does not exist it will decline absolutely to sanction the erection on the Parkway of any structure that fails to measure up to a certain fixed architectural standard.

* * *

IT should be kept in mind that the chief object of the Parkway is the beautification of Philadelphia. A city beautiful is a city of beautiful buildings. The pace in this respect will be governed largely by the example the city sets in its contributions to the dignity of the new boulevard. Beauty is inspired by beauty. Like begets like. Let

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia

**BLUE
PRINTS**

the city embark upon a policy of cheap, undistinguished buildings and inside of five years the Parkway will become ar-

chitecturally a chamber of horrors. To get anywhere the prime essential is to start right.

EDITORIAL NOTES

CONTRACTS FOR DEMOLISHING 200 buildings on the line of the Parkway, west of 15th street, were awarded by Director of Public Works Datesman, on the basis of the best proposals made by contractors last week.

The city will pay \$3,688 on three sections, and receive \$785 on one. In both cases the contractor retains all building material. The work must be completed by June 15.

* * *

UNIVERSAL PORTLAND CEMENT CO. announces the succession of R. L. Slocum to the position of assistant superintendent of Mill No. 5, at Universal, Pa., made vacant by the death of R. F. Knoth.

* * *

THIS IS A GOOD TIME TO order the shrubbery for the improvement of the home grounds. Good plantings are an investment in beauty and will actually improve the selling price of a place.

* * *

ASIDE FROM THE HIGH PRICES of building materials and supplies, one of the chief difficulties in the path of the contractors and speculative builders is the problem of obtaining materials in sufficient quantities. In practically all lines of materials the existing stocks in the hands of dealers are at low ebb and with the present freight situation there is but little prospect that deliveries will be assured for some time. The freight situation is somewhat better than it has been, but until the weather moderates and the present congestion is cleared up there is no possibility of the arrival of normal conditions in this quarter.

At this writing there is no relief in sight from the existing high prices of structural commodities. There are too many elements affecting the material market at this time to make possible a recession in prices. Freight embargoes, short stocks, increased manufacturing costs, scarcity of labor and abnormal demand are all factors that contribute to the high cost, and until these can be adjusted no reduction is in sight.

* * *

THE KITTANNING SALES CO., INC., manufacturers of building brick, announce the removal of their offices on February 1st to 841 Broadway, New York City. This firm was located for

many years at 1133 Broadway. At their new address, they will have a very handsome display room and will be in better shape to handle the business of their many customers. Their new telephone numbers are Stuyvesant 237-238.

* * *

UNDER THE AUSPICES OF the Joint Committee of the Beaux Arts Institute of Design and the National Sculpture Society, the second competition for a figure to occupy one of the niches in the stair hall of the Plainfield Municipal Building is to be held. The subject of this decoration is "Civic Virtue." Models of the figure or group only at a scale of two inches to the foot are to be delivered before noon, April 6th, 1917, at 126 E. 75th street, New York City; the judgment to be at 5 P. M. on the same day. Particulars may be obtained on application to Mr. Fred B. Clarke, Secretary, at the above address.

* * *

NOTWITHSTANDING THE TENDENCY toward higher building material prices, which have affected practically all lines during the last few weeks, there seems to be a better feeling throughout the trade than for some time past. While the general conditions are not good, they are showing distinct signs of improvement, and the result will be a changed mental attitude for the builder and supply dealer. According to authentic reports from the local territory and, in fact, from the entire Eastern section of the country, active progress is apparent in the building field. Structural projects that have been held in abeyance since last autumn have come to life; new operations are developing daily and, from the amount of work on the boards in the offices of the architects, it would seem as though the building industry in these parts was about to embark on a period of intense activity.

* * *

THE PORTLAND CEMENT ASSOCIATION of 111 West Washington street, Chicago, have prepared a booklet bearing the same title, which is an enlarged re-issue of their former booklet, "Concrete in Winter." Owing to the shortage of labor which has interfered with contracting this season, it is probable that many contractors will be engaged

in concrete work during the coming cold weather. The simple suggestions and recommendations made in the pamphlet are such that they may be easily followed even by those least experienced in concrete work, and it is recommended that all contractors apply to the association for a copy of this new pamphlet.

* * *

UNDER APPROPRIATE TITLE, Technological Paper, No. 70, of the Bureau of Standards, has just been issued. This paper is prepared by R. J. Wig, Engineer Physicist, J. C. Pearson, Associate Physicist, and W. E. Emley, Associate Chemist.

This paper presents a report of progress in an investigation of stucco and plaster undertaken by the Bureau of Standards five years ago, in co-operation with the Associated Metal Lath Manufacturers. In 1915 a test building, 200 feet long, was erected, having fifty-six panels representing the common types of stucco construction, including a variety of mixtures on metal lath, wood lath, hollow tile, brick, concrete block, plaster board, gypsum block and concrete bases. Examination of the panels six months after completion showed that a number were in poor condition. About forty were rated as satisfactory, the remainder being in various stages of deterioration. It is evident that the smooth type of finish known as the sand float finish is well adapted to bringing out the small defects, such as cracks, blotches, uneven texture, etc. This paper contains suggestive information, but definite recommendations are deferred until further service test results are known.

This paper is now ready for distribution and those interested may obtain a copy by addressing a request to the Bureau of Standards, S. W. Stratton, Director, Washington, D. C.

* * *

THREE PRIZES, a first, second and third, are being offered by the Metal Club of Philadelphia for the best advertisements of tin roofing inserted in a newspaper or other periodicals, by roofers and sheet metal contractors. The prizes comprise two Elgin thin model, twenty-year, and a Geneva ten-year guarantee gold watch. The contest is open to all customers of members of the Metal Club. Full particulars concerning rules, etc., may be had by addressing George A. Fernley, secretary, 505 Arch street, Philadelphia, Pa.

* * *

NATIONAL FIRE PROTECTION ASSOCIATION will hold its annual meeting in Washington, D. C., May 8-10, 1917.

NATIONAL PIPE AND SUPPLIES ASSOCIATION will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

* * *

AMERICAN IRON, STEEL AND HEAVY HARDWARE ASSOCIATION will hold its convention at the Hotel Grunewald, New Orleans, La., March 27-29. Arthur H. Chamberlain, Marbridge Building, New York City, is the secretary.

ARCHITECTURAL NOTES.

****THE OFFICES OF D. KNICKERBACKER BOYD**, architect, have been moved to the Otis Building, 112 South Sixteenth street, Philadelphia. Associated with Mr. Boyd is Victor Darwin Abel.

* * *

****ARNOLD EBERHARD**, for the past four years connected with the office of Paul A. Davis, 3rd, has opened offices for the practice of architecture in the Crozer Building, 1420 Chestnut street, where he will be pleased to receive samples, catalogues, etc.

* * *

****HANCOCK & KOCH**, architects, have moved their offices from Coal Exchange Building to Mears Building, Scranton, Pa.

* * *

****PAYNE & ADAMS**, architects and engineers, have moved their offices from 81 State street to the Barrows Building, 253 State street, New London, Conn., and would be pleased to receive manufacturers' samples and catalogues.

* * *

****LANSING, BLEY & LYMAN**, architects, are moving to new offices in the Delaware Court Building, 250 Delaware avenue, Buffalo, N. Y.

* * *

****PHILIP L. GOODWIN**, Roger H. Bullard and Heathcote M. Woolsey have formed a partnership for the practice of architecture and have opened offices at 4 East Thirty-ninth street, Manhattan, under the firm name of Goodwin, Bullard & Woolsey.

* * *

****THE PARTNERSHIP OF McLAUGHLIN & JOHNSON**, architects, has been dissolved as of January 1st, 1917. Mr. Johnson retiring from the firm. Mr. McLaughlin will continue the business located in the People's Bank Building, Lynchburg, Va., and has so arranged his organization that all work will be skillfully planned and have the closest personal supervision as heretofore.

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

ESTIMATED WEIGHT OF LUMBER AND OTHER ARTICLES.

Note.—From 18,000 to 20,000 pounds is considered a car load in most places, each car itself also weighing about 20,000 pounds.

Light Lumber.

Pine, hemlock and poplar, thoroughly seasoned, per thousand feet, 3,000 pounds. Amount for car load, 6,500 feet.

Black walnut, ash, maple and cherry, per thousand feet, 4,000 pounds. Amount for car load, 5,000 feet.

Medium lumber.

Pine, hemlock and poplar, green, per thousand feet, 4,000 pounds. Amount for car load, 5,000 feet.

Black walnut, maple, ash and cherry, green, per thousand feet, 4,500 pounds. Amount for car load, 4,000 feet.

Oak, hickory and elm, dry, per thousand feet, 4,000 pounds. Amount for car load 5,000 feet.

Heavy Lumber.

Oak, hickory and elm, green, per thousand feet, 5,000 pounds. Amount for car load, 4,000 feet.

Oak, hickory and elm, part seasoned, per thousand feet, 4,500 pounds. Amount for car load, 4,500 feet.

Shingles, green, per thousand, 375 pounds. Amount for car load 55 thousand.

Shingles, dry, per thousand, 275 pounds. Amount for car load, 70 thousand.

Lath, per thousand, 500 pounds. Amount for car load, 40 thousand.

Brick, common, per carload, 4 pounds each, 5,000.

Fire brick, per car load, 6 pounds each, 3,000. Sand, per cubic yard, 3,000 pounds. Amount for car load, 6½ cubic yards.

Gravel, per cubic yard, 3,200 pounds. Amount for car load, 6 cubic yards.

Stone, undressed, per cubic yard, 4,000 pounds. Amount for car load, 5 cubic yards.

Stone, per car load, 20,000 pounds.

QUANTITY OF OIL REQUIRED FOR DIFFERENT COLORS.

Color manufacturers quote the following figures:

	Parts of Oil.
100 parts (weight) White Lead require....	12
100 parts (weight) Zinc White require....	14
100 parts (weight) Chrome Yellow require....	19
100 parts (weight) Vermilion require....	25
100 parts (weight) Light Red require....	31
100 parts (weight) Madder Lake require....	62
100 parts (weight) Yellow Ochre require....	66
100 parts (weight) Light Ochre require....	72
100 parts (weight) Camels Brown require..	75
100 parts (wtg) Brown Manganese require..	87
100 parts (weight) Terre Verte require....	100
100 parts (weight) Parisian Blue require....	106
100 parts (wtg) Burnt Terreverte require..	112
100 parts (weight) Berlin Blue require....	112
100 parts (weight) Ivory Black require....	112
100 parts (weight) Cobalt require....	125
100 parts (wtg) Florentine Brown require..	150

100 parts (wtg) Burnt Terra Sienna require.181

100 parts (wtg) Raw Terra Sienna require.140

According to this table, a hundred parts of the quick drying white lead are ground with 12 parts of oil, and on the other hand slow drying ivory black requires 112 parts of oil.

RELATIVE HARDNESS OF WOODS.

Taking shell bark hickory as the highest standard of our forest trees, and calling that 100, other trees will compare with it for hardness as follows:

Shell Bark Hickory	100
Pignut Hickory	96
White Oak	84
White Ash	77
Dogwood	75
Scrub Oak	73
White Hazel	72
Apple Tree	70
Red Oak	69
White Beech	65
Black Walnut	65
Black Birch	62
Yellow Oak	60
Hard Maple	56
White Elm	58
Red Cedar	56
Wild Cherry	55
Yellow Pine	54
Chestnut	52
Yellow Poplar	51
Butternut	43
White Birch	43
White Pine	30

Timber intended for posts is rendered almost proof against rot by thorough seasoning, charring and immersion in hot coal tar.

STONE AND BRICK WORK.

Stone walls are measured and estimated by the perch, which is equal to 24½ cubic feet. Cut stone, ordered to certain sizes, for arches or fronts of buildings, is sold by the cubic foot. In estimating the stone in a wall, no deductions are made for the openings, such as doors and windows, less than one perch, and the perch is then usually reckoned at 25 cubic feet. The labor of plumbing and squaring openings for doors and windows is equivalent to laying the solid wall, hence no deductions are made for the labor on account of openings, and, in fact, where there are many windows, something is added.

Bricklayers' work is estimated by the thousand brick laid in the wall. A certain number of bricks are allowed to the superficial foot. The usual size of a brick is 8 inches long, 4½ inches wide, and 2½ inches thick, but in different localities and by different manufacturers the size varies a little. The mortar used in the wall is about one-eighth additional to the bricks.

Scale.

Bricks.

4½-in. wall (¾ brick) per superficial ft. 7
9-in. wall (1 brick) per superficial ft. 14
13-in. wall (1½ bricks) per superficial ft. 21
18-in. wall (2 bricks) per superficial ft. 28
22-in. wall (2½ bricks) per superficial ft. 35
and seven bricks additional for each half brick added to the thickness of the wall.

To find the number of bricks in a wall, multiply the length in feet by the height in feet, deduct for the openings, and multiply by the number of bricks in the above scale, corresponding to the thickness of the wall.

A load of mortar measures 1 cubic yard, or 27 cubic feet, and requires one cubic yard of sand, and 9 bushels of lime, and will fill 30 hods. A bricklayer's hod is 1 foot 4 inches x 9 inches x 9 inches, and will carry 20 bricks, or ¾ cubic foot of mortar, or nearly ½ bushel. Bricks absorb 1-15 of their weight in water.

Classes of work in masonry are three, which consist of rubble work, wherein the stones are not squared; coursed work, in which the stones are set in courses; and ashlar, in which each stone is squared and dressed.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

An advertisement should stick out like a sore thumb without being so sensitive.—"Novelty News."

POINTERS ON PLASTERING.

Plasterers' Work.

The square yard is the unit of measurement for plastering plain work, such as walls and ceilings. Mouldings, cornices, center pieces and panels are charged for by the square foot or by the linear foot. No deductions are made for openings less than about 5 square yards, and sides of chimneys and strips of plastering less than 12 inches are measured as 12 inches wide. Where the plastering is finished down upon the wainscoting or base boards, add six inches to the height of the wall. In closets add one-half to the measurement. Circular work, mouldings, etc., are usually charged for according to the time and skill required, and really bear no proportion to the cost of ordinary plastering.

To Find the Number of Yards of Plastering in a Room.

Find the surface of each wall separately by multiplying its length by its breadth in feet, add together these various surfaces, and divide by 9 to find the number of yards of plastering, and this multiplied by the cost per yard of plastering will give the cost of plastering the room.

One thousand lath will cover 70 yards of surface, and 11 pounds of lath nails will nail them on. 8 bushels of good lime, 16 bushels of sand, and one bushel of hair will make enough good mortar to plaster 100 square yards of wall two coats. 100 lath make a bundle, and on the wall they should be set ¼ inch apart.

Painters' and Calciminers' Work.

Painters' work is estimated by the square, which is 100 square feet, or a surface 10 feet long and 10 feet wide. No deductions are made for windows, and something is added for difficult cornices, balusters, etc.

Multiply the length of each surface painted by its width and point off two places from the right, this will give the number of squares, which multiplied by the price will give the cost of painting for one, two, or three coats, as the case may be.

SOME GOOD ADVICE.

You want some good advice. Rise early. Be abstemious. Be frugal. Attend to your own business and never trust it to another. Be not afraid to work, and diligently, too, with your own hands. Treat every one with civility and respect. Good manners insure success. Accomplish what you undertake. Divide, then persevere. Diligence and industry overcome all difficulties. Never be mean—rather give than take the odd shilling. Never postpone till to-morrow what can be done to-day. Never anticipate wealth from any source but labor. Honesty is not only the best policy, but the only policy. Commence at the first round and keep climbing. Make your word as good as your bond. Seek knowledge to plan, enterprise to execute, honesty to govern all. Never overtrade. Never give too large credit. Time is money. Reckon

the hours of the day as so many dollars, the minutes as so many cents. Make few promises. Keep your secrets. Live within your income. Sobriety above all things. Luck is a word that does not apply to a successful man. Not too much caution—slow but sure is the thing. The highest monuments are built piece by piece. Step by step we mount the pyramids. Be bold—be resolute when the clouds gather, difficulties are surmounted by opposition. Self-confidence, self-reliance is your capital. Your conscience the best monitor. Never be over-sanguine, but do not underrate your own abilities. Don't be discouraged. Ninety-nine may say no, the hundredth, yes; take off your coat, roll up your sleeves; don't be afraid of manual labor! America is large enough for all—strike out for the West. The best letter of introduction is your own energy. Lean on yourself when you walk. Keep good company. Keep out of politics unless you are sure to win—you are never sure to win, so look out.

KEEP YOUR CREDIT GOOD.

Remember that it not only pays to advertise but that it also advertises to pay.

THE TRIAL BALANCE.

Stenographer: "Why is it called a trial balance?"

Bookkeeper: "Because when it doesn't it is."

THE MODERN BUILDER.

Inventive geniuses abound
Where'er necessity is found;
The builder who is up to snuff
Knows very well it's not enough
To build his houses on a plan
Devised before B. C. began;
For nowadays each season brings
New ways and means of doing things.
The modern builder, shrewd and wise
Consults the firms who advertise.

To make the illustration clear
Look up the record of each year,
Observe how industry has sped
With sure and steady growth ahead;
Compare the modern house with those
You knew when in your swaddling clothes.
To-day from basement to the roof
Each wall and ceiling shows the proof,
For each room is a perfect part
Of comfort counterpoised with art.

The parlor door throw open wide
And see the paneled walls inside,
Where shaded tints and tones agree
In perfect blended harmony.
In every room, with tasteful tone,
The skillful artisan has shown
How little labor forms a part
When wall board supplements his art,
And in the modern home no bare
Unfinished room is anywhere.

—Frank Adams Mitchell, in "National Builder."

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Factory Building and Power House, Memphis and Tioga streets, Philadelphia. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. Owners, Treen Box Co., on premises. Brick (slow burning), factory, 2 stories and basement, 60x100 feet; power house, 1 story, 30x60 feet, slag roof, steam heating, electric lighting, metal lath, cement and plank floors. Plans in progress.

Department Store, 2204-12 North Broad st., Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, James B. Gilles, 2200 North Broad street, Philadelphia. Brick, steel and terra cotta, 2 stories and basement, 68x90 feet, slag floor, steam heating, electric lighting, metal lath, fire doors, pine floors, tile and marble work. Plans in progress.

Maternity and Dispensary Building, 1234 North Fifty-fourth street, Philadelphia. Owners, West Phila. General Homoeopathic Hospital, on premises. Brick and concrete, terra cotta trimmings, 2 stories and basement, 36x80 feet, slag roof, cement floors, metal lath, tile and marble work (steam heating and electric work reserved). Plans in progress.

Residence, Rising Sun avenue, Chestnut Hill, Pa. Architect, E. M. Van Voorhees, Hale Building, Philadelphia. Owner, L. M. Martin, care of architect. Frame, 2 stories, 37x21 feet, shingle roof, pine floors, hot water heating, electric lighting. Plans in progress.

Studio (alt. and add.), 1320 Walnut street, Philadelphia. Architects, Mellor, Meigs & Howe, 205 S. Juniper street, Philadelphia. Owners, Rosenbach Co., 1320 Walnut street, Philadelphia. Brick, 3 stories, 21x48 feet, tin roof, pine and oak floors, metal lath and sash, tile and marble work (electric lighting and heating reserved). Architects taking bids, due March 23d. R. C. Ballinger & Co., 213 North Thirteenth street; Freund Const. Co., Bulletin Building; H. H. Burrell, 208 South Quince street, and Ketcham & McQuade, 1029 Brown street, are figuring.

Residences (25), Marine street, between Wingohocking and Courtland streets. Architect, private plans. Owners, John F. McGinty & Co., Twelfth and Courtland streets. Brick, 2 stories, 16x46 feet, slag roof, hot water heating, electric lighting, metal lath, hardwood floors, tile work. Owner will be ready for sub-bids in a week.

Motion Picture Theatre (alt.), Seventh and Snyder avenue, Philadelphia. Architect, Frank V. Greenstein, 715 Empire Building, Philadelphia. Owners, Grand Theatre Amusement Co., on premises. Brick, steel and terra cotta, 1 story, 75x135 feet, slag roof, cement floors, electric lighting, metal lath, tile and marble work, terrazzo work (lighting fixtures, pipe organ and interior decorating reserved). Architect taking bids, due March 22d. The following is the revised list of bidders: Ketcham & McQuade, 1029 Brown street;

Freund Const. Co., Bulletin Building; Lam Building Co., 1001 Wood street; Smith-Hardican Co., 1605 Cherry street; G. J. Reich, Boulevard and Broad street; Wills, Ludwick Co., 34 South Seventeenth street, Philadelphia.

Turntable and Crane, Tulip and Emerald streets, Philadelphia. Engineer, Samuel T. Wagner, Reading Terminal, Philadelphia. Owners, Phila. & Reading Railway Co., Reading Terminal, Philadelphia. Reinforced concrete and steel, consists of 100 ft. turntable and a traveling crane. Owners ready for bids, due March 26th at noon.

Church, Twenty-seventh and Indiana avenue, Philadelphia. Architects, Stackhouse & Street, 129 South Fifth street, Philadelphia. Owners, Diamond Street Baptist Church, Rev. Geo. E. Rees, 2327 Venango street, Philadelphia. Stone and plaster, 1 story and basement, 50x85 feet, slate roof, pine floors, electric lighting. Architects taking bids, due March 24th at noon. E. C. Durrell, 1713 N. Twenty-fourth street; E. E. Hollenback, Inc., 1804 Brandywine street; F. B. Davis, 240 N. Sixteenth street; T. C. Trafford, 1613 Sansom street; A. R. Raff Const. Co., 1635 Thompson street; F. W. Mark Const. Co., Finance Building, and Harry E. Sweger, 4435 N. Uber street, Philadelphia, are figuring.

Manufacturing Building and Garage, 325-29 Market street, Philadelphia. Architects, Peacock & Wunder, 310 Chestnut street, Philadelphia. Owner, name withheld. Brick and concrete, 2 or 1 stories, 51x64 feet and 18x65 feet; garage, 1 story, 30x30 feet, slag roof, maple or pine and cement floors, metal window guards (heating and electric work reserved). Architects have received bids.

Sanitarium (alt.), Germantown avenue and City line, \$15,000. Architect, Henry L. Reinhold, Jr., 1309 Walnut street, Philadelphia. Owners, Bella Vista Sanitarium, Dr. H. L. Randall, on premises. Brick, 2 stories and basement, slate roof, steam heating, electric lighting. Architect taking revised bids, due March 23d. The following are figuring: Wm. C. Wright, 22 Harvey street; Henry P. Schneider, 3713 Old York road; Eugene Tourison, 1001 Chestnut street; Geo. S. Roth & Sons, 230 E. Gravers lane; Alex. Chambley, 243 South Tenth street; Nickson-Duggan Const. Corp., 1213 Chestnut street; Pringle Borthwick, 3018 Germantown avenue, and John E. Walt, 204 E. Willow Grove avenue; Wark-Yardley Co., 1737 Filbert street, Philadelphia.

Store and Dwelling (alt. and add.), 1412 Point Breeze avenue. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, H. Vederman, on premises. Consists of general interior and exterior alterations, hot water heating, electric lighting, tile work, cement work, plate glass, slag roof, metal

ceiling. Owner will take bids in about one week.

Factory, (northeastern section), Philadelphia. Architect, Frederick T. Uezzell, 147 N. Third street, Philadelphia. Owner, name withheld. Brick (slow burning), 3 stories, 50x130 feet, slag roof (steam heating, electric lighting and plumbing reserved), (1) freight elevator, rolled steel sash, rolling steel doors, ventilators, metal skylights. Plans in progress. Architect will be ready for bids about April 1st.

Stores (3) and Garage Building (northeastern section), Philadelphia. Architect, Frederick T. Uezzell, 147 North Third street, Philadelphia. Owner, name withheld. Brick and stone, 2 stories, 110x65 feet, slag roof (steam heating, electric lighting and plumbing, reserved), metal skylights, ventilators, metal store fronts, rolling steel doors, gasoline storage system, air pump. Plans not completed. Architect will be ready for bids in a few days.

Machine and Electrical Shop, League Island, Philadelphia. Architect, private plans. Owners, U. S. Govt., Bureau of Yards and Docks, F. R. Harris, chief, Washington, D. C. Reinforced concrete, hollow tile and steel, 4 stories, 130x325 feet, slag roof, pine floors, rolled steel sash, fire doors (plumbing, heating, electric work separate bids), rolling steel shutters. Owners taking bids, due April 24th at 11 A. M. Irwin & Leighton, 126 N. Twelfth street, Philadelphia, are figuring.

Residences (6), Rising Sun avenue and Bleigh street, Fox Chase, Philadelphia. Architect, Wm. F. Koelle & Co., Twenty-sixth and Thompson streets. Owners, Wm. F. Koelle & Co., Twenty-sixth and Thompson streets. Brick, 2 stories, 16x41 feet, slag roof, hot water heating, electric lighting, tile work, pine floors. Owners taking sub-bids.

Passenger Station (alt. and add.), Cheltenham, Philadelphia, \$35,000. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. RR. Co., Broad Street Station, Philadelphia. Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

HOW TO MAKE SOLDER.

1. Plumbers' solder.—Lead 2 parts, tin 1 part.
2. Tinmen's solder.—Lead 1 part, tin 1 part.
3. Zinc solder.—Tin 1 part, lead 1 to 2 parts.
4. Pewter solder.—Lead 1 part, bismuth 1 to 2 parts.
5. Spelter solder.—Equal parts copper and zinc.
6. Pewterers' soft solder.—Bismuth 2, lead 4, tin 3 parts.
7. Another.—Bismuth 1, lead 1, tin 2 parts.
8. Another pewter solder.—Tin 2 parts, lead 1 part.
9. Glaziers' solder.—Tin 3 parts, lead 1 part.
10. Solder for copper.—Copper 10 parts, zinc 9 parts.
11. Yellow solder for brass or copper.—Copper 32 lbs., zinc 29 lbs., tin 1 lb.
12. Brass solder.—Copper 61.25 parts, zinc 38.75 parts.
13. Brass solder, yellow and easily fusible.—Copper 45, zinc 55 parts.
14. Brass solder, white.—Copper, 57.41 parts, tin 14.60 parts, zinc 27.99 parts.
15. Another solder for copper.—Tin 2 parts, lead 1 part. When the copper is thick heat it by a naked fire, if thin use a tinned copper tool. Use muriate or chloride of zinc as a flux. The same solder will do for iron, cast iron, or steel; if the pieces are thick, heat by a naked fire or immerse in the solder.
16. Black solder.—Copper 2, zinc 3, tin 2 parts.
17. Another.—Sheet brass 20 lbs., tin 6 lbs., zinc 1 lb.
18. Cold brazing without fire or lamp.—Fluoric acid 1 oz., oxy muriatic acid 1 oz., mix in a lead bottle. But a chalk mark each side where you want to braze. This mixture will keep about 6 months in one bottle.
19. Cold soldering without fire or lamp.—Bismuth $\frac{1}{4}$ oz.,

quicksilver $\frac{1}{4}$ oz., block tin lings 1 oz., spirits salts 1 oz., all mixed together. 20. To solder iron to steel or either to brass.—Tin 3 parts, copper 39½ parts, zinc 7½ parts. When applied in molten state it will firmly unite meals first named to each other. 21. Plumbers' solder.—Bismuth 1, lead 5, tin 3 parts, is a first-class composition. 22. White solder for raised Britannia ware.—Tin 100 lbs., hardening 8 lbs., antimony 8 lbs. 23. Hardening for Britannia.—(To be mixed separately from the other ingredients.) Copper 2 lbs., tin 1 lb. 24. Best soft solder for cast Britannia war.—Tin 8 lbs., lead 5 lbs. 25. Bismuth solder.—Tin 1, lead 2, bismuth 3 parts. 26. Solder for brass that will stand hammering.—Brass 78.26 parts, zinc 17.41 parts, silver 4.33 parts, add a little chloride of potassimu to your borax for a flux. 27. Solder for steel joints.—Silver 19 parts, copper 1 part, brass 2 parts. Melt together. 29. Solder for brass.—Copper 3 parts, zinc 1 part, with borax. 30. Solder for copper.—Brass 6 parts, zinc 1 part, tin 1 part, melt all together well and pour out to cool. 31. Solder for platina.—Gold with borax. 32. Solder for iron.—The best solder for iron is good tough brass with a little borax.

N. B.—In soldering, the surfaces to be joined are made perfectly clean and smooth, and then covered with sal. ammoniac, resin or other flux, the solder is then applied, being melted on and smoothed over by a tinned soldering iron.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 17, 1917.—Sealed proposals will be received at this office until 3 P. M. April 16, 1917, and then opened, for new roof and miscellaneous repairs, for laundry building, Bureau of Engraving and Printing, Washington, D. C., in accordance with the specification and drawings Nos. 100-B, 400-B, and 401-B, copies of which may be had at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 6, 1917.—Sealed proposals will be opened in this office at 3 P. M., April 18, 1917, for the construction of the United States post office at East Orange, N. J. Drawings and specifications may be obtained from the custodian of the site at East Orange, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 13

PHILADELPHIA
March 28, 1917

As The Editor Sees It

MAYOR SMITH'S suggestion of a Convention Hall for Philadelphia, to be constructed of steel and glass, if meant to be taken seriously as an expression of the executive views, should be vigorously opposed by architects, architectural societies and by art circles generally.

With its approval by Mayor Smith, last week, an ordinance became effective that should go far toward assuring the development of the Parkway along proper lines, as regards the appearance, size and use of the buildings that are to be erected on that avenue or in its immediate vicinity. Under the terms of this ordinance it is unlawful for any property owner to alter any building, erect any new structure, display any sign, notice or advertisement, without first obtaining the approval of the Art Jury, whose members are constituted the aesthetic guardians of the avenue.

East of Logan Square, along the line of the Parkway, which also includes the north side of Arch street from Broad street nearly to Eighteenth, no manufacturing establishment, garage or stable may be located. West of Logan Square the restriction is made more sweeping, banning all industrial or commercial properties as well. The billboard and the sky-sign, a feature of modern cities which are absolutely prohibited either on the avenue or on the street within two hundred feet where such signs might be visible from the avenue.

* * *

THE problem of devising the height regulations, which the ordinance prescribes, however, was much more difficult than defining what are held to be objectionable uses of Parkway properties. A uniform sky-line, different on the western portion of the avenue from the limit established on the

eastern end, would have been the most desirable regulation, in the opinion of many architects and planners. The limits established represent an attempt to compromise the views of the extremists with those of the more practical, although the diagonal cutting of the avenue, with its varying frontage widths on either side—a long frontage almost invariably opposing a short frontage—may at first produce some irregularity in building heights.

East of Logan Square one may now build to the height of three times the width of the frontage, but not exceeding two hundred feet, unless the upper floors are set back, under which circumstances the height may reach two hundred and forty-five feet, or twenty feet less than the present height of the Bell Telephone building at Seventeenth street. West of Logan Square the height limit is equal to the frontage, but not exceeding eighty feet, unless the upper floors are set back, in which case, between Twenty-third street and Fairmount Park, the limit is fixed at one hundred feet, and between Eighteenth and Twenty-third streets, at one hundred and sixty feet.

* * *

THE aim is to promote the consolidation of property holdings and erection of a few large buildings rather than many small ones. If individual lots are improved on the basis of the present lot sizes, however, there would be little uniformity, as in the case of the triangle formed by Arch Sixteenth street and the Parkway where the Bell Telephone Building would tower high alongside of a one-hundred-foot-high building its neighbor to the east being held down to seventy-five feet and the tip of the triangle toward the east occu-

pled possibly by a structure one hundred and fifty feet high.

Extending two hundred feet on either side of the Parkway the restriction will cover many properties on the north and south thoroughfares that intersect the avenue, as well as scores on other streets, such as Spring Garden, Callowhill, Vine, Race and Arch.

* * *

A FEW small shops, factories and business houses may ultimately be forced to remove, although discretionary power is placed in the hands of the Fairmount Park Commissioners to grant them temporary occupancy permits until the avenue is finished. What the law will do eventually, however, is to clear the avenue from all objectionable shops, to prevent it from being lined with gasoline stations and garages cigar shops and the heterogeneous collection of commercial activities on a small scale that frequently mar and retard the development of new thoroughfares.

The ordinance is the first of the kind to be applied in Philadelphia and it represents a well considered effort to recover the ground loss by the repeal of the two hundred feet excess condemnation act which was repealed as a result of the litigation over the erection of the Bell Telephone Building. Since then however there has been a change in both public thought and the law as regards the protection of highways which occupy an individual relationship to the entire city and that are more than mere thoroughfares. Zoning and height, use and occupancy restrictions have been meeting with increasing favor. It is not unlikely that some property owners affected by the ordinance may be inclined to question its terms and powers, but if it is enforced in the spirit in which

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.
125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MA 44 497

**BLUE
PRINTS**

it is drafted, it will go far toward developing and preserving the city's twenty-million dollar show street in the full sense of its name, as a spacious and beautiful park-way.

* * *

HOW, with the authority vested in it under this ordinance, the Art Jury can be expected to approve a structure "of glass and steel" for a place on the Parkway we are at some loss to imagine. Certainly the Mayor's views, if he is correctly quoted in these remarks, are at absolute variance with the spirit of the ordinance just signed by him. An Art Jury that in the present era of general enlightenment would approve a Convention Hall "of steel and glass" would be unworthy of its name and a

travesty on artistic intelligence. The new Convention Hall can be made quite as commodious as demands require without necessarily stripping its design of all vestige of architectural grace. We are totally out of sympathy with the view expressed by Mr. Duffield and others that "utility is the dominant consideration." The example that shall be set by the city in its own buildings upon the new Parkway, will determine to a great extent the character of that boulevard. If the city sets the example of cheap, box-like structures private owners may not be blamed for following suit and in the end that upon which millions of dollars were expended will become not a thing of beauty, but an eye-sore and a source of public humiliation.

EDITORIAL NOTES

Mill shipments of steel shapes are now being quoted at 3.569c. to 4.169c. for delivery in two to five months. The delivery problem is still one of the chief difficulties of the steel industry, and a return to normal transportation conditions will be of great benefit. The records of the Bridge Builders and Structural Society show that during the month of February, 1917, fifty-nine per cent. of the entire capacity of the bridge and structural shops of the country was contracted for.

* * *

Spencer Heating Co., Hartford, Conn., announces the removal of its Philadelphia branch to more spacious quarters in the Otis Building, at Sixteenth and Sansom streets. M. C. Gillette is manager.

* * *

Secretary of War Baker, in a decision made public regarding bridges over the Allegheny River at Pittsburgh, holds that the immediate elevation and relocation of the piers of the bridges is necessary in the national interest. The bridges are held to be unreasonable obstruction to navigation on the Allegheny River. The Secretary said their improvement should be undertaken in such a way as to inconvenience the people of Pittsburgh as little as possible.

* * *

N. & G. Taylor Co., Philadelphia, Pa., manufacturers of tin plate of all kinds, has been incorporated under the laws of Maryland as the N. & G. Taylor Co., Inc. The following officers have been elected: President, Hollinshead N. Taylor; vice-president, William W. Justice, Jr.; secretary-treasurer, L. Leslie Helmer. The company has been in business 107 years, always under control of the same family. The plant is located at Cumberland, Md., where extensions are now being made to increase the output.

* * *

Warren Webster & Co., Camden, N. J., announce the appointment of Eugene P. Bradley

and Thomas J. Hester as St. Louis district managers of the company. A branch office will be maintained in the name of Warren Webster & Co., at 1212 Chemical Building, St. Louis. The announcement contains views of some of the more important buildings in St. Louis equipped with the Webster vacuum system of steam heating, including the St. Louis Cathedral, Missouri Botanical Gardens, Missouri State Capitol, Hotel Statler and Railway Exchange Building.

* * *

Vapor-Vacuum Heating Co., Philadelphia, Pa., manufacturers of the Kriebel system of vapor-vacuum heating, announces that it is now located in its new home in the Otis Building, at Sixteenth and Sansom streets. This building is equipped with the Kriebel system, supplying 9,178 square feet of radiation.

* * *

A decision which, to a great extent, removed objections of employers against employing partially disabled men has just been announced by the State Workmen's Compensation Board in the case of John Klein against the Oliver Iron and Steel Company. Klein, who lost the sight of one eye several years ago, injured the other eye recently and became blind. The Board decided that Klein should receive compensation only for the loss of the second eye, and not for total disability. Heretofore, employers have hesitated to employ men with one eye, one leg or one arm, for fear that injury to such men would render the employers liable to compensation covering total disability.

* * *

Vapor Heating Co., Philadelphia, Pa., manufacturers of the Broomell system of vapor heating, announces that, owing to the great increase in its business and to facilitate the work of its service bureau, which is a feature of the Broomell system, the company has moved its general offices from Philadelphia to York, Pa. Under this new arrangement

the manufacture, shipping and accounting departments will be under the direct personal supervision of A. P. Broomell, president, and William H. Koller, secretary. This will leave the local offices free to devote their entire attention to the engineering and installation work, and to give attention to the calls on the service bureau. Charles E. Scott, for the past ten years manager of the company's New York office, has been appointed general manager of the company, with headquarters in New York. He will retain direct personal supervision over the New York office. Charles F. Mau has been appointed local manager of the New York office, and E. M. Barker, who has been connected with the company since its inception as chief engineer, has been appointed local manager of the Philadelphia office. J. J. McKenna and J. Glassey are associated with Mr. Barker in the Philadelphia office. R. W. Farmer remains as local manager of the Boston office. The company is at work on a new catalogue which will soon be ready.

Veto of the Eyre Senate bill permitting County Commissioners to let contracts for bridge work involving less than \$500 without advertising for bids was announced by Governor Brumbaugh. In vetoing the Eyre bill the Governor says the act it seeks to amend permits such work to be done without advertising only when it involves less than \$250, and comments:

"The trend of all modern accounting of public money and the expenditure of the same is unmistakably to a more detailed and more open treatment of public expenditures. The consensuses of opinion is to let the people know. When more than \$250 of county funds is to be expended it is well that competitive bids be received and the people given full knowledge of the transaction. This can work no injustice and do no harm. The absence of such public statement of the transaction might work harm. It is well to be on the safe side of the proposition. The law now works no hardship known to the executive. It is in harmony with the best principles of popular government."

* * *

Reports from New York City indicate that the builders of that city are not retreating before the high prices of labor and material. Plans filed for January and February show a volume of work larger than that of a year ago. The total estimated outlay is \$24,040,000, against \$22,495,000 in 1916.

* * *

The conditions in the cement market are very satisfactory, with a healthy demand and a promising outlook for new business. Portland cement prices are holding steadily at \$1.97 to \$2.07, but there is every possibility that these prices will be advanced at an early date. The freight congestion has been the most serious problem that the cement industry has had to contend with and has interfered greatly with the shipment of the product from the mills. The expected advance in the price of Portland cement will be directly traceable

to the increased cost of production. Fuel is scarce and high in price and is one of the most important factors in cement manufacture. The labor scarcity is another element of trouble and there is very little prospect that this condition will be adjusted for some time.

The principal problem that is now confronting the architectural and building fraternity is that of educating the investor and prospective builder up to a point of realization that high material prices are here to stay at least for some years, and that there is absolutely nothing to be gained by further holding off for a recession. Architects and builders who are in close touch with the manufacturers and jobbers in the structural material lines have learned the reasons for the present price levels, that they are not inflated and kept high by speculators endeavoring to crowd the market for the last cent, but are the result of excessively high manufacturing costs, augmented by the intolerable freight situation and labor difficulties.

There are prospects that the latter conditions will be improved during the next few months, but the manufacturing costs will continue to be high by virtue of the shortage of fuel and advanced prices of raw materials. The dissemination of this information to prospective builders becomes the part of the architect and the contractor. Their clients depend upon them largely for advice as to type of structure to be erected and the materials to be used in construction and there is every reason to suppose that they would become an important factor in influencing individuals and concerns contemplating the erection of new structures, but who are holding off pending a downward revision of commodity prices, to see the folly of further delay. The advantage is now with the builder who starts construction

at an early date, as the consensus of opinion is to the effect that there can be no reduction for a long time. The demand for space in both commercial and residential buildings is still in excess of the supply, and the investor that decides to begin operations along these lines, notwithstanding the present costs, will be able to command the best rentals and most favorable opportunities for disposing of improved properties to advantage.

Hercules Cement Corporation, of Philadelphia, Pa., with mill at Stockertown, Pa., has taken offices at 30 East Forty-second street, New York City, as headquarters for its sales department. E. B. Goode, Jr., for the last four years Metropolitan District sales manager for the Lehigh Portland Cement Company, has been appointed sales manager of the concern and will take up the duties of the office at once. Mr. Goode will immediately commence the work of organization and will be established April 1.

Benjamin F. Wood, who for sixteen years has been electrical engineer with the Pennsylvania Railroad, and for the past three years has served as vice-president and chief engineer of the United Gas and Electric Engineering Corporation, has opened an office in the Woolworth Building, New York, for general consulting practice. He has organized the B. F. Wood Engineers, Inc.

American Institute of Consulting Engineers, Inc., of New York, at its annual meeting elected the following members of the Council to fill the places of retiring members: A. M. Hunt, Lewis B. Stilwell, William J. Wilgus, Gardner S. Williams. The following officers were chosen for the coming year: George Gibbs, president; Lewis B. Stilwell, vice-president; F. A. Molitor, secretary and treasurer.

combine the desirability of a general contract plan and the plan of sub-letting every part of the work directly from the architect's office. Sub-letting directly from the architect's office is theoretically economical, as it eliminates the percentage of profit to the general contractor on these sub-estimates, but it must be borne in mind that the building business is a science in itself requiring long practice and experience, and few are the architects' offices so equipped as to perform this function advantageously.

Steps in the direction of sub-letting have been made for some time in segregating from the general contract many items, such as heating and ventilation, plumbing, electric wiring, elevators, etc., leaving the balance of the work to be cared for by a general contractor, and thus obtain that flux which is necessary to proper building procedure, but under this plan these parts segregated from the general contract and sub-let directly by the architect are usually the very works which the general contractor alleges are the causes of all delays and difficulties which may arise in his own work.

The question is, why should not the general contractor sub-let everything on a competitive basis and not personally enter the field for any part of the trade, such as mason work or carpenter work in connection with the entire work which is to be entrusted to his supervision? If the general contractor sub-lets every portion of the work he should be raised to a purely professional sphere and would not have to hold the double function of a purely professional service and a commercial one as being a direct contractor for any part of the entire work.—"New Jersey State Journal of Architecture."

SOME PHASES OF GENERAL CONTRACTING.

By Stockton B. Colt.

General contractors submitting estimates for the entire work of erecting a building obtain competitive estimates on the various parts of the work from various sub-contractors, either preferred or approved as the case may be, the aggregate of which sub-estimates, together with certain other estimates furnished by the general contractor, plus the total profits to the general contractor, forms the general contractor's estimate for the entire work. It appears very often that general contractors are also masons and carpenters, or both; accordingly, they do not obtain competitive estimates on these items of the work. For example, the schedule of charges usually required by the architect from the general contractor upon the signing of the contract sets forth the various parts of the work sub-contracted for and their prices plus their commission to the general contractor. The amount

of the work sublet is in the neighborhood of say 70 per cent. of the entire work, and the balance, or 30 per cent., is that part of the work furnished direct by the general contractors without competition.

If it is desirable to engage a general contractor to supervise the entire work and see to the proper building sequence of the various trades so that all work shall fit and agree and be carried forward harmoniously, efficiently and with dispatch, then why not have him in a professional capacity of supervisor only, with adequate remuneration for his valuable services as such, and have competitive estimates on all the items entering into the make-up of the building, including the mason work, carpenter work, and the like? Each sub-contract could be made directly between the sub-contractor and the owner, the requisitions for payment on the various subcontracts might come through the general contractor in the form of a certificate, which to become valid for payment, would have to be countersigned by the architect. Such a plan might

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Garage, Kitchens lane, Germantown. Architects, Bunting & Shrigley, 603 Chestnut st., Philadelphia. Owner, Chas. F. Jenkins, Seventh and Washington Square, Philadelphia. Stone, 1½ stories, 28x44 feet, shingle roof, hot water heating, electric lighting, cement floors (electric work reserved). Architects taking revised bids, due April 24. Wm. C. Wright, 22 Harvey street, Germantown, and W. John Stevens, Inc., Wyncote, Pa., are figuring.

Hospital, Tulip street and Allegheny avenue, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Northeastern Hospital of Phila., 2350 E. Allegheny avenue. Brick and reinforced concrete, stone trimmings, 2 stories, 101x41 feet, and 1 story, 31x31 feet, slag roof, terrazzo, cement and pine floors, metal lath, rolled steel sash, hollow tile, metal skylights, fire doors and tin clad and kalamein doors, tile and marble work (heating, electric work and (1) elevator reserved). Architects have received bids.

Ice House (add.), Seventeenth and Junata streets, Philadelphia. Architect, private plans. Owners, American Ice Co., Sixth and Arch streets, Philadelphia. Brick and concrete, 2 stories, 16x48 feet, slag roof, cement, wood and slate floors. Owners have received bids.

Residences (9), north side of Luzerne street, between Ninth and Tenth streets. Architect, Private plans. Owner, Francis B. J. Brangan, 4031 North Ninth street. Brick, 2 stories, 15x36 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Owners ready for sub-bids.

Garage, Wynnewood road, Overbrook, Pa. Architect, P. M. Colon, 3133 W. Norris street, Philadelphia. Owner, Walter R. Sparks, Merion, Pa. Hollow tile and plaster, 1 story, 16x18 feet, asbestos shingle roof, cement floors, electric lighting. Plans completed. Owner ready for bids.

Residence (alt. and add.) and Garage, southwest corner Forty-eighth and Chester avenue. Architects, Mills & Van Kirk, Harrison Building, Philadelphia. Owner, name withheld. Stone, residence, 1 story addition, 16x14 feet; garage, 2 stories, 20x26 feet, slate roof, steam heating, electric lighting, tile work, hardwood and cement floors, vented drains (gasoline storage system reserved). Plans in progress. Architects ready for bids in one week.

Garage, 1530-32 North Twenty-seventh st., Philadelphia. Architect, private plans. Owner, name withheld. Brick, steel and terra cotta, 1 story, 36x76 feet, slag roof, cement floors (plumbing, heating, electric work and gasoline storage system reserved), hollow metal skylights. Owners have received bids.

Garage, Broad street and Oak Lane avenue, Oak Lane, Philadelphia. Architect, C. E. Schermerhorn, 430 Walnut street, Philadelphia. Owner, Reuben Windisch, on premises. Frame and shingle, 1½ stories, 22x30 feet,

shingle roof, cement floors, gas heating, electric lighting, gasoline storage system. Architect has received bids.

Stores and Residences (4), Sixtieth and Larchwood avenue, Philadelphia. Architect, H. E. De Hoff, 48 South Sixtieth street, Philadelphia. Owner, Henry Gelb, 442 South Sixtieth street, Philadelphia. Brick, (1) 3 stories and (3) 2 stories, 16x20x50 feet, slag roof, hot water heating, electric lighting, tile work, metal bulks. Owner is ready for sub-bids.

Apartment House, 3210-16 Green street, Philadelphia. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owner, name withheld. Stone, brick, steel and terra cotta. Plans in progress. Too early for details.

Residence, Forty-seventh and Wyalusing Philadelphia. Architect, Jas. C. Fernald, 5533 Wyalusing avenue, Philadelphia. Owner, Joseph A. Barkley, 453 Parrish street, Philadelphia. Brick, 2 stories, 116x42 feet, slag roof, pine floors, hot water heating, electric lighting. Owner has received bids.

Stores (3) and Garage Building, 1929-35 N. Franklin street, Philadelphia. Architect, Frederick T. Uozzell, 147 North Third street, Philadelphia. Owner, Dr. C. J. Schneider, 1930 N. Seventh street, Philadelphia. Brick and Stone, 2 stories, 110x65 feet, slag roof, (steam heating, electric lighting and plumbing reserved), metal skylights, ventilators, metal store fronts, rolling steel doors, gasoline storage system, air pump. Architect taking bids, due April 5th at 3 P. M. Harry Brocklehurst, 512 W. Norris street; Harry Gill, Jr., 2515 Germantown avenue; John R. Wiggins & Co., Otis Building; James H. Wells, Otis Building; Alex. Chambley, 243 South Tenth street, and A. R. Raff Const. Co., 1635 Thompson street, Philadelphia, are figuring.

Warehouse, 12 South Sixth street, Philadelphia. Architects, E. P. Drang & Son, 1230 Locust street, Philadelphia. Owners, Megargee-Hare Paper Co., on premises. Brick, 6 stories, 40x72 feet, slag roof (heating, plumbing and lighting reserved), cement floors, hollow tile, rolled steel sash and skylights, fire and kalamein doors, fire escapes, ornamental iron work (elevator reserved). Architects have received bids.

Residence (alt. and add.), 908 South Fifth street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Dr. A. Cohen, on premises. Brick, 2 stories, general interior alterations, hot air heating, hardwood floors, slag roof, cement work, modern plumbing, leaded glass. Owner will take bids in one week.

Saloon and Hotel (alt. and add.), 116 South Fifteenth street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owner, Margaret A. Kernan, northeast corner Fifteenth and Filbert streets. Brick, 2 stories, 18x62 feet, slag roof, pine and cement floors (plumbing, steam heating,

electric work reserved), tile and marble work, metal lath. Plans completed. Architect ready for bids.

Stores and Dwellings (2), Fitzwater and Marshall streets, Philadelphia. Architects, Milligan & Pierson, 520 Walnut street, Philadelphia. Owner, C. L. Villotti, 633 Fitzwater street, Philadelphia. Brick, 2 stories, 20x62 feet, slag roof, hot water heating, electric lighting, tile work. Plans completed. Architect ready for bids in a few days.

Residences (23), Crewson street, below Chew street, Germantown. Architect, private plans. Owner, Geo. W. Carson, Locust avenue, below Chew street, Germantown. Brick, 2 stories, 16x40 feet, slag roof, hot water heating, combination lighting, hardwood floors, tile work. Owner taking sub-bids.

Factory, 1021-25 South Ninth street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner, Luigi Verna, on premises. Brick and steel, 3 stories and basement, 32x57 feet and 40x48 feet, slag roof, steam heating, electric lighting, metal lath, dampproofing, fire doors, maple floors, metal skylights. Owners taking bids, due April 1st. (Note extension.) Edw. Fay & Son, 2 S. Mole street, and M. Gittalo, 834 Dickinson street, are figuring, in addition to those previously reported.

Bridges (4), Philadelphia. Engineer, Jonathan Jones, room 532, City Hall, Philadelphia. Owners, City of Philadelphia, Dept. of Public Works, Geo. E. Datesman, director, City Hall, Philadelphia. Steel, reinforced concrete, timber, asphalt paving. Low bidders: Fifth street, over Richmond Branch of P. & R., Monaghan & Lossee, Inc., 3016 Chestnut street, \$21,500; Ashburner street, over Phila. & Trenton RR., John McMenamy, 512 Walnut street, \$136,857; Linden avenue, over Phila. & Trenton RR., John McMenamy, 512 Walnut street, \$105,499; Harvey street, under P. & R. N. Branch of P. & R., no bids.

Factory, Twelfth and Buttonwood and Hamilton streets, Philadelphia. Architect, Herman Miller, Crozer Building, Philadelphia. Owners, E. Weber & Co., 1125 Chestnut street, Philadelphia. Brick (slow burning), 5 stories and basement, 42x150 feet, slag roof, steam heating, electric lighting, maple and cement floors, hollow metal sash, fire doors and kalamein doors, hollow metal skylights, hollow tile, metal lath, (1) elevator, safety trends, metal window guards, waterproofing. Plans about completed. Architect ready for sub-bids April 24.

Bakery (alt. and add.), 510 Bainbridge st. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owners, Caplan & Sayer, 517 Bainbridge street, Philadelphia. Brick, 3 stories, 16x78 feet, slag roof, hot water heating, electric lighting, pine floors. Plans completed. Owners will take bids.

Drexel Building, Philadelphia. Owner, Rev. Victor Strumia, 929 Greenwich street, Philadelphia. Stone and brick, 2½ stories, 22x45 feet (heating reserved), slag roof, electric lighting, piers floors. Plans in progress. Architect ready for bids in a week.

Passenger Station (alt. and add.), Cheltenham, Philadelphia, \$35,000. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Penna. RR. Co., Broad Street Station, Philadelphia. Consists of new concrete platforms, steel and timber shelter sheds, slate roofs, stairways and elevator lift. Owners have received bids.

Shop and Studio (alt.), 1524 Locust street, Philadelphia, \$5,000. Architect, C. Wharton Churchman, 1525 Locust street, Philadelphia. Owner, Leroy Hemingway, 1615 Walnut street, Philadelphia. Brick, 3 stories, consists of interior alterations (plumbing, heating, electric work and decorating reserved), hardwood floors, tile and marble work, metal lath. Plans about completed. Architect ready for bids in a few days.

Residences (23), Sixty-second and Osage avenue, Philadelphia. Architect, J. Elvin Jackson, 727 Walnut street, Philadelphia. Owners, Bobb & Sosnow, 720 North Seventh street, Philadelphia. Brick, 2 stories, 15x42 feet, slag roof, hot water heating, hardwood floors, electric lighting, tapestry bricks, tile work. Owners taking sub-bids.

Store (alt.), 1019 Chestnut street, Philadelphia. Architect, Richard C. Loos, 1017 Chestnut street, Philadelphia. Owner, name withheld. Consists of interior alteration to first floor, plumbing, electric lighting, parquet and composition floors, cabinet work, decorating. Plans about completed. Architect will take sub-bids in a few days.

Store and Dwelling, 308 South Fifth street, Philadelphia, \$7,000. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owners, Mogul & Woldow, 329 South Fifth street, Philadelphia. Brick, 3 stories, 18x70 feet, slag roof, hot water heating, electric lighting, tile work, pine floors. Plans about completed. Owners will take sub-bids.

Garage and Manufacturing Building, Bridgesburg, Philadelphia. Architect, Harry Zimmerman, 4957 Hawthorne street, Frankford. Owners, Charles Lennig & Co., Inc., 112 South Front street, Philadelphia. Brick, hollow tile and plaster, 1 story, 65x35 feet and 60x200 feet (heating, electric work, plumbing and gasoline storage system reserved), slag roof, cement floors, metal lath, rolled steel sash and hollow metal windows. Architect taking bids. Due March 30th. Henry P. Schneider, 3713 Old York road; Rush Bros., 1104 Arrott street, Frankford, and F. A. Havens & Co., 845 North Nineteenth street, are figuring.

Storage Building, 1811-13 South Front st., Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, A. Kavalsky & Son, on premises. Brick, 2 stories, 32x96 feet, slag roof, electric lighting, yellow pine floors, 1 elevator. Plans in progress.

Residences (60), Tenth and Courtland sts., Philadelphia. Architect, private plans. Owner, Frank D. Williams, 3532 North Bouvier street, Philadelphia. Brick, 2 stories, (15) 16x50 feet and (45) 16x40 feet, slag roof, hot water heating, combination lighting, tile work, hardwood floors. Owner ready for sub-bids.

Residences (41), Chester avenue, between Sixtieth and Sixty-first streets. Architect, Frank V. Greenstein, Empire Building, Philadelphia. Owner, James Egan, 4146 Leidy avenue, Philadelphia. Brick, 2 stories, 16x57 feet, slag roof, hot water heating, electric lighting, tile work, hardwood floors. Architect taking sub-bids.

Store and Residence, 3621 Woodland avenue, Philadelphia. Architect, private plans. Owners, Edward P. Dolbey & Co., 3613 Woodland avenue, Philadelphia. Brick, 3 stories, 18x68 feet, slag roof, oak and maple floors, hot water heating, electric lighting, elevators, damp-proofing and wire work. Owners taking bids, due March 31st. Wm. R. Dougherty, 1610 Sansom street, and F. B. Wallace, 1220 Chancellor street, are figuring.

Construction and Repairs, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Public Works, Bureau of Surveys, George E. Datesman, Director, Room 534 City Hall, Philadelphia. Consists of reinforced concrete grit chambers with inlet and outlet sewers, machinery and equipment, electric wiring and fixtures, plumbing, heating and ventilating. Owners taking bids, due April 10th at noon.

Dormitory Buildings (2), Refectory and Boiler House, Byberry, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Department of Health and Charities, Dr. Wilmer Krusen, Director, Room 584, City Hall, Philadelphia. Brick, steel and hollow tile, stone and terra cotta trim, 2 stories and basement, 200x28 feet and 37x43 feet; refectionary building, 1 story and basement, 109x44 feet, 37x62 feet and 2 wings 35x13 feet and 1 story, 43x36 feet, 34x18 feet and 15x17 feet, slate and slag roofs, asphalt, cement and pine floors, metal lath, waterproofing and damp-proofing, hollow metal doors, safety treads, metal window guards, 1 elevator, metal lockers, metal weather strips, enameled brick, terrazzo work (plumbing, steam heating and elec-

tric work separate bids). Lowest bidders, Charles McCaul Co., 1713 Sansom street, \$332,846; H. E. Baton, Twelfth and Sansom sts., \$347,000.

Turntable, Tulip and Emerald streets, Philadelphia. Engineer, Samuel T. Wagner, Reading Terminal, Philadelphia. Owners, Philadelphia and Reading Railroad Co., Reading Terminal, Philadelphia. Reinforced concrete and steel, consists of 100-foot turntable. Low bidders, James McGraw Co., Commercial Trust Building, substructure; American Bridge Co., Widener Building, superstructure.

Loft Building, southwest corner of Broad and Brown streets, Philadelphia. Architect, Le Roy B. Rothschild, Bulletin Building, Philadelphia. Owners, R. A. Heymann & Bro., Widener Building, Philadelphia. Reinforced concrete, brick and stone, 5 stories, 40x100 feet, slag roof (plumbing, steam heating, electric work, 1 elevator reserved), cement and tile floors, tile and marble work, metal lath, roof ventilators. Plans in progress. Architect will take bids in two weeks.

Garage, Fifth street, north of Fisher's avenue, Philadelphia. Architect, private plans. Owner, Mrs. Dora Mulligan, 157 South Texas avenue, Atlantic City, N. J. Brick, steel or concrete, 1 story, 75x150 feet, slag roof, steam heating, electric lighting, cement floors, gasoline storage system. Owner ready for bids.

Machine and Electrical Shop, League Island, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Washington, D. C. Reinforced concrete, hollow tile and steel, 4 stories, 130x325 feet or 130x675 feet, slag roof, pine floors, rolled steel sash, fire doors (plumbing, heating, electric work separate bids), rolling steel shutters. Owners taking bids, due April 2nd (note correction). Warren Moore & Co., Commercial Trust Building; F. W. Mark Const. Co., Finance Building; H. H. Wehneyer, 1004 Lehigh avenue; Thomas Reilly, 1616 Thompson street, Philadelphia, are figuring, in addition to those previously reported.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

Garage, 335 Durham street, \$2,000. E. B. Nickson (O), 7219 Bryan street, \$2,000. L. D. Stites (C), 126 Herman street. Brick, 1 story, 45x22 feet, rear 22x27 feet, slag roof.

Garage, Durham street, south of Germantown avenue, \$1,000. E. B. Nickson (O), 7219 Bryan street. L. D. Stites (C), 127 Herman street. Brick, 1 story, 13x26 feet, slag roof.

Offices, Wheatstap lane, \$6,750. Penna. Railroad (O), Broad Street Station. L. H. Smith (C), Hale Building. Brick, 2 stories, 15x53 feet, slag roof, steam heating.

Offices, 1124 Vine street, \$10,000. Russell & Ball (O), 1120 Vine street. Standard Const. Co. (C), 1713 Sansom street. Brick, 1 story, 17x95 feet.

Garage, 345-47 Orrainna street, \$9,900. E. S. Armstrong (O), 130 South Twelfth street. Connen Const. Co. (C), 1737 Fibbert street. Brick, 1 story, 92x117 feet, slag roof.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 17, 1917.—Sealed proposals will be received at this office until 3 P. M. April 16, 1917, and then opened, for new roof and miscellaneous repairs, for laundry building, Bureau of Engraving and Printing, Washington, D. C., in accordance with the specification and drawings Nos. 100-B, 400-B, and 401-B, copies of which may be had at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, March 22, 1917.—Sealed proposals will be opened in this office at 3 P. M. on April 27, 1917, for the construction, complete, of the steerage barracks for the United States quarantine station at Portland, Me. Drawings and specifications may be obtained from the custodian at the quarantine station or at this office, in the discretion of the Acting Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LUMBER YARDS

Third and Girard Avenue, Philadelphia

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through slots clamped to the sides of the posts.

Iron Railings and Entrance Gates, Lawn Fences, Tennis-Court, Poultry and Kennel-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

Per Gallon, \$3.00

Wire Talks

¶ To get anything worth while in this world you have to pay for it. Cheap Wire means cheap morals. It means cheap service. It means a letting-down of responsibility. It means ultimate failure to do the work to be demanded of it. "Good praying," an old adage, "deserves good paying." Good Wire has its price and is worth what you are asked to pay for it.

¶ Incidentally it is cheapest in the end.

¶ Let us demonstrate.

AUDUBON WIRE CLOTH CO., Inc.

Audubon, N. J.

Consider the durability of "F-S" Products.

For good, consistent, permanent jobs specify "F-S" Mission Finishes. There is never danger of their setting or lapping while brushing out. They have no unpleasant odor. They come in various permanent colors.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural

VOLUME XXXII

Number 14

Engineering and the Building Trades

PHILADELPHIA

April 4, 1917

As The Editor Sees It

THE suggestion, in a recent number of THE GUIDE, that an organized effort be made to arouse the interest of pupils in the public schools to the importance of good architecture, met with the usual apathetic indifference. "What is everybody's business is nobody's business." And so it happens that the drawings and accessories, shown at the recent architectural exhibition, will not be exhibited in the schools, but will be dispersed after the usual fashion, letting pass an opportunity such as will not again present itself until the next annual exhibition, a year hence.

This popularizing of the arts by way of the public schools is engaging the attention of education in other cities. In New York particularly immense strides are being made in the education of the popular taste along the lines of the higher ideals. In addition to the Municipal Art Society mentioned in a recent paragraph there is, in New York City, an active interest on the part of the Board of Education in spreading intelligent ideas upon the subject of the art.

* * *

DR. JAMES P. HANEY, director of art, makes the suggestion in his annual report that educators generally take an active interest in the decorating of school buildings.

The report has just been published by the Board of Education, with an extended statement of what the art department in the high schools has done for the city's children during the last year.

Doctor Haney asks the Board of Education to establish a committee on art to further the development of industrial art training along a variety of lines. In advocating this the director says: "The industrial growth of the country clearly points to the increasing importance of the role played by art in industry. As compared with foreign countries, we are

behind in the conservation of our esthetic resources. In a city of the vast interests which New York represents, special attention should be given to this important subject. This can best be effected in the Board of Education by a special committee which shall seek to foster the arts, fine and applied, by the direction and guidance of all agencies making for their development."

The report tells, with the aid of many illustrations, what the art department has done along the lines of specialized teaching for pupils of varied talents. The development of special courses in interior decoration, commercial design, art history and technical drawing is explained at length, and a summary is given of the work of the School Art League, which last year reached more than 40,000 teachers and children in its lectures and museum visits. To bring art in close touch with the trades, the director also arranged last year to have more than 1,000 firms visited by teachers especially assigned to make an industrial art survey. The results of this survey served to bring art manufacturers and the schools into closer touch and to inform the art teachers of the conditions for which their students must be prepared.

* * *

TO evidence the practical attitude of the department in regard to the problems which it has to face, Doctor Haney makes a summary of just what the department seeks to do. The statements are ten in number.

First. To train "the many" in the power of esthetic appreciation. To send them out of the schools "esthetically alive" to their surroundings. To aid thus in the creation of an art-loving public.

Second. To train "the few" to a high

order of technical ability as draughtsmen and industrial designers. To sift out these talented pupils early and cause them to specialize in the direction of their talents.

Third. To differentiate the work of the department to meet the needs of each high school, and further, to differentiate the courses within each school that the needs and capacities of different types of students may be specifically met.

Fourth. To secure the co-operation of all teaching agencies in forwarding the aims of the department, these to include museums, art societies, civic and merchant associations, loan exhibitions, docent service, systematic study in organized courses and visits to other schools by teachers' conferences, etc.

Fifth. To make the work of the art department of the high schools touch the life of the school, at many angles through loan exhibitions, assistance with plays and pageants, artistic supervision of bulletin boards, preparation of posters, assembly art talks, etc.

Sixth. To cause pupils to realize that there is a "cash value" in industrial art education; i. e., that it is profitable to the talented student to cultivate that talent along industrial art lines.

Seventh. To show public-spirited employers that the development of native talent in the industrial arts is an economic necessity on the part of the State, and that this development cannot take place unless they aid.

Eighth. To develop an Industrial Art School with a variety of day and evening courses designed to fit workers for the highly specialized work of the more important art trades. To offer in this school an opportunity for the completion of the special training begun in the individual high schools.

Ninth. Until a free city Industrial Art School is organized to provide at least one scholarship in industrial art each term in each high school. This scholarship should offer one year of free post-graduate instruction.

Tenth. To secure well-decorated school buildings through the purchase of appropriate pictures, and the bringing together of artists and school authorities to the end that mural paintings may be especially designed and installed in the schools.

HERE is a work eminently worth doing—the opening-up to young and impressionable minds of the great, underlying principles of taste. Let those who rail at the failure of the masses to appreciate the beautiful and the good in art do something to educate the public intelligence.

NEARLY 20,000 union workmen, members of the Building Trades Council, are idle in Cleveland as a result of difference between that body and the Building Trades Employers' Association, due, it is charged, to sharp practice and repudiation of agreements on the part of the union element. The conditions in Cleveland are alleged to have been such as to subject the employer to all sorts of petty and burdensome impositions at the hands of business agents, walking delegates and the other recognized impedimenta of organized labor. It is against these conditions, rather than any serious disagreement as to wage scales, that the Employers' Association is in revolt. Union leaders claim that small operative work is keeping the bulk of their men occupied, but unbiased reports aver that thousands are idle.

commodious quarters at Ninth and Tioga streets, Philadelphia.

The architectural firm of Bissell & Sinkler has removed its offices to the Otis Building, Sixteenth and Sansom streets, Philadelphia.

The Ohio State Association of Architects at its recent annual meeting at Toledo named the following committee chairmen: City Plan, J. W. Thomas, Jr., Howell & Thomas, architects, Columbus and Cleveland; Education, William Warren Sabin, Cleveland; State Building Code, George R. F. Rhines, Toledo. The City Plan Committee will co-operate with Governor Cox, the National Government, the city of Columbus and Franklin County in a civic center development in Columbus along the lines of and following the lead of the Cleveland group plan. Officers of the State Association elected were: President, Lawrence S. Bellman, Toledo; vice-president, Harry I. Schenck, Dayton; secretary-treasurer, Herbert B. Briggs, Cleveland.

EDITORIAL NOTES

Paint manufacturers, dealers in paints and painters' supplies report considerable increase in this line of business during the present month, says R. G. Dun & Co. weekly trade review. Purchases are in larger quantities and represent all grades of material. There appears to be considerable activity in the painting line. Large contracts are being received, and it is believed that the volume of business done so far during the present month will exceed that for 1916.

The Sutton & Corson Company, Ocean City, is the lowest bidder for the contract for the erection of a huge re-enforced concrete sea wall to protect permanently the sea front of Longport, which Longport Commissioners expect to award next Saturday. The Ocean City company bid \$350,000, with two years for the completion of the work. Longport has disposed of bonds to provide funds and is ready to go ahead.

Milwaukee Home and Real Estate Show will be held April 9-15, 1917, at the Milwaukee Auditorium. The show is being conducted by the Milwaukee Real Estate Association and is the first one of its kind to be held by this association. It is designed as "an exposition of the highest art of home building and planning," and will include exhibits of heating and ventilating apparatus for the home.

Business is brisk in the hardware line. The trade activity so far this month is reported in the trade to be considerably greater than during the similar periods last month. Purchases are being made in larger quantities and order slips indicate that the present brisk pace will continue throughout the month.

Prices are firm in all lines and collections are said to be good.

"The huge resources we represent and the mechanics we have in our membership," writes Secretary Charles Elmer Smith, of the Philadelphia Master Builders' Exchange, "must be considered in the event of war or in any preparedness idea. The building trades are the groundwork of all that the United States could do. The Master Builders' Exchange has officially pledged its loyalty to the United States, but tangible plans as how it can serve the Government best will be formulated at a meeting of the Board of Directors on April 10. There isn't one contractor, sub-contractor or building material man but will turn over all his plant facilities and all his technical knowledge of construction to the manufacture of building materials, the erection of munition factories, or anything that is in any way connected with the building industry. The 700 members of the Exchange and the thousands of employees will gladly serve their country."

Judges Martin and Monaghan refused to grant an injunction sought by J. Joseph McHugh, a contractor, to prevent Director of Public Works Datesman from placing him on the "blacklist" of the department for failing to carry out five contracts for sewer construction. Assistant City Solicitor Lowengrund charged that McHugh "tried to turn a sharp corner on the city" by rejecting several contracts he did not care to fulfill. "He wanted to be placed on a pedestal, so he could select which contracts he would perform," Lowengrund concluded.

P. N. Reuter & Co., cement paving contractors, announce their removal to new and more

The new building code of Dayton, Ohio, which was passed by the City Commission the latter part of December, 1916, went into effect on March 1st. This code is the result of labors of a great many men in different occupations both in this and other cities of the State. The need of a building code for Dayton has been felt for a number of years, and while a number of attempts have been made by different organizations to compile such a code, nothing definite was accomplished until the Building Code Committee was appointed by the Greater Dayton Association in 1913.

The American Hardware Manufacturers' Association and the Southern Hardware Jobbers' Association will hold their convention at the Rice Hotel, Houston, Texas, April 17-20. F. D. Mitchell, 233 Broadway, New York, is secretary-treasurer.

J. R. Wemlinger, president of the Wemlinger Steel Piling Company, has been appointed First Lieutenant in the Engineer Officers' Reserve Corps of the United States Army. Mr. Wemlinger is secretary of the American Society of Engineering Contractors.

The National Metal Trades' Association will hold its convention at the Hotel Astor, New York City, April 25 and 26.

The National Fire Protection Association will hold its annual meeting in Washington, D. C., May 8-10, 1917.

Glass Brick Company, New York, office at 103 Park avenue, Manhattan, announces the completion of its new and enlarged plant at Hutington, West Virginia. Edward Ferger is the New York district manager.

Perth Amboy, or South Amboy, just across the river from Perth Amboy, is supposed to have been the place where New Jersey's pottery industry had its origin more than a cen-

tury and a half ago. Now the locality has three potteries, whose output brings Middlesex County up to second in the State. Mercer County, in which Trenton is located, is first. Other burned clay materials constitute a larger portion of the output in and about Perth Amboy now. Architectural terra cotta and fireproofing are very important. The men engaged in these enterprises are live wires and allow nothing to be left undone which will improve their industry.

* * *

The National Pipe and Supplies Association will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

QUANTITY SYSTEM FOR BUILDING CONTRACTS.

"In the preparatory work of letting equitable building contracts, and in American contracting methods generally, but few persons of experience will contend that our methods are at all comparable with those used abroad," says the "American Architect." "They possess, in fact, many defects that have been eliminated in other countries where the tendency to take chances is less pronounced than here.

"One plan quite generally followed abroad—the quantity system—has been subjected to the test of actual use for many years, and most of us who have taken the time to study its elements find much to recommend its adaptation to American building practice and ultimate general adoption in this country. It is our misfortune, however, that with the exception of a comparatively few architects and contractors, who had experience of the quantity system before they came to us, our own people really know little or nothing about better or more modern methods than those they now practice, and consequently are content to follow lines of least resistance.

"The result is that we are slow to progress in estimating methods. Nevertheless, in a number of instances the larger contracting concerns of this country are beginning to appreciate the thorough training the properly qualified quantity surveyor receives abroad, and have employed such surveyors as estimators for their firms. These are the men who, having adapted themselves to American methods and ideas, will above all others make the best quantity surveyors for this country.

"Perhaps the greatest handicap any radical departure in building methods has to contend with is the 'new arrival' in the field, who, like an architectural jack-in-the-box, usually pops up wherever he sees or imagines he sees, a chance to profit from the needs or tendencies of the architectural or building fraternity. The type is analogous to the pirates met with in commercial life whose purpose seems to be to prosper at the expense of the initiative and experience of others. The history of the quantity system in this country will probably offer no exception. It is highly desirable that we should have all the light and all the information we can get, whether in favor of or

against this system, but it is no less desirable that it comes from competent persons.

"The profession should not be misled by any whose training, education or experience does not qualify them to speak with authority regarding this subject which, thanks to many years of persistent effort, has now become a live question which the builders, architects and engineers of this country must consider. Builders are unquestionably becoming weary of figuring plans and giving architects and owners free tenders for buildings which may or may not ever be built, depending perhaps upon the owner's caprice or the size of his bank account concerning which even perfect specifications are necessarily silent. Moreover, the contractor's grievance presents but one phase of the matter which is now demanding attention in the interest of all concerned."

TABLE OF MEASUREMENTS.

7.92 inches make 1 link.
25 links make 1 rod.
16.50 feet make 1 rod.
4 rods make 1 chain.
10 chains make 1 furlong.
8 furlongs make 1 mile.
320 rods make 1 mile.
5,280 feet make 1 mile.
10 square chains make 1 acre.
160 square rods make 1 acre.
640 acres make 1 square mile.
43,560 square feet make 1 acre.
69 geographical miles make 1 degree.
1,728 cubic inches make 1 cubic foot.
27 cubic feet make 1 cubic yard.
Gunter's chain, 22 yards of 100 links.
A section is 640 acres.
A township is 36 sections, each 1 square mile.
A span is 9 inches.
A hand—horse measurement—is 4 inches.
A knot—nautical—is 6,086 feet.
A fathom—nautical—is 6 feet.
A stone is 14 pounds.
A square acre is 208 7-10 feet on each side.

Contents of Fields and Lots.

220x198	feet of land equals 1 acre.
440x 99	feet of land equals 1 acre.
110x396	feet of land equals 1 acre.
60x726	feet of land equals 1 acre.
120x363	feet of land equals 1 acre.
240x181½	feet of land equals 1 acre.
200x108 9-10	feet of land equals ½ acre.
100x145 2-10	feet of land equals ½ acre.

There are 12 city lots, 25x100 feet, in an acre with the streets cut through; 17 424-1000 city lots, 25x100 feet, in an acre without the streets cut through.

Square Measure.

Surface or Square Measure—144 square inches equal 1 square foot; 9 square feet, 1 square yard; 30¼ square yards, 1 measure; 20 feet on each side and you have about a square rod; 41 square rods, 1 square rood; 4 square roods, 1 acre; 640 acres, 1 square mile; 4,840 square yards, 1 lacre.

PAINTING.

The following table shows the number of superficial yards 1 gallon will cover:

	Yards.
Priming color	50
White zinc	50
White paint	44
Lead color	50
Black paint	50
Stone color	44
Yellow paint	44
Blue color	45
Green paint	45
Bright emerald green	25
Bronze green	45

One pound of paint will cover about four superficial yards the first coat, and about six yards each additional coat.

Statement of the Ownership, Management, Circulation, etc.

Statement of the ownership, management, circulation, etc., of The Builders' Guide, published weekly at Philadelphia, Pa., required by the Act of August 24, 1912, for April 1, 1917.

Editor, J. Irving Dillon, 5716 Christian street Philadelphia.

Managing Editor, none.

Business Manager, none.

Publishers, Building News Publishing Co., Ferry Building, Philadelphia.

Owners, Louis S. DeLone, 6419 Drexel road, Philadelphia; Samuel R. McDowell, Narberth, Pa.

Known bondholders, mortgages and other security holders holding one per cent. or more of total amount of bonds, mortgages or other securities, none.

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Garage, Sixty-fifth and Haverford avenue, Philadelphia. Architect, Ralph H. Hothersall, 1431 Jerome street, Philadelphia. Owner, Mrs. Dora Mulligan, 157 South Texas avenue, Atlantic City, N. J. Brick, 1 story, 90x145 feet, slag roof, steam heating, electric lighting, cement floors, roof ventilators (gasoline storage system reserved). Plans in progress. Architect will take bids in about two weeks.

Apartment (alt. and add.), 719-21 Spruce street, Philadelphia. Architect, private plans. Owner, Frederick L. Shissler, 263 South Eighth street, Philadelphia. Brick and stone, 4 stories, 37x100 feet. Plans in progress. Owner will take bids in a few days.

Hall Building, Trenton, N. J. Architect, Ralph E. White, Pennsylvania Building, Philadelphia. Owner's name withheld. Brick, stone, steel and terra cotta, 2 stories, 90x90 feet. Plans in progress.

Post Office, State and Jackson streets, Media, Pa. Architect, James A. Wetmore, Treasury Department, Washington, D. C. Owners, U. S. Government, Treasury Department, Washington, D. C. Brick, stone and hollow tile, 2 stories, composition roof, pine, cement and terrazzo floors, metal lath, waterproofing and dampproofing, roof ventilators, safety treads, tile and marble work (plumbing, heating, electric work and ventilating separate bids). Revised plans completed. Owners will be ready for bids in a few days. Bids due May 8th at 3 P. M.

Warehouse, 3120-24 Market street, Philadelphia. Architects, Love & Hunt, 277 South Eleventh street, Philadelphia. Owners, George & Borst, 277 South Eleventh street, Philadelphia. Brick, terra cotta, reinforced concrete and steel, 7 stories, 50x220 feet, slag roof, steam heating, electric lighting, marble and terrazzo work, rolled steel and hollow metal sash, rolled steel skylights, fire and kalamein doors, oak, pine and cement floors, hollow tile, metal lath, elevators, waterproofing, gasoline storage, wire work, iron stairs (sprinkler system reserved). Owners have received sub-bids.

Factory, Tioga, Amber and Venango streets and P. R. R., Philadelphia. Architects, Balingier & Perrot, Seventeenth and Arch sts., Philadelphia. Owners, The Gill Glass Co., East York and Thompson streets, Philadelphia. Reinforced concrete, steel, brick and terra cotta, 3 stories, 248x184 feet, slag roof (elevators, heating and lighting reserved), cement, asphalt and maple floors, rolled steel sash and skylights, fire doors, fire escapes, iron stairs, waterproofing and dampproofing. Architects taking bids, due April 5th, from Irwin & Leighton, 126 North Twelfth street; Cramp & Co., Denckla Building; Barclay White & Co., 1713 Sansom street; Turner Concrete Steel Co., 1713 Sansom street; Warren-Moore Co., Commercial Trust Building; F. W. Mark Const. Co., Finance Building; Pomeroy Const. Co., 1609 Ransstead street; Cantrell Const. Co., Twenty-first and Sedgley avenue; Robt. Beatty & Bro., 2321 East Fletcher st., Philadelphia. Architects also taking sub-bids, due April 4th.

Garage, Fifth street, north of Fisher's avenue. Architect, Ralph H. Hothersall, 1431 Jerome street, Philadelphia. Owner, Mrs. Dora Mulligan, 157 South Texas avenue, Atlantic City. Brick, 1 story, 75x110 feet, slag roof (gasoline storage system reserved),

steam heating, electric lighting, metal lath, roof ventilators. Architect has received bids.

Cafe and Restaurant (alt. and add.), 34-36 South Fifteenth street, \$75,000. Architect, Ralph E. White, Pennsylvania Building, Philadelphia. Owners, Kugler's Restaurant Co., 1412 Chestnut street. Brick and stone, 2 stories. Plans in progress. Too early for details.

Saloon and Hotel (alt. and add.), 116 South Fifteenth street, Philadelphia. Architects, Henon & Boyle, 1. South Eighteenth street, Philadelphia. Owner, Margaret A. Kernan, northeast corner Fifteenth and Filbert sts. Brick, 2 stories, 18x62 feet, slag roof, pine and cement floors (plumbing, steam heating, electric work reserved), tile and marble work, metal lath. Architects have received bids.

Church and Sunday School, Third and Tabor road, Olney, Philadelphia. Architects, Duh-ring, Okie & Ziegler, 1218 Chestnut street, Philadelphia. Owners, First Presbyterian Church of Olney, care of Rev. W. H. Wells, on premises. Stone, 1 and 2 stories and basement, 111x56 and 75x95 feet, slate and slag roof, maple and cement floors (electric work plumbing and heating reserved), metal lath, rolled steel skylights, ornamental iron work. Architects taking bids, due April 11th at noon. H. Rea Co., 1027 Wood street; E. E. Hollenback, Inc., 1804 Brandywine street; R. C. Ballinger & Co., 218 North Thirteenth st.; H. E. Baton, Twelfth and Sansom streets; F. L. Hoover & Sons, 1023 Cherry street; F. B. Davis, 240 North Sixteenth street; H. H. Burrell, 206 South Quince street; F. E. Wallace, 1220 Chancellor street, and H. E. Grau Co., 1709 Sansom street; Standard Const. Co., 1713 Sansom street, and F. W. Van Loon, Denckla Building, are figuring.

Laboratory and Office Building, Bridesburg, Philadelphia, \$11,000. Architect, Harry Zimmerman, 4957 Hawthorne street, Frankford. Owners, hollow tile and plaster, 1 and 2 stories, 40x70 feet and 20x20 feet, slag roof (heating, plumbing, electric work reserved). Plans in progress. Architect will take bids in about three weeks.

Hospital (alt.), Race, west of Eighteenth street, Philadelphia. Architect, John T. Windrim, 1501 Commonwealth Building, Philadelphia. Owners, Wills Hospital, on premises. Consists of interior alterations, composition floors, electric lighting, tile and marble work, wire work. Architect has received bids.

Dwelling (alts. to Stores and Apartments), 3160 Kensington avenue. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Michael Rock, Jr., 832 East Allegheny avenue, Philadelphia. Consists of general alterations, new store fronts, metal ceiling, fireproof partitions, marble and tile work, hot water heating, yellow pine floors, slag roof, combination fixtures. Owner will take bids in a few days.

Schools (2) (alt. and add.), Ninth and Lindley avenue and Rhawn and D' streets. Architect, J. Horace Cook, Nineteenth above Chestnut street, Philadelphia. Owners, Board of Education, care of Wm. Dick, secretary, Nineteenth, above Chestnut street. Brick and stone, 2 and 3 stories, 48x92 feet and 88x33 feet, composition and slate roof, electric lighting, heating, marble work, rolled steel sash and skylights, fire doors, cement and maple

floors, hollow tile, metal lath, roof ventilators, metal weatherstrips, waterproofing, wire work. Owners taking bids, due April 5. H. E. Baton, Twelfth and Sansom streets; Wm. R. Dougherty, 1610 Sansom street; E. C. Durell, 1713 North Twenty-fourth street; McCloskey & Bahls, 1620 Thompson street; Melody & Keating, 1322 Race street; Standard Const. Co., 1713 Sansom street; H. H. Wehmeyer, 1004 Lehigh avenue; Mitchell Bros., 2125 Race street; George Dobbin, 414 South Forty-first street; Kramer Woodworking Co., Third and Cumberland streets; Thos. Reilly, 1616 Thompson street, are figuring.

Club (alt. and add.), northwest corner Thirteenth and Walnut streets, \$80,000. Architects, Melior, Meigs & Howe, 205 S. Juniper street, Philadelphia. Owners, Philadelphia Club, on premises. Brick, 2 stories, 30x100 feet ((plumbing, heating, electric work and (2) elevators reserved), slag roof, tile and marble work, hollow tile. Architects taking bids, due April 7. The following are figuring: H. E. Baton, Twelfth and Sansom streets; H. H. Burrell, 206 South Quince street; J. S. Cornell & Son, Land Title Building; George & Borst, 277 South Eleventh street; Thos. M. Seeds, Jr., Co., 1207 Race street; R. C. Balingier & Co., 218 North Thirteenth street; I. T. Shoemaker, 1328 Walnut street; Stacy Reeves & Sons, 2011 Market street.

Store and Dwelling (alt.) and Garage, 2551 Kensington avenue. Architects, Milligan & Pierson, 520 Walnut street, Philadelphia. Owner, Wm. J. Geggis, on premises. Brick, 3 stories; garage, 1 story, 20x22 feet, slag roof, hot water heating, electric lighting, pine and cement floors. Architects have received bids.

Automobile Plant, Erie avenue and B sts., Philadelphia. Engineer, private plans. Owners, S. S. E. Co., 2300 Chestnut street, Philadelphia. Pumping station, concrete, 1 story, 30x40 feet; boiler house, brick, steel and concrete, 1 story, 30x60 feet; boiler foundations, tank supplies, plumbing and sewage, 1000 feet of new streets, etc. Owners ready for bids.

Store (alt.), southeast corner Seventeenth and Venango streets, \$500. Architect, Wm. H. Wooters, 816 W. Allegheny avenue, Philadelphia. Owners, Hendricks Hardware Co., on premises. Consists of new bulk front, tile and marble work (glass and paints reserved). Owners have received revised bids.

Garage, Fifth street, north of Courtland street, Philadelphia. Owner, John Donahue, 420 North Fifth street, Philadelphia. Architect, private plans. Brick, 1 story, 60x100 feet, slag roof, cement floors, steam heating, electric lighting, metal lath, roof ventilators. Owner has received bids.

Residence, Foulkrod and Castor avenue, Philadelphia. Architect, Wm. E. Gray, 1603 Real Estate Trust Building, Philadelphia. Owner, John B. Sidebotham, 4317 Griscom st., Frankford. Brick, 2½ stories, 47x33 feet and 17x16 feet, slate or single roof, pine and cement floors, warm air heating, electric lighting, tile work. Owner taking sub-bids.

Laundry Building (alt. and add.), 5722-32 Race street, Philadelphia. Architect, Chas. F. Seipp, 2003 South Seventeenth street, Philadelphia. Owners, Philadelphia Laundry Company, on premises. Brick, concrete and steel, 2 stories, addition 68x103 feet, slag and slate roof (electric work, boiler, machinery, heat-

ing tanks and (1) elevator reserved), steam heating, maple, cement and composition floors, fire doors. Owners have received bids.

Recreation Buildings, League Island Park, Philadelphia, \$125,000. Architect, Ralph E. White, Pennsylvania Building, Philadelphia. Owners, City of Philadelphia, Dept. of Public Works, Geo. E. Datesman, director, City Hall, Philadelphia. Consists of pavilions, boat-house, toilet buildings, grand stand, etc. Plans will be completed in about two weeks. Owners will advertise for bids.

Paving, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Dept. of Public Works, Bureau of Highways, Geo. E. Datesman, director, room 232, City Hall. Consists of grading, paving (asphalt, granite block and wood block), etc. Owners taking bids, due April 5th at noon.

Garage, 5423 Lancaster avenue, Philadelphia. Architect, private plans. Owners, John Wanamaker, Thirteenth and Chestnut streets, Philadelphia. Brick, 2 and 1 story, 20x128 feet, slag roof, cement and pine floors, rolled steel skylights (heating, electric lighting and plumbing reserved). Owners have received bids.

Store Building (alt.), 1806 Market street, Philadelphia, \$5,000. Architects, Henon & Boyle, 10 S. Eighteenth street, Philadelphia. Owners, Dwight F. Fuller Estate, 10 S. Eighteenth street. Alterations to first floor, steam heating, electric lighting, tile, marble and terrazzo work, metal lath, store fixtures, metal bulks. Plans about completed. Architects will take bids.

Motion Picture Theatre (alt.), 1535 Chestnut street, \$10,000. Architects, Henon & Boyle, 10 S. Eighteenth street, Philadelphia. Owners, Arcadia Theatre, on premises. Plumbing, ornamental plastering, steam heating, electric lighting, tile and marble work, metal lath. Plans in progress. Architects ready for sub-bids in a week.

Garage, 6484 Woodbine avenue, Overbrook, Philadelphia, \$2,000. Architect, private plans. Owner, Milton W. Young, Overbrook, Pa. Brick and plaster, 1 story, 18x22 feet, slate roof, cement floors, central plant heating, electric lighting. Owners will build.

Office Building (add.), Twenty-ninth and Grays Ferry road. Architects, Bissell & Sinkler, Otis Building, Philadelphia. Owners, Henry Bower Chemical Co., on premises. Brick, stone and terra cotta, 2 stories, 57x46 feet, asbestos roof (heating and lighting reserved), tile and marble work, fire doors, iron stairs, metal lath, roof ventilators, waterproofing, cement floors. Architects taking bids, due April 7th. Metzger & Fisher, Denckla Building; H. H. Burrell, 206 South Quince street; George & Borst, 277 South Eleventh street, are figuring.

Residence (alt. and add.), 2019 Walnut st., Philadelphia. Architect, Edwin H. Fetterolf, 1524 Chestnut street, Philadelphia. Owner, Dr. Ed. H. Piper, 1305 Pine street, Philadelphia. Brick, stone trimmings, 1 story and basement, addition 8x20 feet, slag roof (heating and lighting reserved), cement and pine floors, tile and marble work, roof ventilators. Barrett Specification Roofs

Guaranteed
for 20-Years

A "Barrett Specification Avenue"

The real name of this street is Park Avenue.

It is located in the heart of New York City and lined on both sides with huge modern apartments, such as are shown in the above illustration.

We call it "Barrett Specification Avenue" because practically every permanent building in sight has a Barrett Specification Roof.

And this is not an unusual thing. For instance, we could send our photographer throughout the country taking pictures at random and the result would be the same. For most of the permanent buildings in every city and town carry this type of roof.

And the popularity of Barrett Specification Roofs is not to be

wondered at when you consider the following features:

First: Lowest unit cost per year of service.

Second: Freedom from maintenance expense.

Third: Approved as "Class A" construction and take the base rate of fire insurance.

Fourth: And most important, we now guarantee these roofs for 20 years under the following conditions.

How to Secure the 20-Year Guaranty Bond

We are now prepared to give a 20-Year Surety Bond on every Barrett Specification Roof of fifty squares and over in all towns in the United States and Canada of

25,000 population and more, and in smaller places where our Inspection Service is available.

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us without charge.

Our only requirements are that the roofing contractor shall be approved by us and that The Barrett Specification, dated May 1, 1916, shall be strictly followed.

Further information and copies of The Barrett 20-Year Specification, with roofing diagrams, free on request.

This
is the
Bond that
guarantees
your roof
for 20 years

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

RAILINGS AND GATES OF CHARACTER AND BEAUTY

Iron Railings and Entrance Gates of appropriate design and perfect proportion would add much to the dignity and attractiveness of many country places. In other locations, for the protection of lawns and gardens, an

ANCHOR POST FENCE

with galvanized steel posts and woven wire panels, makes an admirable and long lasting enclosure.

We have catalogues illustrating Entrance Gates and Iron Railings, Lawn Fences, Tennis Court, Poultry and Kennel Yard Enclosures, Aviaries, Arbors, Trellises, etc., and will gladly mail you the one you need.

LITHOFORM

A Positive Primer

FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

Per Gallon, \$3.00

Wire Talks

☐ There are no hold-ups under Audubon Service.

☐ You get your goods, to the day, and as nearly as possible to the hour when you are ready for them.

☐ And they are *right*—right as to size, design, quality, weight and material.

☐ Don't you figure, Mr. Builder, that this is worth something to you?

☐ Let us talk it over with you when you happen to be in the market for wire.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 15

PHILADELPHIA
April 11, 1917

As The Editor Sees It

THE figures for March, compiled by William W. Gamble, Statistician of the Philadelphia Bureau of Building Inspection, show a decrease in building activity compared with statistics for March in preceding years. There were issued during March of this year a total of 717 permits for 1,148 buildings, representing an outlay in expenditure of \$3,486,625, covering a period of ten years the average number of operations for March has been about 1,864, with an average outlay of approximately \$4,586,600.

The statistics for the month of March, since and including 1907, were as follows:

	Operations.	Cost.
March, 1907	1381	\$3,535,260
March, 1908	1250	2,489,940
March, 1909	1848	3,857,840
March, 1910	2361	5,343,270
March, 1911	2501	5,581,295
March, 1912	1633	3,691,895
March, 1913	1772	6,206,500
March, 1914	1807	5,175,530
March, 1915	2480	5,388,265
March, 1916	1606	4,590,630
March, 1917	1148	3,486,625

* * *

BUILDERS point out that the decrease registered by the month just ended should not be regarded as in any sense alarming, looking upon it as a natural reaction after the extraordinary activity of the past six months. It is predicted by men familiar with conditions that the next few months will show totals fit to be classed with the best of last year's returns. One of the factors counted on to materially advance normal activity is the demand for new construction as a result of war activity in all lines. The demand for ships, munitions, supplies of every kind and sort, incident to the fitting-out of a great army and navy

for active service, is looked to cause enlargements of mill and plant facilities passing all previous records.

Just here it may be said that Mr. Gamble's figures for the first quarter of the present year, which ended recently, compare favorably with those for the corresponding period of last year. During the first three months of 1916 there were started 3,422 operations, representing a total cost of \$8,887,470; during the corresponding period of this year 2,576 operations were started, at a total cost of \$9,673,370. That is a decrease of 846 in the number of operations, but an increase of \$785,900 in the amount spent for building purposes.

* * *

FOLLOWING is the detailed report for last month:

Character.	Opera- tions.	Estim'd cost.
Dwellings, 2-story	454	\$1,065,420
Dwellings, 3-story	50	396,140
Dwellings, frame	3	5,300
Tenement houses	1	16,000
Stables	5	800
Manufactories	5	636,000
Workshops	12	19,300
Garages	80	150,285
Office buildings	8	243,008
Stores	2	55,000
Warehouses	9	88,600
Churches	1	46,900
Engine and boiler houses	1	28,000
Bank buildings	1	18,000
Miscellaneous buildings	11	7,760
Additions	124	367,430
Alterations and repairs	253	248,310
Miscellaneous work	111	39,065
Heaters	8	5,205
Fire escapes	7	3,700
Signs	7	4,410
Power houses	1	42,000
Totals	1148	\$3,480,625

FIGURES compiled by the Board of Revision of Taxes incident to the preparation by that body of its records for the 1917 assessment disclose some interesting facts bearing upon Philadelphia's growth as a home and manufacturing city. According to these figures the total number of buildings in this city at the time of making up their books was 443, 104, or 40,670 more than the total shown by their records for 1916.

The 1917 figures, as compared with those for 1916, show an increase of all classes—stone, brick, stone-and-brick and frame. There was an increase of 6,453 in the number of two-story brick dwellings, for which this city is noted, and the number of two-story stone dwellings was 104 more than the number last year. The number of two-story brick-and-stone dwellings was slightly increased by 65. There was a reduction of 276 in the number of three-story brick houses, but an increase of 105 in the number of three-story stone houses. The number of frame dwellings was 45 less than the number the year previous.

* * *

OWING, no doubt, to excellent business conditions, there was a substantial increase in the number of properties used for various business purposes. Factories, mills and foundries showed an increase of 74, while there was also an increase of 179 in the number of buildings used for business and store purposes, not counting those properties that are known as stores and dwellings. Shops showed an increase of 49, and office buildings an increase of 19. The number of buildings occupied by banks, savings and trust companies was the same as in 1916, that is 108, and a slight decrease of 2 is shown in the number of properties under the heading breweries, distilleries, malt-houses and vaults.

**BLUE
PRINTS**

Churches show an increase from 946 to 958, but public school buildings show a decrease from 345 to 338. The number of buildings owned by schools under religious control, colleges and libraries increased by five, and a bare increase of one is shown in the number of hospitals, asylums and other buildings used for benevolent and charitable purposes. There was an increase of 46 in the number of properties, other than schools, owned by

the city, the State and the United States Government. The assessment books show also that in 1916 the number of unimproved lots in this city was 33,513, while this year the number is only 32,974, a decrease of 539.

* * *

AN encouraging growth in material prosperity and one of which Philadelphia has every right to be pardonably proud.

EDITORIAL NOTES

"Futurism and cubism do not reflect credit upon art and should not be encouraged. They only lower the old standard of art. The great majority of young artists do not have an adequate conception of drawing because of these freakish tendencies." This was the keynote of an address by Leslie W. Miller, principal of the Pennsylvania Museum and School of Industrial Art, at the annual banquet of the Eastern Arts Association in the Walton. Other speakers were George Wheeler, associate superintendent of schools, and Dr. Arthur D. Dean, director of industrial education, of New York.

* * *

E. M. Van Voorhees, architect, formerly of Van Voorhees & Harvey, Hale Building, has removed his offices to Suite 420-21 at 1535 Chestnut street, Philadelphia.

* * *

Joseph Burr Tiffany, famous art dealer and decorator, died at his home at Yonkers on Thursday. He was born in Hudson, N. Y., in 1856. Mr. Tiffany was regarded as one of the most eminent of art experts, and was particularly noted for his artistic decorations on musical instruments.

* * *

Peace overtures brought Contractor McHugh and Director Datesman together, after the litigation of the previous day. They met in the City Solicitor's office, and McHugh signed the contracts in dispute, and will proceed with the construction of the sewers. John H. McClatchey, the builder, whose operations were affected by the delay in the construction of the sewers, was also present. Director Datesman will not "blacklist" McHugh, and will also accept his bids for additional sewer construction which were withheld by the orders of the Director pending the outcome over the disputed contracts.

* * *

McHugh sought in Common Pleas Court No. 5 to restrain Director Datesman from blacklisting him, but the Court refused the application. McHugh claimed that after once having been told that the contract would not be awarded, and afterward instructed to proceed, the delay would cause a financial loss by reason of the advancing cost in materials since he first bid for the work in the fall of 1916. This order of suspension of the contracts was denied by Director Datesman.

There was some talk of an appeal to a higher Court to test the right of Councils to suspend to April 1 the ordinance increasing the cost of sewer construction to property owners from \$1.50 to \$2.50 per front foot, but the prospects of delay and the loss of city work while the case was being tested in the Supreme Court prompted McHugh to yield.

* * *

Ambrose Edwin Lehman, a native of Lebanon and more than 40 years a resident of Philadelphia, died at his home, 209 South Forty-third street. He was a civil engineer of note, a member of the American Philosophical Society, the American Institute of Mining Engineers, the Engineers' Club and the Art Club.

* * *

Charles F. Seipp, architect and engineer, has opened offices at 2008 South Seventeenth street, Philadelphia, where he will be pleased to receive samples, catalogues, etc.

* * *

Bearing the flaring title "Frightful Fire Losses!!!" in vivid crimson, the Merchant & Evans Company, of Philadelphia, have issued a very instructive little folder dealing with fire hazards and the advantage of Merchants' Old Method Roofing Tin as compared with wooden shingles, composition and other roofing. Copies of the folder may be had on request by parties interested.

* * *

Announcement has just been made by the Publicity Bureau of the Associated Metal Lath Manufacturers that their offices have been moved from Chicago to Room 901 Swetland Building, Cleveland, Ohio, and that Zenas W. Carter, formerly of Boston, has been appointed Commissioner, to supervise all their publicity, promotion and investigation from the Cleveland office. Mr. Zenas W. Carter has been manager for manufacturers' associations for the past ten years, directing co-operative publicity and promotion work between manufacturers, distributors and consumers. He was the first General Secretary of the Electric Development Association when it was incorporated in New England, and he has managed the publicity and field promotion and investigation work of the Granite Paving Block Manufacturers' Association of the United States since their organization two and one-half years ago.

Among the plans of the Metal Lath Association which are yet in the embryo is a co-operative national campaign of publicity which will be developed by the Council of Advertising Managers of the member companies, which Council is an active part of the Publicity Bureau of the manufacturers' organization, although the Publicity Bureau proper includes officials and sales managers of the companies interested. Their plans cover a series of extensive and exhaustive tests of the fire-resistance properties of metal lath, its use in fire retarding construction, the exploitation to architects and the public of the saving in space which can be effected through the use of this material, its vermin and rodent proofness; investigation and assistance in the revision of building codes of cities so that metal lath will receive its proper recognition by city officials and engineers, and a co-operative movement in the distributing centers of the United States seeking to develop co-operative promotion work on the part of the jobbers and large distributors of metal lath.

* * *

The Advertising Managers who comprise the Advertising Council of the Publicity Bureau of the Associated Metal Lath Manufacturers are: Mr. C. O. Powell (president), Northwestern Expanded Metal Company; Mr. S. E. Fechheimer, Trussed Concrete Steel Company; Mr. R. M. Nicholson, Berger Manufacturing Company; Mr. C. M. Stewart, Consolidated Expanded Metal Companies; Mr. L. E. Fisher, General Fireproofing Company; Mr. L. J. Rouleau, Penn Metal Company; Mr. F. E. Erickson, Milwaukee Corrugating Company; Mr. William George Lane (secretary), the Bostwick Steel Lath Company; Mr. Zenas W. Carter, commissioner. The Julian Armstrong Bureau of Related Industries will continue its special work for the Associated Metal Lath Manufacturers, and Mr. Walter L. Weeden, of Worcester, Massachusetts, has succeeded Mr. Carter as field secretary of the Granite Paving Block Manufacturers' Association, of Boston.

* * *

Councils' Committee on Legislation will have introduced in the Legislature a bill regulating the location and conduct of rag-shops in Philadelphia. The bill was prepared at the request of Director Krusen, of the Department of Health, because of the menace to public health presented by establishments of the kind.

* * *

John F. Brady, the live wire brick man, booked recently an order for a half million grays for Dupont's office building at Wilmington, Delaware, delivered from the Claycraft Brick Company. Mr. Brady represents, in addition to the Claycraft Company, of Columbus, Ohio, the oldest fire brick concern in America, the Queen's Run Fire Brick Company, of Lock Haven, Pa.; the Reading Shale

Brick Company, of Reading, and the Royalton Shale Brick Company, of Middletown, Pa. He is interested, also, in a yard and plant at Plymouth, Pa., which has a capacity of 40,000 per day—paving block, roofing tile, brick and hollow tile. The Claycraft concern, represented by Mr. Brady, turns out a highly artistic brick in grays and buffs. Before the

Queen's Run Company began making fire brick 77 years ago, all the fire brick used in the United States was imported from Europe. Mr. Brady handles every variety of brick manufactured and enjoys the reputation of invariably making good when it comes to deliveries. His offices are located in the Crozer Building, Philadelphia.

ARCHITECT BILL BEFORE SENATE

An act to regulate the practice of architecture as a profession in Pennsylvania was read in place by Senator Vare at the Senate session. The act creates a State Board of Examiners, one to be a member of the faculty of the School of Architecture of the University of Pennsylvania; another a member of the faculty of the Department of Architecture of Carnegie Institute of Technology, Pittsburgh; another a member of the faculty of the school of engineering teaching architectural engineering of the Pennsylvania State College and the remaining four architects residing in the State who have been in continuous practice of architecture for at least ten years. A fee of \$10 is required for examination. Applicants must be more than twenty-five years of age, must have obtained a preliminary education equivalent to a course of study in a first-class high school and had at least seven years' con-

tinuous practical experience in the office of a reputable architect. A license is to be issued to applicants who pass a satisfactory examination. Persons engaged in the practice of architecture at the time of the passage of the act need not undergo examination, but are required to pay the fee of \$10 and submit proof that they have continuously engaged solely in the practice of architecture for two years immediately preceding the passage of the act. Licenses are only for one year and are renewed each January by payment of the \$10 fee. It is made unlawful after January 1, 1918, for any person to practice architecture within the State without a license. Violation of the act makes the offender liable to a fine of not less than \$50 for the first offense, for the second a fine not less than \$200 nor more than \$500, or to undergo an imprisonment in the county jail of not more than a year, or both at the discretion of the Court.

HOW ANCIENT TEMPLES AND PYRAMIDS WERE BUILT.

This is beyond modern conjecture, so imperfect is our understanding of the extent of the mechanical knowledge of the ancients. Their appliances are believed to have been of the simplest order, and their implements exceedingly crude, and yet they were able to convey these enormous blocks of stones for vast distances, over routes most difficult, and having accomplished this, to raise them to great height, and fit them in place without the aid of either cement or mortar to cover up the errors of the stone-cutter. How all this was done is one of the enigmas of modern science. It has been generally believed that inclined planes of earth were used to enable the workmen to raise the huge stones to their places, the earth being cleared away afterward. But it is possible that the ancient had a more extended knowledge of mechanical powers than we usually give them credit for, and that they made use of machinery very like that employed by modern for lifting great weights. Large cavities are found in some of the stones in the pyramids, which may have been worn by the foot of a derrick turning in them. That there were enormous numbers of men employed in the building of these ancient structures is well known; these results of their great aggregated strength we see, but they left no record of the means by which this strength was focused and brought most effectually to bear on their mighty tasks.

CHINA'S GREAT WALL.

The dimensions of the great wall of China and of what it is built.—It runs from a point on the Gulf of Liantung, an arm of the Gulf of Pechili in Northeastern China, westerly to the Yellow River; thence makes a great bend to the south for nearly 100 miles, and then runs to the northwest for several hundred miles to the Desert of Gobi. Its length is variously estimated to be from 1,250 to 1,500 miles. For the most of this distance it runs through a mountainous country, keeping on the ridges, and winding over many of the highest peaks. In some places it is only a formidable rampart, but most of the way it is composed of lofty walls of masonry and concrete, or impacted lime and clay, from 12 to 16 feet in thickness, and from 15 to 30 or 35 feet in height. The top of this wall is paved for hundreds of miles, and crowned with crenellated battlements, and towers 30 to 40 feet high. In numerous places the wall climbs such steep declivities that its top ascends from height to height in flights of granite steps. An army could march on the top of the wall for weeks and even months, moving in some places ten men abreast.

Advertiser! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

RUNNING EXPENSES OF NEW YORK.

The tremendous increase in the cost of government in New York City is shown by the following table, showing the increase in the eighteen years, 1900 to 1917 inclusive:

Year.	Budget.
1900.....	\$92,397,446.46
1901.....	99,826,582.67
1902.....	100,349,619.30
1903.....	98,641,240.17
1904.....	108,362,622.29
1905.....	111,562,409.59
1906.....	118,650,552.08
1907.....	130,421,505.66
1908.....	143,572,266.17
1909.....	156,545,143.14
1910.....	163,128,270.37
1911.....	173,967,835.16
1912.....	181,090,256.51
1913.....	192,711,441.16
1914.....	192,995,551.62
1915.....	198,989,786.52
1916.....	212,956,177.54
1917.....	211,115,016.82

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Stores (3) and Garage, Broad and Allegheny avenue, Philadelphia. Architect, private plans. Owners, Crumbie Bros., on premises. Brick, 1 story, 55x140 feet, slag roof, cement and pine floors, steam heating, electric lighting, marble work, metal lath, hollow metal skylights, roof ventilators. Owners taking revised bids, due April 13th. Henry P. Schneider, 3713 Old York Road, and Conneen Const. Co., 1737 Filbert street, Philadelphia, are figuring.

Stores (alt.), 4939-41 North Broad street, Philadelphia, \$15,000. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, F. W. Woolworth Co., Woolworth Building, New York City. Brick and stone, consists of interior alterations and new front, pine floors, electric lighting, tile and marble work, metal lath, metal bulks. Plans in progress.

Residence, Chestnut Hill, Philadelphia (Rising Sun avenue). Architect, E. M. Van Voorhees, 1535 Chestnut street, Philadelphia. Owner, L. M. Martin, Twelfth and Chestnut sts., Philadelphia. Brick, frame and stucco, 2 stories, 36x21 feet, shingle roof, hot water heating, electric lighting, tile work, cement and oak floors, metal lath, wire work. Architect taking bids, due April 14th. E. J. Kreitzburg, 1345 Arch street; Specht & Sperry, Heed Building; Freund Const. Co., Bulletin Building, and J. Sims Wilson Co., 1125 Brown st., are figuring.

Factory, Stenton avenue, Wayne Junction, Philadelphia. Engineer, Kern Dodge, Morris Building, Philadelphia. Owners, American Metal Works, Armat and Heiskell streets. Reinforced concrete, 4 stories, 60x300 feet. Plans about completed. Engineer will take bids in a week.

Schools (2) (alt. and add.), Ninth and Lindley avenue and Rhawn and D streets. Architect, J. Horace Cook, Nineteenth above Chestnut street, Philadelphia. Owners, Board of Education, care of Wm. Dick, secretary, Nineteenth above Chestnut street. Brick and stone, 2 and 3 stories, 42x92 feet and 88x33 feet, composition and slate roof, electric heating, marble work, rolled steel sash and skylights, fire doors, cement and maple floors, hollow tile, metal lath, roof ventilators, metal weatherstrips, waterproofing, wire work. Low bidders: Melody & Keating, 1322 Cherry street, (Ninth and Lindley—\$53,848); H. H. Wehmeyer, 1004 Lehigh avenue (D and Rhawn streets—\$39,429).

Subway Station, Contract No. 520, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Dept. of City Transit, Wm. S. Twining, director, Bourse Building, Philadelphia. Structural steel. Owners taking bids, due April 17th at noon.

Subway Stations, Contracts 103, 104 and 204, Architect, private plans. Owners, City of Philadelphia, Dept. of City Transit, Wm. S. Twining, director, Bourse Building, Philadelphia. Excavating, heavy construction under-

pinning, reinforced concrete, waterproofing, dampproofing, skylights, safety treads, iron stairs. Lowest bidders, Keystone State Const. Co., Pennsylvania Building, on contract No. 103, \$2,315,000; contract No. 204, \$3,326,000; Philadelphia Subway Const. Co., Lincoln Building, contract No. 104, \$2,885,000.

Club (alt. and add.), northwest corner Thirtieth and Walnut streets, \$50,000. Architects, Mellor, Meigs & Howe, 205 S. Juniper street, Philadelphia. Owners, Philadelphia Club, on premises. Brick, 2 stories, 50x100 feet (plumbing, heating, electric work and (2) elevators reserved), slag roof, tile and marble work, hollow tile. Architects have received bids.

Rectory, Fiftieth and Master streets, Philadelphia. Architect, Paul Monaghan, Drexel Building, Philadelphia. Owners, Our Lady of Angels R. C. Church, care of Rev. Victor Strumina, Fiftieth and Master streets, Philadelphia. Brick and stone, 2 stories, 26x43 feet, tin roof, pine floors, electric lighting, wire work. Architect has received bids.

Loft Building, southwest corner Broad and Brown streets, Philadelphia. Architect, Le Roy B. Rothschild, Bulletin Building, Philadelphia. Owners, R. A. Heymann & Bro., Widener Building, Philadelphia. Reinforced concrete, brick and stone, 5 stories, 40x100 feet, slag roof (plumbing, steam heating, electric work, (1) elevator reserved), cement and tile floors, tile and marble work, metal lath, roof ventilators. Architect taking bids, due April 11th. The following are figuring: Warren-Moore & Co., Commercial Trust Building; Cramp & Co., Denckla Building; Turner Concrete Steel Co., 1713 Sansom street; I. T. Shoemaker, 1324 Walnut street; Stacy Repves & Sons, 2011 Market street; F. A. Havens & Co., 845 North Nineteenth street, are figuring.

Factory Building, Swanson and McKean streets, Philadelphia. Architect, Wm. C. Furber, 418 Walnut street, Philadelphia. Owners, India Refining Co., on premises. Brick, 3 stories. Architect selected. Details not decided. Plans to be started soon.

Store Building (alt. to first and second floors), southeast corner Broad and Wallace streets, Philadelphia. Architect, Le Roy B. Rothschild, Bulletin Building, Philadelphia. Owners, Kahn & Greenburg, Morris Building, Philadelphia. New marble front, brick work, maple floors, electric lighting, metal lath, metal bulks, metal ceilings. Owners and architects taking sub-bids.

Machine and Electrical Shop, League Island, Philadelphia. Architect, private plans. Owners, U. S. Govt., Bureau of Yards and Docks, P. R. Harris, chief, Washington, D. C. Reinforced concrete, hollow tile and steel, 4 stories, 120x325 feet or 130x675 feet, slag roof, pine floors, rolled steel sash, fire doors (plumbing, heating, electric work separate bids), rolling steel shutters. Low bidder, F. W. Mark Const.

Co., Finance Building, Philadelphia, 130x325 feet, \$300,000; 130x675 feet, \$610,000.

Grit Chamber (Superstructure), north of Lycoming and west of O street. Architect, Chester E. Albright, Land Title Building, Philadelphia. Owners, City of Philadelphia, Dept. of Public Works, Bureau of Surveys, Geo. E. Datesman, director, room 534 City Hall, Philadelphia. Reinforced concrete, brick and steel, 1 story, 60x40 feet, slate roof, (heating, electric work, plumbing, separate bids), tile and marble work, hollow tile, metal lath, rolled steel skylights, fire doors, safety treads. Owners have received bids.

Residence (alt.), 1415 North Broad street, Philadelphia. Architects, Magaziner & Potter, 603 Chestnut street, Philadelphia. Owner, Mrs. Gimbel, 914 North Broad street, Philadelphia. Consists of interior alterations, mill-work and cabinet work, lavatories. Architects taking approximate bids from Wm. R. Dougherty, 1610 Samson street.

Residences (34), southeast corner Forty-fourth and Parkside avenue, Philadelphia. Architect, not selected. Owner, Jacob Ash, 4176 Leidy avenue, Philadelphia. Brick, 2 stories. Work contemplated for this spring.

Garage (add.), 2539-41 West Huntingdon street, Philadelphia. Architect, private plans. Owner, John P. Maher, 2733 West Lehigh avenue, Philadelphia. Brick, 1 story, 60x37 feet, slag roof, (heating and lighting reserved). Owner taking bids, due as soon as possible. John N. Gill & Co., Otis Building, are figuring.

Office Building (add.), Meadow and Mifflin streets, Philadelphia. Architect, private plans. Owners, Niles-Bement-Pond Co., on premises. Brick, 1 additional story, 20x43 feet, slag roof, maple floors, wall board. Owners taking bids, due as soon as possible. Irwin & Leighton, 126 North Twelfth street; Brown-King Cost. Co., Commercial Trust Building; Graham-Campion Co., Otis Building; Wm. Henderson & Son, 327 South Twentieth street, and Edwin M. Evans, 321 South Lawrence st., are figuring.

Garage and Storage Sheds, Nineteenth and Sedgley avenue. Architect, not selected. Owners, J. Jacob Shannon & Co., 1714 Market street, Philadelphia. Brick and steel. Work contemplated. Details and plans not decided.

Lumber Sheds, southwest corner, Thirtieth and Indiana avenue. Architect, private plans. Owners, Chas. H. White & Sons Co., Inc., on premises. Steel or timber. Details not decided.

Residences (21), Sixty-seventh and Elmwood avenue, Philadelphia. Architect, private plans. Owners, Steltz & Melony, Sixty-seventh and Elmwood avenue, Philadelphia. Brick, 2 stories, 15x38 feet and 16x32 feet, slag roof, hardwood floors, hot water heating, electric lighting. Owners taking sub-bids.

Residences, Wynnefield, Philadelphia. Architect, private plans. Owner, name withheld.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. DAVID FRANCE CO., Tasker Street, Wharf, Delaware River, Philadelphia.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

THE UNITED GAS IMPROVEMENT CO.

skylights, ventilators, dampproofing, metal lath, tile, marble, slate or terrazzo work, dumb waiters, cement floors, metal windows and doors. Low bidder, J. Henry Miller, Inc., Eutaw and Franklin streets, Baltimore.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 27, 1917.—Sealed proposals will be opened in this office at 3 P. M. May 8, 1917, for the construction of the United States post office at Media, Pa. Drawings and specifications may be obtained from the custodian of the site at Media, Pa., or at this office, in the discretion of the Supervising Architect. Drawings and specifications will be ready for delivery after J. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 16

PHILADELPHIA
April 18, 1917

As The Editor Sees It

ON Chestnut street above Tenth, on the south side of the street, the Philadelphia Electric Company has in process of erection an addition to its present building.

Chestnut street is a particularly busy shopping center at this point and under the old, slovenly processes of building erection as it used to be carried on would present an eyesore of clutter, disorder, mud and confusion during the period necessary to complete a structure such as Philadelphia Electric proposes to build.

How far we have progressed, in this respect, from the conditions that once obtained, a casual glance, in passing, at the site in question will reveal to those interested.

A neat gate shuts off the public view from the excavation and foundation work going on behind it. The sidewalk is built over with an attractive shed designed to carry material awaiting use and to protect passers-by from possible injury. This shed is pleasing in design, painted in agreeable shades of brown and buff and bears on the side fronting Chestnut street the name of the company. Altogether, it is one of the most effective examples of consideration for the public and for the interests of adjoining shops, that we have noted in many years. It is not only highly creditable to the Philadelphia Electric Company, but should serve as a model worth adopting, among builders generally.

It is brilliantly lighted at night and reduces, to a degree altogether noteworthy, the disagreeable aspect normally incident to building activity in the city's center.

* * *

OF a piece with this is the new automobile oil supply station erected by the Atlantic Refining Company at the intersection of Broad street

and the Northeast Boulevard. In place of setting up, as would have been the case just a few years back, a hideous, staring shack designed to meet the commercial side only of the problem in hand, the Atlantic Company has gone to the expense of placing at this point on the city's beautiful boulevard a building in every sense adapted to key with its attractive surroundings. Instances such as these go far to prove that, despite the spirit of gloomy prophecy in which we are moved to indulge, at times, regarding the hopelessness of the popular taste there is an undercurrent ceaselessly at work for better things.

It cannot be regarded as other than distinctly encouraging that great service corporations such as the Philadelphia Electric and the Atlantic Refining Company should exhibit, spontaneously, this consideration for the purely aesthetic point of view. It means, if it means anything, that the teachings of those who preach the doctrine of art for art's sake is not wholly lost upon the great lay public and that the principle that a structure should observe certain rules of harmony in its relation to adjoining structures is slowly forcing its way to a more or less general recognition.

* * *

ON another page of this number of THE GUIDE we are printing the text, in full, of Senate Bill No. 744, providing for the registration and licensing of architects in the State of Pennsylvania. This bill, introduced by Senator Edwin H. Vare, provides for a State Board of Examiners, and other reforms, aimed at bringing the trained architect into the measure of recognition that is his due. This will be the first printing of the bill, in full, in any newspaper or magazine since its introduction.

WILBUR E. MALLALIEU, general manager of the National Board of Fire Underwriters, has just issued in pamphlet form, with amplifications, an article prepared by him for the *New York Tribune*, dealing with the prevalence of fires, causing heavy loss, due to clearly preventable causes.

This article shows, among other things, that of all the fires, 500,000 or more in number, which happen annually in the United States, nearly forty per cent. are traceable to causes which issue from indifference to conditions plainly preventable. The pamphlet is one that should be of interest to every architect, builder, building owner and investor in the United States. Copies of it may be had on request by those who address a line to Mr. Mallalieu at the headquarters of the National Board of Fire Underwriters in New York City.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

EDITORIAL NOTES

The market for building materials and supplies has responded to the increasing activity. Prices are generally holding steadily, with a tendency toward further advances. Practically all of the metal products continue to advance in price, and increases are looked for in Portland cement and other masons' materials. The excellent weather of the past two weeks has had much to do with the progress of the building business. There is every prospect now of a continuation of these conditions, which will no doubt daily increase the demand for structural materials. There seems now to be no cause for apprehension on the part of the manufacturers and dealers in structural commodities for anything other than a flourishing building season.

Reports from Williamsport, Pa., state that many families are having considerable trouble in obtaining suitable homes, and that in a number of instances householders have found it necessary to "double up." The idea of two families living in the same house has created a sensation in Williamsport.

Walter H. Simon, Box 675, El Dorado, Kansas, has charge of the architectural work for the Sharp Brothers Construction Company, with a number of projects throughout Kansas, and desires samples and catalogues from building material manufacturers.

Since New York City cannot find any cash buyers for its unused real estate, it has evidently adopted the policy of trading them for property it can use. The passing of city properties which have outlived their usefulness into private ownerships has a double value. In the first place, the sale automatically places them back on the assessment rolls as liable for taxation, and, in the second place, makes them available for reimprovement, directly benefiting the entire neighborhood.

William D. Lewis has been appointed manager of the Chicago branch of the Yale & Towne Manufacturing Company to succeed Walter A. Lockwood, whose resignation takes effect April 1. Mr. Lewis has been associated with the company for thirteen years, first in the factory, then in the New York offices, and for the past five years as assistant to Mr. Lockwood in the Chicago branch.

"No building is safe, from the viewpoint of hazard to life in case of fire, which cannot be emptied in three minutes," reads a statement recently published by a New York firm of engineers.

G. R. Stearns and Horace W. Castor, architects and engineers, have dissolved their partnership by mutual consent. Mr. Castor an-

nounces that he will continue to engage in the practice of architecture, in the Stephen Girard Building, Philadelphia, Pa.

The National Pipe and Supplies Association will hold its annual convention in Philadelphia, May 9-10. Headquarters, Bellevue-Stratford Hotel.

The New Jersey Terra Cotta Company, 149 Broadway, has obtained the contract for the architectural terra cotta for the addition to the office building at the northwest corner of William street and Maiden lane, New York City. The Edward Corning Company has the general contract.

The American Hardware Manufacturers' Association and the Southern Hardware Jobbers' Association will hold their convention at the Rice Hotel, Houston, Texas, April 17-20. P. D. Mitchell, 233 Broadway, New York, is secretary-treasurer.

The National Machine Tool Builders' Association will hold its spring meeting at the Hotel Sinton, Cincinnati, Ohio, May 21-22.

The New Jersey State Association of Master Plumbers will hold its annual convention at Elks Hall, Jersey City, N. J., May 15-17.

The American Society for Testing Materials will hold its twentieth annual meeting at Atlantic City, at the Hotel Traymore, June 26 to 30, inclusive.

The National Fire Protection Association will hold its annual meeting in Washington, D. C., May 8-10, 1917.

Harold F. Secor has opened an office for the practice of architecture at York Road and Green Lane, Philadelphia, where he will be pleased to receive catalogues, samples, etc.

Owners of property, including State Senator James P. McNichol and former Mayor Rudolph Blankenburg, that has been acquired by the city, through condemnation proceedings, for the extension of Logan Square westward, will be paid an aggregate of \$812,625, by terms of a report filed by the Board of View in Common Pleas Court, No. 3. At the hearings conducted by the Board to fix the amount of awards, the owners asked a total of \$1,024,323, while the city's experts valued all the properties at \$790,925.

The National Board of Fire Underwriters estimates that of the \$153,000,000 of fire losses in the country in 1915, \$32,700,000, or 21.4 per cent., resulted from strictly preventable causes, and another 37.9 per cent. from causes partly preventable.

Work on constructing the new Free Library building, at Nineteenth street and the Parkway, probably will begin next week, Director of Public Works Datesman announced, following the action of Mayor Smith in executing the contracts, which total \$2,664,697. The contract for the building proper, \$2,219,000, to the George A. Fuller Construction Company, is based on having the stone used cut outside the city. Judge Patterson, Common Pleas Court, No. 1, recently dismissed an injunction suit instituted by John F. Flinn, who sought to have the stone cut in this city, which would have cost \$155,000 additional. "Ever since plans were made for the building, and contractors were asked to bid on the work, many obstacles have arisen," Mr. Datesman said. "An appeal taken from Judge Patterson's decision is now pending in the Supreme Court. The anxiety of Mayor Smith to get the great improvement under way led him to take the chance of a second victory in the Supreme Court and sign the contract."

BOOKS RECEIVED.

"Estimating Building Costs," by William Arthur, published by the David Williams Company, New York, is an admirable little handbook for the use of building tradesmen, contractors, material men and technical students interested in getting at the right principle of figuring construction costs in all branches of the building trades. It is a plain, straightforward, easily-grasped, and eminently practical guide to the man who is called upon to do estimating, whether for himself or others. The author has had years of practical experience, knows his subject and has avoided the technical so that his little volume bids fair to supply a real want. It is pocket size, large, clear type, arranged so as to make ready reference to it a matter of ease, and is strongly bound. Altogether an excellent contribution to a live subject.

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scripper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

—Ex.

THE BILL TO LICENSE ARCHITECTS

Complete Text of Senate Bill No. 744 to Provide for Examination, Registration, and Licensing of Pennsylvania Architects.

The complete text of Senator Vare's bill is here given:

AN ACT

To regulate the practice of architecture as a profession in the Commonwealth of Pennsylvania by providing for the granting of licenses to practice architecture to and the examination and registration of architects by a State Board of Examiners, defining the powers and duties of said Board of Examiners and providing penalties for the violation of this act.

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same: That within sixty days after the approval of this act the Governor shall appoint a State Board of Examiners of Architects, which board shall consist of seven members and be composed as follows:

One member thereof shall be a member of the faculty of the School of Architecture of the University of Pennsylvania, another a member of the faculty of the Department of Architecture Carnegie Institute of Technology, Pittsburgh, Pennsylvania, another a member of the faculty of the School of Engineering teaching Architectural Engineering of the Pennsylvania State College, and the remaining four members shall be architects residing in the State of Pennsylvania who have been in continuous practice of architecture for a period of at least ten years, and all the members of said board shall be at the time of their appointment members of the American Institute of Architects.

In making the first appointments under this act the Governor shall appoint two of the said members of said board to hold office for a period of two years, two to hold office for a period of four years and the remaining three to hold office for a period of six years from the date of appointment, and thereafter all appointments shall be for a period of six years. In case a successor is not appointed at the expiration of the term of any member, such member shall hold office until his successor has been duly appointed and has qualified. In the event of any vacancy occurring in the membership of said board in any manner other than by expiration of term, the Governor shall fill said vacancy by an appointment for the unexpired term. The members of said board shall before entering upon the discharge of their duties subscribe to and file with the Secretary of the Commonwealth the constitutional oath of office.

Section 2. The word "Architect" as used in this act means any person engaged solely in the preparation of drawings and specifica-

tions for and in the supervision of the erection, enlargement or alteration of any building or buildings structure or structures for the use of and to be constructed by any other person or persons, association, copartnership or corporation, but nothing contained in this act shall be construed to prevent any person, firm, association or corporation from making drawings or specifications for or supervising the erection, enlargement or alteration of any building or structure for his or its own use or occupancy.

Section 3. The said State Board of Examiners of Architects shall meet for organization within sixty days after its appointment by the Governor and shall elect from its membership a President, a Secretary, and a Treasurer.

The said board shall adopt all necessary rules, regulations and by-laws not inconsistent with this act and the constitution and laws of this State or of the United States to govern its times and places of meeting for organization and reorganization and the holding of examinations, the length of the terms of its officers and all other matters requisite to the exercise of its powers, the performance of its duties and the transaction of its business under the provisions of this act.

The said board shall adopt a seal containing the words "Pennsylvania State Board of Examiners of Architect, organized _____, one thousand nine hundred and seventeen," of which seal the Secretary shall have the care and custody.

Section 4. The Secretary of said board shall keep a true record of all proceedings of the board and may employ such clerical assistance as the board may deem necessary.

The said board shall be charged with the duty of enforcing the provisions of this act and may incur such expenses as shall be necessary, all of which expenses shall be paid out of the funds and in the manner hereinafter mentioned and provided, and said board shall file with the Governor annually a full report of its operations.

Section 5. All fees provided for by this act shall be paid to and receipted for by the Treasurer of said board, to be by him held as a fund for the use of said State Board of Architects. and to be paid out by him only upon the written order or warrant of the President and Secretary, of said board. Said Treasurer shall give a bond to the Commonwealth for the use of said board in such amount and with such conditions as said board may prescribe.

All expenditures of the said board shall be paid from the funds received under the provisions of this act and said expenditures shall in no case be paid from the State Treasury, but it shall be the duty of the Board of Com-

missioners of Public Grounds and Buildings to provide and furnish a suitable office in the city of Harrisburg for the transaction of the business of the said Board of Examiners.

The said Treasurer may retain in his custody at any or all times such sums as may be necessary to defray the ordinary expenditures of the board, but all moneys in his hands in excess of the sum of two thousand dollars on the first day of December in each year shall be paid by the Treasurer of the said board into the State Treasury.

No member or officer or officers of the Board of Examiners shall be entitled to any compensation for his services except the Secretary and Treasurer, and the salaries of these officers shall not exceed five hundred and two hundred and fifty dollars per annum respectively. The members of the board, however, shall be reimbursed out of the funds of the board for traveling, hotel, clerical and other requisite expenses incurred in the performance of their duties under this act.

Section 6. Four members of the board shall constitute a quorum and the regular and special meetings of the board shall be called and held in the manner and at the times and places prescribed in the by-laws, but at least two meetings shall be held each year for the purpose of examining applicants for licenses to practice architecture.

Section 7. From and after the approval of this act any person desiring to enter upon the practice of architecture in this State may deliver to the Secretary of the State Board of Examiners of Architects upon the payment of a fee of ten dollars to the Treasurer thereof a written application for a license to practice architecture. Such applicant shall produce proof satisfactory to said board that the applicant is more than twenty-five years of age, of good moral character and has obtained a

Irving Dillon.....Editor

preliminary education equivalent to the course of study in a first class high school and has had at least seven years continuous practical experience in the office or offices of a reputable architect or architects, including the supervision of works.

Upon the making of such proof of eligibility for examination the said board, if satisfied with the same, shall admit such applicant to an examination in such technical and professional courses as may be established by said State Board of Examiners of Architects.

Said examination shall be conducted by the full board or a committee of at least two members of the same duly delegated by said board.

If such applicant shall successfully pass such examination the said board shall issue to such applicant under its seal a license to practice architecture in the State of Pennsylvania, which said license shall be signed by the President and Secretary of the board and shall be in such form as may be prescribed by said board, but the same shall contain the name of the successful applicant, his or her place of business and the words "Admitted to practice architecture in the State of Pennsylvania the _____ day of _____, one nine one."

Section 8. The said office of said State Board of Examiners of Architects shall be open during business hours each day of the year, Sundays and holidays excepted, in which office the Secretary of the board shall keep an official register of all licenses to practice architecture issued under the provisions of this act and of the renewals of the same as hereinafter provided for, which register shall be properly indexed and shall be open for public inspection and information.

Section 9. Any person residing or having a place of business in this State who at the date of the approval of this act was engaged in the practice of architecture under the title of architect may secure a license to continue to practice architecture without undergoing the above mentioned examination, provided that such person shall within six months after the date of the approval of this act file with the Secretary of said board a written application for a license to practice architecture, accompanied by a fee of ten dollars, and shall submit proof satisfactory to said board that the applicant is not less than twenty-five years of age, of good moral character and has been continuously engaged solely in the practice of architecture individually or as a member of a firm of architects in the State of Pennsylvania for a period of two years preceding the approval of this act.

Section 10. The said State Board of Examiners of Architects may also issue licenses to practice architecture without examination to any applicant therefor making satisfactory proof that the applicant possesses the following qualifications:

(a) Is the holder of a diploma of graduation or satisfactory certificate from a recognized architectural college or school and has had at least five years continuous practical experience in the office or offices of a reputable

architect or architects, including supervision of works, which said period of practical experience shall be considered as beginning only at the completion of the course of study leading to said diploma or certificate; or

(b) Is the holder of a license or certificate of authority to practice architecture issued by another State or country where the standard of qualifications for obtaining such license or certificate of authority is not lower than the standard fixed by the Pennsylvania State Board of Examiners of Architects, and which State of country admits to practice within its jurisdiction the holder of licenses duly issued by the State of Pennsylvania under this act.

Section 11. Each original license to practice architecture issued under the provisions of this act shall authorize the holder thereof to practice architecture throughout this State from the date of the issuance of said license until the last day of January in the year next succeeding the date upon which the said license was issued, unless said license shall be revoked for cause as hereinafter provided.

Section 12. Each architect licensed to practice architecture under the provisions of this act shall annually in the month of January during the time such holder shall desire to continue the practice of architecture in this State pay to the Treasurer of the said State Board of Examiners of Architects a fee of ten dollars, whereupon the said board shall issue to such architect in such form as the said board may provide a renewal of said license for the term of one year, and such renewal of license shall be duly registered by the Secretary of said board in the official register of the board hereinbefore provided for.

In the event that any holder of a license to practice architecture shall neglect or fail to have said license renewed in the manner herein provided during the month of January in each and every year, the right of such architect to practice architecture in this State shall cease and determine on the last day of the month of January during which said license or certificate should have been renewed under the provisions of this act, and it shall be the duty of the Secretary of the said State Board of Examiners of Architects to give notice in writing of the expiration of such license to the holder thereof and make a proper entry on said register showing the expiration of such license.

Any holder of a license to practice architecture which has expired under the provisions of this act may obtain a renewal of such license at any time within one year from the date of its expiration upon paying to the Treasurer of the State Board of Examiners of Architects a fee of fifteen dollars.

Section 13. The said State Board of Examiners of Architects may by unanimous action revoke any license to practice architecture issued or renewed under the provisions of this act for gross incompetency or recklessness in the practice of his profession or for dishonest practice on the part of the holder thereof.

Any architect holding a license of said Board

of Examiners of Architects against whom any of the foregoing charges may be preferred shall be furnished by the said board with a copy of the charges and shall be entitled to a hearing before the said board at which witnesses may be examined respecting the guilt or innocence of the person accused.

In the event that said license is revoked by said board the Secretary shall make proper entry and registration of the fact of said revocation and shall give notice in writing of such revocation to the holder of said license.

At any time after the expiration of six months from the date of revocation of said license and upon the payment of all costs incurred by said board the person whose license has been revoked may make application to the said Board of Examiners of Architects for a new license, and the said board upon receiving evidence which in its opinion would warrant the granting of a new license may in its discretion issue a new license upon the payment of a fee of ten dollars.

Section 14. The Secretary of the said Board of Examiners shall provide each holder of a license to practice architecture with a seal, the impression of which or of any convenient facsimile imprint thereof shall appear on all drawings and other instruments of architectural service that may thereafter be issued by the holder thereof.

Said seal shall contain the name of the person to whom issued, the word "Architect," his or her place of business and the number of his or her certificate, together with the encircling words "Admitted to Practice in the State of Pennsylvania." Said State Board of Examiners shall upon request of license holders practicing as firms provide a like form of seal suitable for firm use in place of said individual seals; provided, however, that the certificate numbers of the persons comprising each firm appear on the seal issued for such use. All seals shall remain the property of said board and be returned to the Secretary within thirty days of the expiration of the certificate under which their use is authorized. The cost of their issuance and use shall be fixed by the said board.

Section 15. On and after January 1st, one thousand nine hundred and eighteen it shall be unlawful for any person in the State of Pennsylvania to enter upon or continue the practice of architecture in the State of Pennsylvania or to hold himself or herself forth as a practitioner in architecture or to assume the title "Architect" or any other word or any letters or figures indicating or intended to imply that the person using the same is an architect unless he or she has complied with the provisions of this act and is the holder of a license to practice architecture issued or renewed under the provisions of this act.

Section 16. Any person violating any of the provisions of this act shall be guilty of a misdemeanor, and upon conviction thereof shall be sentenced for the first offense to pay a fine of not less than fifty dollars nor more than one hundred dollars, and for a second

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

BUILDERS

Before your present company has a chance to say "No," ask me about placing your surety bonds. I'll give you the best of service, relieve you of all details, insure your getting lowest rates and protect you in every way. Get REAL SERVICE.

The All-Gas Kitchen

is a product of modern progressiveness. It is the kitchen where coal never enters—where ashes and soot are never seen.

Architects, builders and the public know that gas is the cheapest, cleanest, most reliable kitchen fuel.

In the up-to-date residences being constructed, the house heating system is extended to the kitchen and there is no coal range.

It's easier to sell or rent a house with an All-Gas Kitchen. The modern housewife demands it.

THE UNITED GAS IMPROVEMENT CO.

electric lighting, maple floors. Owners have received bids.

or any subsequent offense shall be sentenced to pay a fine of not less than two hundred dollars nor more than five hundred dollars or to undergo an imprisonment in the county jail of not more than one year, either or both, at the discretion of the court.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

Pursuant to its policy of rounding out the structural steel business, the Bethlehem Steel Company has decided to build an 18-inch and 12-inch mill to augment the structural shapes rolled on the Bethlehem shape mill and the 28-inch structural mill.

The cost of the extension and improvements outlined above will be in the neighborhood of \$2,500,000.

J. Ernest Richards has been elected president of the American Pipe and Construction Company, succeeding Joseph S. Keen, Jr., who has resigned, George M. Bunting also resigning as vice-president.

The J. G. Brill Company has unfilled orders amounting to nearly \$4,000,000. Last February unfilled orders amounted to \$4,765,000. Work on export orders has been nearly completed and domestic business is expected to make up the bulk of the company's business this year.

ANCIENT SKYSCRAPERS.

In the days of Solomon there were buildings ten stories high; one rabbi tells of climbing 100 feet to his room; Herodotus says there were houses in Babylon four stories high, and Greek historians report many houses in ancient Tyre ten stories high. Athens had a building law limiting the height of buildings for residences to ten stories.

About the year 325 A. D., when Constantine the Roman Emperor, determined to establish his capital on the Golden Horn, he built a wall across the peninsula as the limits of his city and the dividing line between city and country taxes. Speculators rushed in and bought up land, raising real estate prices over 300 per cent. within a year.

High buildings were the logical outcome of this condition, and the capitalists sent to

Rome for architects who could design higher buildings, with the result that in ten years the new capital rivaled Rome in this regard.

Constantine, finding the view of the city and bay obstructed by these higher structures before he had completed his palace, says an exchange, issued an edict forbidding buildings more than 100 feet high.

A wall went up from the speculators, but the tops of the buildings had to come off, and it is recorded that one block lost the four stories, which would indicate that there were buildings from 125 feet to 135 feet.

It is recited that one Apothagos built a row of houses between the royal palace and the sea. They were of stone and brick as required by law and within the required limits of 100 feet, but on top of this he built frame structures of three stories. The royal "inspector of buildings?" ordered these frame superstructures to be removed, but Apothagos, claiming it was only a temporary structure for housing his workmen while they completed the building, went into court with it. After ten years of litigation, the superstructures were torn down, but all this time royalty was much offended by the buildings standing between it and the sea.

THE THINKER.

Back of the beating hammer
By which the steel is wrought,
Back of the workshop's clamor
The seeker may find the Thought;
The thought that is ever Master
Of iron and steam and steel,
That rises above disaster
And tramples it under heel.

The drudge may fret and tinker,
Or labor with lusty blows,
But back of him stands the Thinker,
The clear-eyed man who knows;
For into each plough or sabre,
Each piece and part and whole,
Must go the brains of labor,
Which gives the work a soul.

Back of the motor's humming,
Back of the bells that sing,
Back of the hammer's drumming,
Back of the cranes that swing,
There is the Eye which scans them,
Watching through stress and strain,
There is the Mind which plans them—
Back of the brawn, the Brain.

Might of the roaring boiler,
Force of the engine's thrust,
Strength of the sweating toiler,
Greatly in these we trust.
But back of them stands the schemer,
The Thinker who drives things through,
Back of the job, the Dreamer
Who's making the dream come true.

VIRTUE OF WALL BOARD IN ITS MANY USES.

Combines the Labor and Material of Lath and Plaster Without Dirt and Trouble.

In connection with the interior finish of a building it is well to consider the advantages offered by wall boards in place of the regular lath and plaster. Because of the dirt and inconvenience of plaster work, and also because it requires more or less favorable weather conditions in which to dry out, manufacturers have investigated numerous other materials to take its place. Among these are plaster board, composition ceilings and various combinations of wood fiber, paper stock, asphaltum, asbestos and felt.

The advantages claimed for these wall boards are that they combine the labor and material of lathing and plastering, that they can be put up regardless of weather conditions, which speeds construction, especially during the winter months, that they are fire-resistant, nonconductors and sound-deadeners, and skilled mechanics are not required to execute a good job, as in the case of plaster work. Wall paper, paint, burlap or any of the regular forms of decoration may be applied to them, the same as for plaster, and the more reliable brands are guaranteed not to warp, buckle or deteriorate with age.

These materials are especially desirable for bungalows, garages, frame structures, temporary offices and farm buildings, though they are also used in many of the largest stores, hotels and institutions. They are usually made in sheets thirty-two and forty-eight inches wide, to take the width of two or three studs spaced on sixteen-inch centers, and any length up to about 120 inches. They are cut with an ordinary saw, knife or chisel, and are easy to handle because of their flexibility. Most of them have a thickness of three-sixteenths of an inch, and about the same rigidity as wood. The average cost per square foot is about the same as lumber, which represents a considerable saving over lath and plaster.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

LITHOFORM

A Positive Primer
FOR

Holding Paint to Galvanized Iron

LITHOFORM contains no oils, varnishes, pigments or volatile solvents. It is a thin, non volatile liquid, its covering properties greatly exceed that of a paint or varnish. One gallon will cover from 1500 to 2000 square feet. The cost per square foot for material is very small, and requires no "brushing out" to produce an even coat, the time taken to apply LITHOFORM is much less than that required to apply a paint. The cost therefore of treating a surface with LITHOFORM is much less than painting it.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXII
Number 17

PHILADELPHIA
April 25, 1917

As The Editor Sees It

At the regular weekly luncheon at the Philadelphia Master Builders' Exchange the other day Major J. C. Baker, United States Engineer, urged in an address the enlistment in a regiment of engineers which is to be raised in this city, of builders, architects and building material men.

Under date of February 21, President Mauran, of the American Institute of Architects, addressed a letter to President Wilson pointing out special fields of service in which, by virtue of his training, the architect would be of help to his country in time of war.

President Mauran's letter is as follows:

ST. LOUIS, MISSOURI, February 21, 1917.
THE PRESIDENT,

The White House,
Washington, D. C.

Dear Mr. President: At the time when the Engineering Societies tendered to the Government of the United States, through you, their service in investigating Industrial Preparedness, the American Institute of Architects shared the impulse to place its resources at the country's service.

Rather than act, however, on the impulse in offering indeterminate services, we have postponed our offer until investigation revealed a tangible field of effort for which our special training peculiarly adapts us.

In enclosing herewith a copy of the Report made by the Special Committee charged with the investigation which closes with the recommendation that the President of the Institute be authorized to offer the services of the Institute to the President of the United States, and in extending that offer I beg to quote from the Report the following suggestive paragraph:

"A member of the American Institute has for more than a year been in charge

of the design and construction of all military hospitals in France, from the temporary unit near the battle-front to the permanent hospital in the rear. Other members, of the Institute have made themselves invaluable at the volunteer encampments at Plattsburg and elsewhere in this country, where their special training has peculiarly fitted them for the planning of camp-sites, sanitation, etc., and for reconnaissance work, topographical sketching and map-making."

While awaiting your pleasure the Institute will proceed to form a permanent Central Committee, which will have authority to organize subcommittees among the forty Chapters throughout the country.

Very respectfully,

(Signed) JOHN LAWRENCE MAURAN,
President.

* * *

IN the same number of the *Journal of the American Institute of Architects*, to which we are indebted for this letter, there appears a very interesting letter from Mr. Burk Fenner, architect, detailing his experience at Plattsburg.

From this letter we quote the following:

Military surveying is done by pacing and compass bearings primarily. I am not going into intersection and resection, contouring, slopes, clinometer and slope-board work, but you start with a sketch-board in one hand, a compass in the other, a pencil between your teeth, and a scale any place. I shall never forget when I was first dropped in a field with hills, ravines, a stream running through it with patches of cultivated fields and a winding road at one side, and my Captain said, "I'll send for you at four; 5 per cent. accuracy will do." When I remarked that I could do more accurate

work with instruments and longer time he replied, "In war, 100 per cent. accuracy and two hours late and we're all dead. Go to it."

Any architect or draughtsman should be able, after some practice, to make road and position sketches; it takes, of course, some little time to learn all military indications, and what is of great importance about visibility problems, arriving at positions without being seen, and occupying artillery positions defiladed from the enemy, all from observance of the contour lines on maps. However, to proceed to my work, I managed to successfully lay out the camps, though attending drills, and company work as far as possible. I had not a single evening or Sunday free as the others did. Owing, I suppose, to my familiarity with the camp-sites, I was then relieved from my company and made First Sergeant in charge of headquarters, war college, field artillery, hospitals and band. I was ordered to go to Quartermaster stores and draw tentage, had one hundred and one things charged to me, and was given two squads of regulars, and four war-college negroes as a command, and four 1½ ton motor-trucks.

* * *

WRITING generally on the subject of the possibilities that exist in the military life for the man with architectural training Mr. Fenner remarks:

Now as to what an architect can do for his country: First of all his training should give him proficiency in two particular things; military topography, which is of the utmost importance in reconnaissance, and outpost work. Geological Surveys are practically 1 inch to the mile. We shall always need innumerable sketches 3 inches to the mile or greater, and need them every day as we proceed or fall back. The sketches I

**DRAWING

**BLUE
PRINTS**

made were 1 inch equals 100 yards.

The second branch is engineering, which includes buildings, barracks, warehouses, earth and concrete works, and lines of communication. The other branch—field-works—includes demolitions. This takes in field defences, bridges, clearances, and pontoon work, all of which is relevant to our profession. A practical problem to be solved on the ground. That is our every-day work, is it not? Instead of making plans for circulation, we must block it, and find vistas for our fire but not for that of the enemy.

One of the greatest assets the architect has in war is imagination. It is laid down by the authorities that "War is an art and not a science." Tactics is logic, tempered with imagination. Strategy is imagination tempered with common-sense. I believe no profession develops these qualities as does ours. Who were the great military engineers of history? Michael Angelo, Leonardo da Vinci, Benvenuto Cellini, and many other of the world's great architects.

It will be seen that the architect has the adaptability to make himself a very important factor in the military scheme of things. And if the war, now under way, should develop into the long and tedious struggle that some of the military experts predict, we have no doubt that new fields of military usefulness will suggest themselves, fields in which the

trained capabilities of the practical architect will enable him to be of particular and unique service to his country.

That the builder and the material man will find also a place of importance in the organization of big military offensives no one with even the most rudimentary knowledge of what modern warfare entails may presume to doubt. Not that it is to be expected that any wholesale transfer of the civil talent in the lines named may be made or is indeed contemplated.

AS President Wilson, with his usual sanity of view has pointed out, men may in many instances be of as vital help to the government in prosecuting the routine and necessary tasks at home as in the first-line trenches.

We simply essay to point out in this little hit-and-miss chat on the subject that granted the necessary degree of patriotic fervor and the adventurous spirit, the architect, the builder and the material man may prove of very real and exceptional value in the military organization.

It may be of some interest to note in this connection that the President of the Royal Institute of British Architects, in his recent annual address referred to the failure of the British government properly to utilize the services of the architectural profession in Great Britain.

New York, and the Executive Mansion at Harrisburg.

The annual report of the Bureau of Buildings of Manhattan Borough shows that New York fairly outdid itself in the matter of building last year. Plans filed for 1916 provided for the expenditure of 82 per cent. more capital than the preceding year. The total for 1916 was \$134,078,044, about \$20,000,000 of which was for remodeled buildings. The average cost of a building in Manhattan Borough in 1916 was \$203,350, as against \$132,213 in 1915.

Warren Webster & Co., Camden, N. J., has elected Frank H. Stevens a director of the company. Mr. Stevens has been assistant treasurer and managing buyer of the company for a number of years.

American Radiator Company's Berlin branch, known as the National Radiator Gesellschaft, has been notified by the German authorities that August Hennig, who was sent to Berlin after the European war started, to fill a vacancy on the Berlin staff, caused by the mobilization of the German employees, will not be allowed to leave Germany during the course of the war.

The Philadelphia Chamber of Commerce has recorded its opposition to House Bill 922 now before the State Legislature, which proposes an increase in the pilotage charges for the port of Philadelphia. The Chamber has also protested against the passage of House Bill 142, which provides for the examination, licensure and registration of persons, co-partnerships, associations or corporations engaged in the business of electrical construction in cities of the second and third class.

These protests have been forwarded to Governor Brumbaugh, to Lieutenant-Governor McClain, as President of the Senate, and to Speaker Baldwin, of the House of Representatives, as well as to Representative Frederick J. Beyer, of Philadelphia, chairman of the House Committee on Judiciary General. The protest against the pilotage charge bill points out that the ten per cent. increase proposed is discriminatory against the port of Philadelphia in that it would make the rates for pilotage higher than those charged for similar service at all other ports along the Atlantic Coast.

recently formed as a local branch of the World's Salesmanship Congress, which held its annual convention recently. 250 salesmen in Chicago have already joined the club.

Harrison W. Craver, chief librarian of the Carnegie Library of Pittsburgh since 1908, has tendered his resignation to accept a position as director of the library of the United Engineering Societies of New York. The United Engineering Societies' library is now believed to be the largest engineering library in the world, with approximately 150,000 volumes on technological subjects on its shelves.

F. A. Clegg, president of F. A. Clegg & Co., Louisville, Ky., heating and ventilating engineers and contractors, has been elected treasurer of the Louisville Builders' Exchange.

Samuel Huckel, Jr., of the architectural firm of Watson & Huckel, 1211 Walnut street, died at the University Hospital. He had been ill for several months. Mr. Huckel was 59 years old. Mr. Huckel designed the Manufacturers' Club Building, the Odd Fellows' Temple, the former Grand Central Station in

Atlantic Radiator Company, Huntington, Pa., at its recent annual meeting in Wilmington, elected the following directors: Richard C. Schofer, Joseph Baneroft, E. M. C. Africa, A. C. Stein and Howard T. Gates. Richard C. Schwoerer was re-elected president and treasurer; Howard T. Gates was elected vice-president and secretary and was also appointed general manager. Mr. Gates reported a successful year and was given a rising vote of thanks for his management of the business.

EDITORIAL NOTES

George R. Stearns, of the architectural and engineering firm of Stearns & Castor, recently dissolved, announces that a new partnership has been formed under the name of Stearns, Woodnutt & Schmoll, with offices in the Stephen Girard Building, Philadelphia and 150 West Fourth street, Williamsport, Pa.

The second competition for figures for the decoration of the Plainfield (N. J.) Municipal Building will be held by the Joint Committee of the Beaux-Arts Institute of Design and the National Sculpture Society. Information may be obtained from the Beaux-Arts Institute of Design, 257 West Fifty-seventh street, New York City.

New Jersey's Zoning Bill is awaiting the signature of the Governor, having passed both the Senate and the Assembly. The proposed law will place all future building operations in cities of the first class under municipal control.

W. H. Hill, vice-president of the American Radiator Company, Chicago, Ill., was elected president of the Chicago Salesmanship Club,

COLORING CONCRETE

Monotony of concrete construction may often be diversified and more ornamental effects easily secured by the application of simple pigments to the cement before mixing. Permanency is an important consideration for this work, and a number of the best colors suitable for this character of work were recently enumerated in a bulletin on cement stucco issued by the Association of Portland Cement Manufacturers. The quantities recommended will give a light shade of the desired color. Where a medium dark shade is desirable double the quantity of pigment should be used. The coloring matter should be thoroughly mixed with the sand until a

uniform color results. This is then mixed with the cement. Blacks are usually safe colors, but it is better to avoid experiments with cheap and inferior colors. The carbon blacks are preferable to lampblacks, because they do not have the same tendency to float to the top during mixing. Ultramarine blue, if of good quality, will hold its color for a number of years, and generally possesses the virtue of fading out evenly. This color cannot be classed as permanent as can black, brown and ochre. Green is an unsatisfactory color to experiment with. Commercially, there is no green cement color on the market that will not fade when mixed with cement and exposed to light and weather.

Colors required.

Grays, blue-black and black.....
Blue shade
Brownish-red to dull brick red.....
Bright red to vermilion.....
Red sandstone to purplish-red.....
Brown to reddish-brown.....
Buff, colonial tint, and yellow.....

Pigments used.

Germantown Lambblack ½
Carbon Black ½
Black Oxide or Manganese..... 1
Ultramarine Blue 5
Red Oxide or Iron 5
Mineral Turkey Red..... 5
Indian Red 5
Metallic Brown (Oxide)..... 5
Yellow Ochre

Pound of
Pigment for
Each Bag of
Cement.

BUILDING MATERIAL FOR EUROPE.

According to a financial authority, one reason for the present high cost of building materials in all parts of the country is ascribed to the options being taken on supplies in gigantic quantities by companies who plan to ship buildings by the millions of dollars' worth into Europe as soon as the war stops.

At the present time some of the companies are well enough equipped to take orders for factory buildings as large as 90 by 300 feet, and to supply in the same shipment enough dwellings to house the necessary hands to operate the mills. Inquiries have been sent here from England and Russia and France in the last month, seeking to ascertain the per cubic foot cost of American standard shaped industrial buildings and quickly assembled houses for the employees.

According to specifications received from France, "prices must include complete mill construction ready for setting machinery on floors within thirty days from arrival of material on site, quotations to be free on board, New York, and cover purchaser into the summer of 1918."

One New York company has already made shipments of houses of this sort into South America, and is taking on capacity to meet the requirements of an export business in all kinds of basic building materials which seem sure to develop upon the closing of hostilities. —"Stone," New York.

WINDOWS.

By Dr. E. Vernon Hill.

In this paper Dr. Hill reviewed the history of window design and construction and showed that windows were in use in ancient Egypt, at least on the second floors of buildings, but without glass or other protection. That they were also used by the Greeks and Romans is known to be a fact. Instead of glass it was customary to use pieces of colored glass. Dr. Hill then took up modern window construction from the standpoints of first cost, care and upkeep, loss of wall space, admission of flies and other insects, admission of dirt, weakening of walls and injury to building, entrance for burglars, increase of heat loss, interference with mechanical ventilation, increased liability to fire and fire panic and nuisance from noise. Under the last heading he showed that in office buildings in the congested districts of large cities, the noise from electric cars, passing trucks, etc., entirely prevent the use of windows for ventilation on the first, second or even third floors. This is also a serious objection in the cases of hospitals and schools. Dr. Hill spoke at length of the window requirements of factories and workshops, this part of the paper being accompanied by illustrations of typical designs. He stated that pending further development of artificial illumination, natural light for these buildings is to be preferred. He predicted that in the years to come all work-rooms, salesrooms and rooms open to the pub-

lic below the second story above grade would be compelled to be properly ventilated and the air washed and purified.

SOME MORE ADVERTISING "DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

SURE.

Stick to your work, forget the mob.

Avoid the discontented throng;

For, if you're always on the job

Success is sure to come along.

One way to escape the income tax is to quit advertising and do less business.

Milton W. Franklin has resigned his position as president of the C. and C. Electric Company, New York, to accept an engagement with E. F. Houghton & Co., Philadelphia, as consulting engineer for the Houghton line. This company not only manufactures the well-known Houghton line of heating specialties, including the Houghton American system of heat control, but is also an extensive manufacturer of lubricating and other oils. Mr. Franklin's activities will cover all of the company's products. He will make his headquarters at the company's plant in Philadelphia.

CLEANING UP THE NATION

An Effort to Lessen Hazard by Extending This Campaign to Every Section.

Letters are being written to the Governors and Fire Marshals of the different States, and to the Mayors, Fire Chiefs, Health Officers and Chambers of Commerce in several hundred of the leading American cities, urging that the first week in May (which this year begins upon April 30th), be designated and observed generally as a spring "Clean-up Week."

This is a time of national crisis, when every effort to reduce public hazard becomes a patriotic duty. However, such efforts pay abundant dividends even under normal conditions. For example, Mr. J. J. Conway, chairman of Cincinnati's "Clean-up and Paint Up" campaign, writes to the National Board of Fire Underwriters:

"Cincinnati's clean-up campaigns have been of great value to the people of Cincinnati. Prior to the first campaign three years ago, the fire loss totaled \$1,340,000, and this was reduced to \$370,537 in 1915, and to approximately the same figure in 1916."

Similarly, the City of Decatur, Illinois, reports a fire loss of \$164,010 for 1915, before the institution of the local clean-up campaign, and of only \$63,457 for 1916, following this effort. As one of the features of Decatur's campaign, more than one hundred and fifty merchants provided themselves with metal receptacles for the storage of waste paper and rubbish.

The Chamber of Commerce of Rochester, New York, states that the city's 1916 fire loss showed a reduction of 40 per cent. over the figures for 1915, and credits a large part of this to the result of a clean-up campaign. Mayors, Fire Chiefs, and Health Officers in a number of cities, as well as the Fire Marshals of Pennsylvania, Illinois, Michigan, Ohio, Wisconsin, Minnesota and several other States, are already moving actively in the matter. On the other hand, the greater part of the United States has not yet awakened to this necessity.

Spring is a time of peculiar fire menace because of the accumulated litter of the winter months. The Georgia Fire Prevention Society has published statistics showing that all of the conflagrations in the Southern cities during the past quarter of a century have occurred between February 25th and May 3rd, and it is well known that the \$350,000,000 conflagration in San Francisco was in the month of April. While this latter was caused by an earthquake, most of the loss was due to the bad condition of the city. If a spring "Clean-up" campaign could be established as a national institution, for the first week in May of each year, it would save millions of dollars of the national wealth, which is annually destroyed through unnecessary fires. It also would be a most important health measure, since dirt and debris breed disease as well as conflagration.

One word of special precaution is necessary; this refers to the storage of waste paper. Following the suggestion of the Federal Government that people should save waste paper as a means of meeting the serious shortage in paper stock, thousands of school children began to collect paper and to store it in school basements, thereby creating a hazard. It is desirable that waste paper should be conserved, but a safe place of storage should be provided. Such storage should never take place in schools or dwellings. It is well to remember that paper is less likely to burn when tightly folded and piled than when thrown into a loose heap. It should be disposed of as frequently as possible so that large quantities may not accumulate. This is another case in which individual carelessness is the greatest fire hazard.

GENERAL ELECTRIC SPREADS OUT

It is a good sign when one of the largest manufacturing companies in the country, having no plant in Philadelphia, decides to transfer a portion of it to this city—a good sign for Philadelphia and for the company as well. This action was recently taken by the General Electric Company, of Schenectady, New York, who heretofore have had only offices and warehouses in Philadelphia and did no manufacturing here.

Takes Over New Building.

The company is now completing the building situated on the block bounded by Seventh, Willow, Marshall and Noble streets. This block originally contained thirty-eight residences, and has a frontage of 175 feet on Willow and Noble streets, 263 feet on Seventh street and 281 feet on Marshall street, and covers a ground area of 48,000 square feet.

Used for Manufacturing.

The new building, which covers nearly half of the entire block, and which is now rapidly approaching completion, is one of the "day-light throughout" type, and will contain 125,000 square feet of floor area. It will be strictly modern in every detail, being of heavy concrete construction, six stories high, sprinkled throughout, and with passenger and freight elevators sufficient to meet the demands. The company will have about 1,200 employees in this building and will use it exclusively as a manufacturing plant.

To Double Size of Plant.

It is proposed that shortly after the southern half of this block is improved, work will be started on the northern half of the block for the erection of a similar improvement. The investment of the General Electric Company in this one block will represent upwards of a million dollars, and the best working facilities for employees will be possible on account of the modern well-lighted and well-equipped plant.

Site Has Railroad Siding.

The development of this block is another illustration of the importance of the railroad

siding. This location was selected on account of the railroad facilities, and provisions have been made for a private siding, which will accommodate four or five cars at one time. Arrangements have been made for a siding to be put exclusively on the General Electric Company ground, thus making it strictly private.

AMERICAN-MADE MASTIC TAKING PLACE OF IMPORTED PRODUCT.

"On account of the war" has become a household phrase in America. It is used to explain advances in the prices of commodities as well as our inability to get certain things at any price.

But it is an ill wind that blows nobody good, and one advantage of the situation has been the development of a number of industries that will hereafter be independent of foreign sources of supply. We have also found that custom or habit, rather than economic necessity, has been responsible for considerable foreign trade.

The truth of the latter statement is clearly shown by our former large importations of rock mastic. It required the present cessation of imports growing out of the war to demonstrate that we are not only able to produce mastic in large quantities, but of very superior quality. For a long time we imported from Germany—and in lesser quantities from Switzerland and Italy—many tons of rock mastic. But when importations suddenly ceased, architects and engineers found that the situation was really advantageous in so far as this particular material is concerned. They were at first concerned because mastic is used for so many purposes that to be deprived of it without being able to find a substitute would be a serious matter. But they know now that they cannot only get a more uniform material than the rock mastic, but that it has been available for some time. That this change in the attitude of architects and engineers is important is shown by the extensive use of the material. It goes into the floors of storage plants, abattoirs, breweries, hospitals, bakeries, railroad stations and shops. It is especially valuable as a waterproofing material, being used in subways, bridges, piers and tunnels. The manufacture and use of the American product are already standardized. More than 75,000 square feet were used in the New York Municipal Building.

A curious fact is that while it was apparent we had a superior product it is only recently that we discovered why it is better. Chemical research disclosed the fact that in the Trinidad lake asphalt, which is the bitumen used in the American-made mastic, nature had supplied exactly the percentage of fine material content or filler required to obtain the best results. Analyses show no variation, whereas in the case of rock asphalt the filler and bitumen content varies from fat to lean. The Trinidad mastic has been developed largely by the experts of one of our large companies.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.
